

# **Programme and Course Structure**

# Sharda School of Basic Science and Research Department of Mathematics

**B.Sc.** (Hons./ Hons. With Research)

Mathematics

**Programme Code: SBR0302** 

#### Vision, Mission, and Core Values of the University

#### Vision of the University

To serve the society by being a global University of higher learning in pursuit of academic excellence, innovation and nurturing entrepreneurship.

#### Mission of the University

- M1. Transformative educational experience.
- M2. Enrichment of educational initiatives that encourage global outlook.
- M3. Develop research, support disruptive innovations, and accelerate entrepreneurship.
- M4. Seeking beyond boundaries.

**Core Values** 

- 1. Integrity
- 2. Leadership
- 3. Diversity
- 4. Community

#### Vision and Mission of School

#### Vision of the School

Achieving excellence in the realm of science to address the challenges of evolving society.

#### **Mission of the School**

- 1. Equip the students with knowledge and skills.
- 2. Capacity building by providing academic flexibility to student and Faculty members.
- 3. To establish center of excellence for innovative research.
- 4. Address the deficiencies of the society pertaining to environment
- 5. To strengthen academic- industry collaboration for better. Employability.
- 6. Developing a culture for continued betterment in all facets of life.

#### **Core Values**

- 1. Integrity
- 2. Leadership
- 3. Diversity
- 4. Community

#### Vision and Mission of the Department of Mathematics

#### Vision of the Department

To become a globally recognized destination for education in applied mathematics and research.

#### Mission of the Department

- 1. To develop mathematical skills in students and make them employable across a wide range of professions and promote interest in research.
- 2. To develop entrepreneurial skills in students to serve the society at large.
- 3. To develop skills for the applications of mathematics in the various fields.

#### **Core Values**

- 1. Integrity
- 2. Leadership
- 3. Diversity
- 4. Community

#### B. Sc. (Hons. / Hons. With Research) Mathematics

#### **Programme Educational Objectives (PEOs)**

- **PEO1.** Provide a solid foundation in mathematics, give a flavour of some very advanced modern branches of mathematics, and develop interdisciplinary skills.
- **PEO2.** Develop critical thinking, creative thinking, and self-confidence for eventual success in career
- **PEO3.** To prepare the students to communicate mathematical ideas effectively and develop their ability to collaborate both intellectually and creatively in diverse contexts.
- **PEO4.** Rewarding careers in private and government sectors such as Education, Industry, Banks, MNCs, and pursue higher studies.

#### **Programme Outcomes**

The graduates should be able to demonstrate the capability to

- **PO1.** Complex Problem Solving: Solve different kinds of problems in familiar and non-familiar contexts and apply the learning to real-life situations.
- **PO2.** Critical Thinking: Analyze and synthesize data from a variety of sources and draw valid conclusions and support them with evidence and examples.
- **PO3.** Creativity: Demonstrate the ability to think 'out of the box' and generate solutions to complex problems in unfamiliar contexts by applying concepts of multidisciplinary and interdisciplinary.
- **PO4.** Analytical reasoning/thinking: Evaluate the reliability and relevance of evidence.
- **PO5.** Research-related skills: Demonstrate the ability to acquire the understanding of basic research ethics and skills in practicing/doing ethics in the field/ in personal research work, regardless of the funding authority or field of study.
- **PO6.** Communication Skills: Demonstrate the skills that enable them to express thoughts and ideas effectively in writing and orally and communicate with others using appropriate media.
- **PO7.** Coordinating/collaborating with others: Demonstrate the ability to work effectively and respectfully with diverse teams using management skills to guide people to the right destination.
- **PO8.** Digital and technological skills: Demonstrate the capability to access, evaluate, and use a variety of relevant information sources, and use appropriate software for analysis of data.
- **PO9.** Value Inculcation: Instill integrity and identify ethical issues related to work, and follow ethical practices with or understand the perspective, experiences, or points of view of another individual or group, and to identify and understand other people's emotions.

**PO10. Sustainability Growth:** Demonstrate the capability to lead a diverse team or individual to accomplish and participate in community-engaged services/ activities for promoting the well-being of society to mitigating the effects of environmental degradation, climate change, and pollution.

**PO11. Multidisciplinary Life-long learning:** Comprehensive knowledge and coherent understanding of the chosen disciplinary/interdisciplinary areas of study in a broad multidisciplinary context by inculcating a healthy attitude to be a lifelong learner.

#### Programme Specific Outcomes of B.Sc. (Hons. / Hons. With Research) Mathematics

- **PSO1.** Select and use appropriate mathematical formulae or techniques in order to process the information and draw the relevant conclusion.
- **PSO2.** Develop the ability to reflect on problems that are quite significant in the field of pure mathematics.
- **PSO3.** Apply programming knowledge gained from MATLAB, Python, R, Excel through applied mathematics, and statistics as per the need of industry.

#### **Mapping of PEOs with Mission Statements**

PEO Statements	School Mission1	School Mission2	School Mission3	School Mission4	School Mission5	School Mission6
PEO1	3	2	3	1	2	3
PEO2	3	2	3	1	2	3
PEO3	3	3	3	3	3	3
PEO4	3	2	3	1	3	3

#### **Mapping of Programme Outcomes Vs Programme Educational Objectives**

	PEO1	PEO2	PEO3	PEO4
PO1	3	3	3	2
PO2	3	3	3	2
PO3	3	3	3	2
PO4	3	2	3	2
PO5	2	3	2	3
PO6	3	3	3	2
PO7	1	2	1	3
PO8	2	2	1	3
PO9	2	2	2	3
PO10	2	2	2	3
PO11	3	2	2	1
PSO1	3	3	2	2
PSO2	2	3	1	2
PSO3	3	2	3	2

<sup>1.</sup> Slight (Low) 2. Moderate (Medium) 3. Substantial (High)

#### Structure of FY UG Programme

The Semester wise and Broad Course Category-wise distribution of credits of the Undergraduate Programme

Semester	Discipline Core Major (60/80 Credits)	Minor (24/32 Credits)	Inter/Multi - disciplinary courses (09 Credits)	Ability Enhancement courses (AEC) (08 Credits)	Skill Enhancement Courses (SEC) (09 Credits)	Common Value Added Courses (06-08 Credits)	Summer Internship (02-04 Credits)	Re s e a	Total Credits (120/160)	
ı	Th-1(2)+Pract-1(2) or Th-1(3) + Pract-1(1) & Th-1(4) [8]	1(3)	1(2)	ARP(2)	1(3)	VAC1 (2)		,	40	First Minor Core is fixed course for each school.  VAC Courses include -Environment -Indian Knowledge System
II	Th-1(2)+Pract-1(2) or Th-1(3) + Pract-1(1) & Th-1(4) [8]	1 (3)	[3]	ARP(2)	1(3)	VAC2 (2) VAC3 (2)				-Mulya Pravah VAC/SEC/Multidis/AEC can be taken from NPTEL
	Students exit the programme after securing 4		ne relevant Discipline / Subject from skill - based courses ear			rses offered during summer	r term or internship / Apprenticeship	in addition to 6		
	Th-1(3)+Pract-1(2)	T	 	I	<u> </u>					
III	or Th-1(4) + Pract-1(1) & Th-1(5)  [10]	1(3)	1(2)	Th-1(2) Indian Language	1(3)			RBL1-1(0)	80	**Consent to be taken from Students for Apprenticeship by floating name of Industries  Mandatory visit to Abhivyakti Wellness Clinic as Audit
IV	Th-2(3)+Pract-2(2) or	1(3)	[2]	Community Connect-				RBL2 -1(1)	80	Course to be taken in any semester (Except 1st & final sem.)
	Th-2(4) + Pract-1(2) & Th-1(4) [14]	[3]		1(2)				[1]		
	Students exit the programme after securing	80 credits will be awarded UG Diploma in th	e relevant Discipline / Subjec	t provided they secure add	itional 4 credits in skill based vocat	ional courses offered during	g first year or second year summer te	erm or Internship		
V	Th-2(4) & Th-3(3)+Pract-3(1) or Th-4(4) + Pract-2(2) [20]							RBL3 -1(0) (Audit)	120	
VI	in the rice and participation of the participation	3(4) [12]	1(3) [3] or Th-1(2) + Pract-1(1)	ARP (2)/Foeign Language(2) [2]			Industry Connect-1(2)/ Summer Internship-1(2) [2]	RBL4-1(1)	120	3- Year UG Degree inclusive of optional Apprenticeship
OR VI		Students who want to undertake 3-ye	ar UG programme will be aw	**APPRENTICESHIP [20] arded UG Degree in the rel		uring 120 credits			20	
VII	Th-4(4)+Pract-4(1) or Th-4(4) or Th-4(4) + Pract-2(2) [20]	1(4)*							160	*ONLY for students going for Apprenticeship & requires Minor with Major Degree
VIII		2(4)	Th-2( <mark>4)</mark> or Th-2(3)+Pract-2(1)					Project (4)		4- Year UG Degree (Honours) inclusive of optional Apprenticeship
OR VIII		[0]	[8]	**APPRENTICESHIP [20]				[4]	20	
				OR						
VII	Th-3(4)+Pract-4(1) or Th-4(4) or Th-3(4) + Pract-2(2) [16]	1(4)						Research Project - (12)  03 Credits	160	4- Year UG Degree
VIII	Th-1(3) + Pract-1(1) or Th- 1(2) + Pract-1(2) [4]	1(4)						evaluation will be done in VII Semester &	100	(Honours with Research)
		Students wil be awarded UG De	gree (Honours) with Researc	h in the relevant Discipline	/ Subject provided they secure min	ı. 160 credits		09 Credits

\*Credited Research Project/Dissertation: Students of B.Sc. Mathematics have the option to choose a research project/dissertation of worth 12 credits (However student has to take 23 credits courses including 3 credits project in 7<sup>th</sup> semester and 17 credits courses including 9 credits project in 8<sup>th</sup> semester). This can be undertaken for those who secure 75% and above marks in the first six semesters and wish to undertake research at the undergraduate level can choose a research stream in the fourth year. They should do a research project or dissertation under the guidance of a mathematics faculty member of the Sharda University. The students who secure 160 credits, including 12 credits from a research project/dissertation, are awarded B.Sc. (Hons. with Research) Mathematics.

#### **COURSE STRUCTURE**

Scho	ol: SSBSR	Batch: 2024-28									
	gramme: B.Sc.	Academic Year: 2024-25									
(Hor	is.) ich: Mathematics	Competon I									
	Course Code	MSM101									
2	Course Code  Course Title	Foundation Course in Mathematics									
3	Credits	4									
4	Contact Hours	<del></del>									
4	(L-T-P)	4-0-0									
	Course Status	CC									
5	Course Objective	1. To familiarize the students with basic concepts of matrices, det solving the system of linear equations.									
		2. To understand the basic concept of sets theory, co-ordinate geom	netry, complex								
		number and vector algebra.									
6	Course Outcomes	CO1: Explain the concept of matrices and solve systems of linear equivalent determinants. (K2,K3, K4) CO2: Explain the concept of complex numbers and calculate the nth complex numbers and illustrate the solutions of simple Polynomial ed K3, K4)	roots of								
		CO3: Memorize the basic of Cartesian coordinate system and use alg techniques to explain intercepts and explore equations of lines on the plane. (K1, K3, K4)	•								
		CO4: Describe and differentiate the symmetries from graphs of conic sec K1, K2)									
		CO5: Describe and use the concepts of set theory, relation and function $(K1,K2,K3)$	ons.								
		CO6: Explain the basic concepts of vector algebra and use to parallelogram and quadrilateral, Vector triple product.(K2,K3,K4)									
7	Course Description	This course is an introduction to the fundamental of Mathematics. objective of the course is to develop the basic understanding of lincomplex number, co-ordinate geometry, sets theory and vector algebraic control of the course is an introduction to the fundamental of Mathematics.	near algebra,								
8	Outline syllabus		CO Mapping								
	Unit 1	Matrices									
	A	Evaluation of determinants, Properties of determinants,	CO1								
	В	Matrices: types of matrices, addition, subtraction and multiplication of matrices, symmetric and skew symmetric matrix. Inverse of matrix.	CO1								
	С	Rank of a matrix, Consistency of system of equations, Characteristic equation, Cayley -Hamilton theorem.	CO1								
	Unit 2	Complex Numbers									
	A	Representation of complex number in Argand plane, Modulus and argument of complex number	CO2								
	В	Algebraic operations, De- Moivre's theorem	CO2								
	С	Nth root of complex number, Euler's formula	CO2								
	Unit 3	Co-ordinate geometry									
	A	Cartesian coordinate system, Distance between two points Equations of line in various forms	CO3								

В	Equation of circle in various forms, Equation of tangent and normal to the circle.	CO3, CO4
С	Equation of ellipse, parabola and hyperbola	CO3, CO4
Unit 4	Set Theory	
A	Definition of set, types of sets, Union and intersection of sets, Venn diagram, De-Morgan's law.	CO5
В	Relation and functions.	CO5
С	Composite function and inverse function.	CO5
Unit 5	Vector Algebra	
A	Addition and subtraction of vectors and their geometric application.	CO6
В	Scalar and vector product, their physical application, Projection of vector on another vector, area of triangle.	CO6
С	Area of parallelogram and quadrilateral, Vector triple product.	CO6
Mode of	Theory	
examination		
Weightage Distribution	CA:25%; ESE:75%

	gramme: B.Sc.	Academic Year: 2024-25						
(Ho								
1	Course Code	CMS102						
2	Course Title	Descriptive Statistics						
3	Credits	3						
4	Contact Hours (L-T-P)	3-0-0						
	Course Status	DSE						
5	Course Objective  1. To introduce basic statistical concepts, logics and analytical to and communicate quantitative data verbally, graphically, symbolical numerically.  2. To make students familiar with the concept of Probability and Statistical concepts, logics and analytical to and communicate quantitative data verbally, graphically, symbolical numerically.  2. To make students familiar with the concept of Probability and Statistical concepts, logics and analytical to and communicate quantitative data verbally, graphically, symbolical numerically.  2. To make students familiar with the concept of Probability and Statistical concepts, logics and analytical to and communicate quantitative data verbally, graphically, symbolical numerically.							
6	Course Outcomes  CO1: Describe the process and particular steps in designing studies, of analyzing data, interpreting and presenting results; and develop skills quantitative data using appropriatediagrams, tabulations and summaric CO2: Describe the properties of discrete and continuous distribution (K2).  CO3: Calculate the measures of central tendency and dispersion of describe the method used for analysis, including a discussion of disadvantages, and necessary assumptions. (K2, K3)  CO4: Calculate and interpret the correlation between two vocalculate the simple linearregression equation for a set of data as basic assumptions behind regression analysis. (K2,K3).  CO5: Understand the line of best fit as a tool for summarizing a linear and predicting future observed values, develop the ability to mathematical argument in the context of probability. (K2, K5)  CO6: Develop the skills to interpret the results of statistical analysis.							
7	Course Description	This is an introductory course in statistics. Students are introducted fundamental concepts involved in using sample data to make infer populations. Included are the study of measures of central tendency and finite probability, statistical inferences from large and small san regression, and correlation.	rences about d dispersion,					
8	Outline syllabus		CO Mapping					
	Unit 1	Presentation of data	Mapping					
	A	Classification, tabulation, diagrammatic & graphical representation of groupeddata.	CO1					
	В	Frequency distributions, cumulative frequency distributions	CO1					
	С	Histogram, Ogives, frequency polygon, Tree and leaf diagram.	CO1					
	Unit 2	Descriptive statistics	CO2					
	A	Measures of central tendency – arithmetic mean, median, quartiles, mode, harmonic mean, geometric mean.	CO2					
	В	Their properties, merits, and demerits	CO2					
	С	Measures of dispersion, range, quartile deviation, mean deviation, standard deviation, and coefficient of variation.						
	Unit 3	Moments	CO3					

A	Moments, Skewness, Measures of skewness: Karl Pearson's coefficient ofskewness.	CO3
В	Quartile coefficient of skewness, Measure of skewness based on moments.	CO3
С	Kurtosis, measure of Kurtosis.	
Unit 4	Bi-variate data analysis	CO4
A	Bivariate data, principles of least squares, fitting of polynomial curves, and fitting of curves reducible to polynomial form.	CO4
В	Correlation: Spearman's rank correlation, Partial and Multiple Correlation (only two independent variables case).	CO4
С	Regression lines.	
Unit 5	Probability	CO5
A	Probability: Introduction, random experiment, outcomes, sample space, events, various definitions of probability, laws of total and compound probability.	CO5
В	Boole's inequality. Conditional probability, independence of events.	CO5
С	Bayes theorem and its applications in real life problmes.	CO6
Mode of examination	Theory	
Weightage Distribution	CA:25%; ESE:75%

	Objective	structures, control structures in C	
		<ul><li>2. Learning logic aptitude programming in c language</li><li>3. Developing software in c programming</li></ul>	
6	Course	Students will be able to:	
O	Outcomes	CO1: <b>Demonstrate</b> the algorithm, Pseudo-code and flowchar	rt for the
	Outcomes	given problem.	it for the
		CO2: <b>Develop</b> better understanding of basic concepts of C pr	ogramming.
		CO3: Create and implement logic using array and function.	8:g.
		CO4: Construct and implement the logic based on the conce	ot of
		strings and pointers.	
		CO5: Apply user-defined data types and I/O operations in file	<b>.</b>
		CO6: <b>Design</b> and develop solutions to real worldproblems us	sing C.
7	Course	Programming for problem solving gives the Understanding of C	
	Description	programming and implement code from flowchart or	
		algorithm	CO.
8	Outline syllabus		CO Mapping
	Unit 1	Logic Building	
	A	Flowchart: Elements, Identifying and	
		understanding input/ output, Branching and iteration in flowchart	CO1
		Algorithm design: Problem solving approach(top	GO1
	В	down/bottom up approach)	CO1
	С	Pseudo Code: Representation of different construct, writing	
		pseudo-code from algorithm	CO1
		and flowchart	
	Unit 2	Introduction to C Programming	
	A	Introduction to C programming language, Data types, Variables, Constants, Identifiers andkeywords, Storage classes	CO2, CO6
	В	Operators and expressions, Types of Statements: Assignment, Control, jumping.	CO2, CO6
	С	Control statements: Decisions, Loops, break, continue	CO2, CO6
	Unit 3	Arrays and Functions	
	A	Arrays: One dimensional and multi dimensionalarrays:	
		Declaration, Initialization and array	CO3, CO6
	D	manipulation (sorting, searching).	
	В	Functions: Definition, Declaration/Prototypingand Calling,	CO3, CO6
		Types of functions, Parameter passing: Call by value, Call by reference.	003,000
	1	passing. Can by varie, Can by reference.	

С	Passing and Returning Arrays from Functions, Recursive Functions.	CO3, CO6
Unit 4	Pre-processors and Pointers	
A	Pre-processors: Types, Directives, Pre- processors Operators (#,##,\), Macros: Types, Use, predefined Macros	CO4, CO6
В	Pointer: Introduction, declaration of pointervariables, Operations on pointers: Pointer arithmetic, Arrays and pointers, Dynamic memory allocation	CO4, CO6
С	String: Introduction, predefined string functions, Manipulation of text data, Command Line Arguments	CO4, CO6
Unit 5	User Defined Data Types and File Handling	
A	Structure and Unions: Introduction, Declaration, Difference, Application, Nested structure, self- referential structure, Array of structures, Passing structure in function.	CO5, CO6
В	Files: Introduction, concept of record, I/OStreaming and Buffering, Types of Files: Indexed file, sequential file and random file	CO5,CO6
С	Creating a data file, Opening and closing a datafile, Various I/O operations on data files: Storingdata or records in file, adding records, Retrieving, and updating Sequential file/random file.	CO5,CO6
Mode of examination	Theory

4	(L-T-P)	0-0-6	
	Course Status	SEC	
5	Course Objective	<ol> <li>To be able to enter, edit, and format data with ease using the interface.</li> <li>To do calculations on data, use formulae and functions. Utilize</li> </ol>	
_		automate selections and data searches.	1.1
6	Course Outcomes	CO1: How to operate essential navigational controls in Excel perform basic data entry with Excel spreadsheets and understand cell references.  CO2: Explain several formatting tools like font formatting, border number formatting, Excel styles, themes and printing options.  CO3: Build charts to represent data visually using Pie, column ar and modify chart elements.  CO4: Examine multiple sheets and workbooks to combine data, ma and perform calculations across multiple sources.  CO5: Decide ways to extract information and manipulate data to business requirements using text and date functions.  CO6: Create, manage and apply Named Ranges to enhance calculations.	the different is, alignment, ad line charts mage datasets fulfil specific
7	Course Description	In offices all throughout the world, spreadsheet software continues the most frequently used programs. A significant tool will be accemployability profile after you learn to use this software with assurday, there are millions of job postings in India alone that mention habilities. Digital skills contribute to higher income and better chances.	lded to your rance. Every naving Excel
8	Outline syllabus		CO Mapping
	Unit 1	Critical Core of Excel and Performing Calculations	
	A	Introduction, Taking Charge of Excel, Navigating and Selecting, View Options, Data Entry, Data Types, Editing and Deleting, Fill Handle, Copy and Paste, Templates.	CO1
	В	Formulas, Formulas in Context, Functions I: SUM and AUTOSUM.	CO1
	С	Functions II: AVERAGE, MIN and MAX, Absolute Cell References, Calculations across sheets.	CO1
	Unit 2	Formatting and Printing	
	A	Formatting, Borders, Alignment Tools, Format Painter, Number Formats, Styles and Themes.	CO2
	В	Managing Rows and Columns, Find and Replace, Filtering, Sorting, Conditional Formatting.	CO2
	С	Print Preview, Orientation, Margins and Scale, Page Breaks, Print Titles, Headers and Footers	CO2
	Unit 3	Charts	
	A	Basic Chart Types: Pie, Column and Line Charts.	CO3
	В	Move and Resize Charts, Change Chart Style & Type.	CO3
	С	Modify Chart Elements.	CO3C
	Unit 4	Working with Multiple Worksheets & Workbooks	

A	Multiple Worksheets, 3D Formulas, Linking Workbooks.	CO4
В	Consolidating by Position, Consolidating by Category (Reference).	CO4
С	Combining Text (CONCAT, &), Changing Text Case (UPPER, LOWER, PROPER).	CO4
Unit 5	Named Ranges	
A	Extracting Text (LEFT, MID, RIGHT), Finding Text (FIND),	CO5
В	Date Calculations (NOW, TODAY, YEARFRAC).	CO5
С	Introducing Named Ranges, Creating Named Ranges, Managing Named Ranges, Named Ranges in Formulas, Apply Names.	CO6

School	or sodok	Academic Year: 2024-25	
		Semester: I	-
1	Course Code	ARP101	
	Course Title		
2		Communicative English-1	
3	Credits	2	
4	Contact Hours	1-0-2	
	(L-T-P)		
5	Course	To minimize the linguistic barriers that emerges in varied socio-linguistic	
	Objective	environments through the use of English. Help students to understand	
		different accents and standardise their existing English. Guide the students	
		to hone the basic communication skills - listening, speaking, reading and	
		writing while also uplifting their perception of themselves, giving them	
		self-confidence and building positive attitude.	
6	Course	After completion of this course, students will be able to:	
	Outcomes	CO1: Develop a better understanding of advanced grammar rules and write	
		grammatically correct sentences	
		CO2: Acquire wide vocabulary and punctuation rules and learn strategies	
		for error-free communication.	
		CO3: Interpret texts, pictures and improve both reading and writing skills	
		which would help them in their academic as well as professional career	
		CO4: Comprehend language and improve speaking skills in academic and	
		social contexts	
		CO5: Develop, share and maximize new ideas with the concept of	
		brainstorming and the documentation of key critical thoughts articulated	
		towards preparing for a career based on their potentials and availability of	
		opportunities.	
		CO6:Function effectively in multi-disciplinary teams through the	
		knowledge of team work, Inter-personal relationships, conflict	
7	C	management and leadership quality	
7	Course	The course is designed to equip students, who are at a very basic level of	
	Description	language comprehension, to communicate and work with ease in varied	
		workplace environment. The course begins with basic grammar structure	
		and pronunciation patterns, leading up to apprehension of oneself through	
0		written and verbal expression as a first step towards greater employability.	
8	TI	Outline syllabus – ARP 101	
	Unit A	Sentence Structure	CO1
	Topic 1	Subject Verb Agreement	CO1, CO2
	Topic 2	Parts of speech	1002
-	Topic 3	Writing well-formed sentences	
	IInit D	Vasahulaw Duilding & Dunatuation	
	Unit B Topic 1	Vocabulary Building & Punctuation Homonyms/ homophones, Synonyms/Antonyms	CO1
	1 opic 1	Homonyms/ nomophones, synonyms/Amonyms	CO1, CO2
	Topic 2	Punctuation/ Spellings (Prefixes-suffixes/Unjumbled Words)	CO2
	1 Opic 2	1 unotuation/ Spennigs (Frenkes-surfikes/Onjunioled Words)	CO1,
	Topic 3	Conjunctions/Compound Sentences	CO2,
	1 opic 3	Conjunctions/Compound Sentences	CO1,
			CO2
	Unit C	Writing Skills	
	Topic 1	Picture Description – Student Group Activity	CO3
	Topic 2	Positive Thinking - Dead Poets Society-Full-length feature film -	CO3,
	1 opic 2	Paragraph Writing inculcating the positive attitude of a learner through the	CO2,
		movie   SWOT Analysis – Know yourself	CO2,
	Topic 3	Story Completion Exercise –Building positive attitude - The Man from	CO2,
	Tobic 3	Story Completion Exercise —Bunding positive attitude - The Mail Iron	CO2,

	Earth (Watching a Full length Feature Film)	CO3
Tomic 4	Digital Literacy   Effective Use of Social Media	CO3
Topic 4		CO3
Unit D	Speaking Skill	
Topic 1	Self-introduction/Greeting/Meeting people – Self branding	CO4
Topic 2	Describing people and situations - To Sir With Love (Watching a Full length Feature Film)	CO4
Topic 3	Dialogues/conversations (Situation based Role Plays)	CO4
Unit E	Professional Skills   Career Skills	
Topic 1	Exploring Career Opportunities	CO4, CO5
Topic 2	Brainstorming Techniques & Models	CO4,
1 opic 2	Brainstorning Techniques & Wodels	CO4,
т : 2	0 11 104 157 4	
Topic 3	Social and Cultural Etiquettes	CO4,

5	Course Objective	<ol> <li>To empower students with necessary analytic and technical slavariety of practical problems in science and engineering by graphs using different computer software such as Mathematic /Maple /Scilab/Maxima etc.</li> <li>To make students appreciate the power and limitations of massolving practical real-life problems.</li> <li>To equip students with the basic mathematical modelling skil</li> </ol>	plotting the ca /MATLAB thematics in						
6	Course Outcomes	CO1: The main objective of the course is to equip the student to plograph and solve the different types of equations by plotting the graph different computer software such as Mathematica /MATI/Scilab/Maxima etc. (K1,K2,K3)  CO2. After completion of this course student would be able convergence of sequences through plotting, verify Bolzano-Weierstrathrough plotting the sequence, Cauchy's root test by plotting <i>n</i> th rottest by plotting the ratio of <i>n</i> th and ( <i>n</i> + 1)th term. (K2,K3)  CO3. Student would be able to plot Complex numbers and their recoperations like addition, substraction, Multiplication, Division, Modu Graphical representation of polar form. (K2,K3,K4)  CO4: Student would be able to perform following task of matrix Multiplication, Inverse, Transpose, Determinant, Rank, Eigenvectors, Eigenvalues, Characteristic equation and verification of the Captheorem, Solving the systems of linear equations. (K2,K3,K4)  CO5: Develop program scripts and functions using the Mathematice/Maple/Scilab/Maxima development environment. (K3,K4,K5)  CO6: Write the program for evaluates linear system of equation differential equations in Mathematica/MATLAB/Maple/Scilab/Max	t the different using LAB /Maple to know the set theorem to bots and Rational Ration						
7	Course	(K4,K5,K6). This course provides the fundamental basics of MATLAB. The prima	•						
	Description	of the course is to develop basic mathematical modelling and to s equations using MATLAB.							
8	Outline syllabus		CO Mapping						
	Unit 1	List of the practicals to be done using Mathematica /MATLAB /Maple /Scilab/Maxima etc.							
	A	Plotting the graphs of the following functions:  (i) ax  (ii) [x] (greatest integer function)	CO1						
	В	Plotting the graphs of the following functions: (iii) $x \ 2n \ ; n \in N$ (iv) $x \ 2n-1 \ ; n \in N$	CO1						
	С	Plotting the graphs of the following functions: $(v)1$ ; $n \in N$ , $X$ $2n-1$	CO1						

	(vi)1;n ∈ N X 2n	
Unit 2	Effect of Changes on Graphs	
A	Observe and discuss the effect of changes in the real constants a and b on the graphs. (vii) $\sqrt{ax + b}$ , $ ax + b $ , $c \pm  ax + b $ (viii) $ X $ , $\sin (1, x \sin 1, e^X)$ , $e^X$ for $x \ne 0$ .)	CO1, CO2
B, C	$(ix) e^ax+b, log(ax+b), sin(ax+b), cos(ax+b),   sin(ax+b) ,  cos(ax+b) . ax+b$	
Unit 3	Solution of Equation	
A, B, C	By plotting the graph find the solution of the equation $x = ex$ , $x^2 + 1 = ex$ , $1 - x^2 = ex$ , $x = log 10(x)$ , $cos(x)$ , etc	CO1, CO2
Unit 4	Plotting of Polynomial	
A, B, C	Plotting the graphs of polynomial of degree 2,3, 4 and 5, and their first and second derivatives.	CO2, CO3, CO4
Unit 5	Tracing	
A, B, C	<ol> <li>Sketching parametric curves, e.g., Trochoid, Cycloid, Epicycloid and Hypocycloid etc.</li> <li>Tracing of conic in Cartesian coordinates.</li> <li>Graph of circular and hyperbolic functions.         Obtaining surface of revolution of curves.     </li> </ol>	CO4, CO5, CO6

6	Course Objectiv e	Uncertainty is ubiquitous and probability theory provides a rational description of uncertainty. There is a growing realization that randomness is an essential component in modelling and analysis of a variety of systems. Probability has become an important conceptual framework of computer science, engineering, and physical and biological sciences. Several problems in computer engineering and other disciplines arise, which require probabilistic modelling. The complete specification of the model enquires statistical tools for the analysis of data and inference								
0	Outcome s	CO1: Describe the basic concepts of probability and randomness with their applications. (K2, K5). CO2: Describe the properties of discrete and continuous random variables. (K2). CO3: Calculate the measures of central tendency and dispersion of data and describe the method used for analysis, including a discussion of advantages, disadvantages, and necessary assumptions. (K2, K3) CO4: Calculate and interpret the probability distributions and their applications in real life; and limit theorems. (K2, K3). CO5: Monte Carlo simulation of simple probability models, entropy, and mutual information. (K2, K5) CO6: Develop the skills to interpret the results of statistical analysis. (K2, K5).								
7	Course	This is an introductory course in probability. Axioms of								
	Descriptio	conditional probability and independence, Bayes theorem, and	probability							
	n	distributions.								
8	Outline syllabu	abus								
	Unit 1	Mathematical Expectation								
	A	Axioms of probability, conditional probability and independence, Bayes theorem,	CO1							
	В	Random variables: discrete and continuous random variables, probability mass function (p.m.f), probability density function (p.d.f) and cumulative distribution function (c.d.f), Illustrations and properties of random variables.	CO1							
	С	Mathematical Expectation: Expectation of single and bivariate random variables, properties of expectation, conditional expectation, and its properties. Moments and cumulants. Moment generating function, probability generating function.	CO1							
	Unit 2	Discrete Random Variable	CO2							
	A	Random variables, distribution function, discrete random variable, expectation, variance	CO2							
	В	Discrete distributions: Bernoulli and Binomial random variable, Poisson random variable, demerits	CO2							
	С	Negative binomial random variable, Geometric random variable, and their properties, merits, and demerits								
	Unit 3	.,	CO3							
	A	Continuous random variable: the expectation of random variable, variance	CO3							

В	Continuous distributions: Uniform, Normal, Exponential, Gamma, and Cauchy, computing probabilities by conditioning, moment generating function, their properties, merits, and demerits.	CO3
С	Markov inequality and Chebyshev's inequality.	CO3
Unit 4		CO4
A	Jointly distributed random variables, Independent random variable, the sum of independent random variable	CO4, CO5
В	Central Limit Theorem, conditional distribution with example.	CO4, CO5
С	Joint probability distribution, covariance, correlation coefficient.	
Unit 5		CO5
A	Generation of random numbers and elements of Monte Carlo simulation.	CO5, CO6
В	Elements of information theory: entropy as a measure of randomness.	CO5,CO6
С	Exploratory data analysis, types of data, frequency tables, descriptive measures, variability measures	CO6

		application	tion for an
		CO6: <b>Formulate</b> new solutions for programing problems or in	mprove
		existing code using learned algorithms and data structures	nprove
7	Course	This course starts with an introduction to data structur	es with its
	Description	classification, efficiency of different algorithms, array and p	ointerbased
		implementations and Recursive applications. As the course	
		the study of Linear and Non-Linear data structures are studie	ed in details.
		The course talks primarily about Linked list, stacks, q	ueue, Tree
		structure, Graphs etc. This Course also deals with the	
		concept of searching, sorting and hashing methods	
8			CO
	Unit 1	Introduction	Mapping
	A	Data Structure Definition, Operations and Applications,	
	13	Abstract Data Types, Algorithm Definition, Introduction to	CO1
		Complexity, Big OH notation, Time and Space tradeoffs	
		Dynamic Memory Allocation (Malloc, calloc, realloc, free),	
	В	Recursion Definition, Examples- Tower of Hanoi problem, Tail Recursion	CO1
	С	Arrays: Implementation of One Dimensional Arrays,	
		Multidimensional Arrays, Applications of Arrays, Address	CO1
		Calculation, Matrix Operations, Sparse matrices	
	Unit 2	Linked List	
	A	Concept of Linked List, Garbage Collection, Overflow and	
		Underflow, Array Implementation and Dynamic	CO2
	D	Implementation of Singly Linked Lists	
	В	Array Implementation and Dynamic Implementation of Doubly Linked List, Circularly Linked List	CO2
	С	Operations on a Linked List- Insertion, Deletion, Traversal,	002
		Polynomial Representation and Addition	CO2

Unit 3	Stack and Queue	
A	Stacks: Definitions, Primitive operations, Application of stacks Conversion of Infix Expression to Postfix form, Evaluation of Postfix Expressions	CO3
В	Queues: Definition, Primitive Operations, Implementation of Circular Queues, Priority Queues	CO3
С	Deques, Application of Queues. Implementation - Linked Stacks, Linked Queues.	CO3
Unit 4	Tree and Graphs	
A	Trees: Terminologies, Binary tree, Representation, Applications, Binary search Tree Operations on Binary Search Trees (Traversing, Insertion, deletion etc.), Binary Search Algorithm, AVL Tree	CO4, CO6
В	Graph: Terminology, Representation, Traversals- Depth First Search, Breadth First Search.	CO4, CO6
С	Graph Applications Minimum Spanning Trees, Kruskal's Algorithms	CO4, CO6
Unit 5	Searching, Sorting and Hashing	
A	Implementation and Analysis - Linear search, Binary Search	CO5, CO6
В	Implementation and Analysis- Bubble Sort, Insertion Sort, Selection Sort, Tree sort	CO5,CO6
С	Hashing: Concepts and Applications, Hash Functions, Collisions, Methods of Resolving Collisions	CO5,CO6

4	Contact Hours (L-T-P)	1-0-2	
5	Course Type	AEC	
6	Course Objective	To Develop LSRW skills through audio-visual language acquirement, creative writing, advanced speech et al and MTI Reduction with the aid of certain tools like texts, movies, long and short essays.	
7	Course Outcomes	After completion of this course, students will be able to: CO1: Acquire Vision, Goals and Strategies through Audio-visual Language Texts CO2: Synthesize complex concepts and present them in creative writing CO3: Develop MTI Reduction/Neutral Accent through Classroom Sessions & Practice CO4: Determine their role in achieving team success through defining strategies for effective communication with different people CO5: Realize their potentials as human beings and conduct themselves properly in the ways of world. CO6: Acquire satisfactory competency in use of Quantitative aptitude and Logical Reasoning	
8	Course Description	The course takes the learnings from the previous semester to an advanced level of language learning and self-comprehension through the introduction of audio-visual aids as language enablers. It also leads learners to an advanced level of writing, reading, listening and speaking abilities, while also reducing the usage of L1 to minimal in order to increase the employability chances.	
9		Outline syllabus – ARP 102	
	Unit A	Acquiring Vision, Goals and Strategies through Audio-visual Language Texts	
	Topic 1	Pursuit of Happiness / Goal Setting & Value Proposition in life	CO1
	Topic 2	12 Angry Men / Ethics & Principles	CO1
	Topic 3	The King's Speech / Mission statement in life   strategies & Action Plans in Life	CO1
	Unit B	Creative Writing	
	Topic 1	Story Reconstruction - Positive Thinking	
	Topic 2	Theme based Story Writing - Positive attitude	CO2
	Topic 3	Learning Diary Learning Log – Self-introspection	
	Unit C	Writing Skills 1	
	Topic 1	Precis	
	Topic 2	Paraphrasing	CO2

	nalytics	Semester: III							
1	Course Code	MTR2351							
2	Course Title	Research Based Learning-I							
3	Credits	00							
4	Contact Hours (L-T-P)	0-0-2							
	Course Status	Project							
5		Deep knowledge of a specific area of specialization. Develop commu especially in project writing and oral presentation. Develop time management							
6	Outcomes	CO1: Understand the basics of software and programs used during re effective writing and presentation. (K1) CO2: Demonstrate the knowledge of a program best suited for mathe K2) CO3: Construct and develop a deeper interest in mathematics and a taresearch. (K3, K4) CO4: Determine effective project organizational skills. (K5) CO5: Analyse the problem and summarize research findings and pres CO6: Formulate the research findings to develop education theory an (K3, K6)	ematics. (K1, aste for sent. (K4, K5)						
7	Course Description	Maintain a core of mathematical and technical knowledge that is adapthenging technologies and provides a solid foundation for future lear							
8									
	Unit 1	Introduction to word	CO1						
		Introduction to basics of fonts, alignments, layout and design.							
		Inserting tables and images.							
			CO1, CO2						
		Student learns basic syntax and writes equations. Learns to insert							
		matrix, tables and images. Writing references.							
		Information Collection and Feasibility Analysis of the Identified Problem	CO3, CO4						
		Student collects information from multiple sources and analyzes the information in-depth, also checks the feasibility.							
	Unit 4		CO4, CO5						
		Title is clearly defined and the context for the research provided							
	Unit 5	Literature Review of Problem Domain  To review the research papers from various databases (Scopus, Taylor Francis, Springer, etc.)	CO5, CO6						
	Mode of examination	Project							
	Weightage Distribution	CA: 30%; CE: 30%; ESE: 40%							
	Text book/s*	Research Methodology by C R Kothari; A Beginners Guide To Research Methodology by Ashreet Acharya and Abhipsa Anamika

		2. Prov	ide richer context to clas	srooms, to make them	more effective					
		labor	atories of learning by alignment	gning them to social re	ealities beyond					
		textbe	ooks	-	-					
		3. Prov	ide scope to faculty membe	ers to align their teaching	g and research					
			by giving them ample oppo		_					
		proje		ortunity to early out comm	numity offented					
					las kanafts ta					
			re that the community co							
			nunities in tangible ways so							
		_	the interaction and involvem		-					
			ide ample opportunity		·					
		comr	nunity to contribute effect	ively to society and natio	n building					
7	Course	After comple	tion of this course, students	will be able to:						
	Outcomes	_	dents learn to be sensitive t		disadvantaged					
		communi		2 2						
			idents learn to appreciate	societal realities beyond	textbooks and					
		classroon	ns							
			dents learn to apply their k ty benefit	nowledge via research, a	and training for					
		CO4: Stu timely de	dents learn to work on socielivery	o-economic projects with	teamwork and					
		CO5: Stu to society	dents learn to engage with co	ommunities for meaningfo	ul contributions					
		CO6: The	e survey will help to identify	y the gaps and create a pla	an to further					

		improve the situation related to social problems prevailing in different sections of society and find the solution in a sustainable manner.
8	Theme	Major research themes:
		<ol> <li>Survey and self-learning: In this mode, students will make the survey, analyze data, and will extract results to correlate with their theoretical knowledge. E.g. Crops and animals, land holding, labor problems, medical problems of animals and humans, savage and sanitation situations, waste management, etc.</li> <li>Survey and solution providing: In this mode, students will identify the common problems and will provide solutions/ educate the rural population. E.g. air and water pollution, the need for treatment, use of renewable (mainly solar) energy, electricity-saving devices, inefficiencies in the cropping system, animal husbandry, poultry, pest control, irrigation, machining in agriculture, etc.</li> <li>Survey and reporting: In this mode, students will educate villagers and survey the ground-level status of various government schemes meant for rural development. The analyzed results will be reported to concerned agencies which will help them for taking necessary/corrective measures. E.g. Pradhan Mantri Jan Dhan Yojana, Pradhan Mantri MUDRA Yojana, Pradhan Mantri Jeevan Jyoti Bima Yojana, Atal pension Yojana, Pradhan Mantri Awas Yojana, Pradhan Mantri FasalBima Yojana, Swachh Bharat Abhiyan, Soil Health Card Scheme, Digital India, Skill India Program, BetiBachao, BetiPadhao Yojana, DeenDayal Upadhyaya Gram Jyoti Yojana, Shyama Prasad Mukherjee Rurban Mission, UJWAL Discom Assurance Yojana, PAHAL, Pradhan Mantri Jan Aushadhi Yojana, Pradhan Mantri KhanijKshetra Kalyan Yojana, Pradhan Mantri Suraksha Bima Yojana, UDAN scheme, DeenDayal Upadhyaya Grameen Kaushalya Yojana, Pradhan Mantri Sukanya Samriddhi Yojana, Sansad Adarsh Gram Yojana, Pradhan Mantri SurakshitMatritva Abhiyan, Pradhan Mantri RojgarProtsahan Yojana, Midday Meal Scheme, Pradhan Mantri Vaya Vandana Yojana, Pradhan Mantri Matritva Vandana Yojana, and Ayushman Bharat Yojana.</li> </ol>
9.1	Guidelines for Faculty Members	It will be a group assignment. There should be no more than 10 students in each group. The faculty guide will guide the students and approve the project title and help the student in preparing the questionnaire and final report. The questionnaire should be well-designed and it should carry at least 20 questions (Including demographic questions). The faculty will guide the student to prepare the PPT. The topic of the research should be related to social, economical, or environmental issues concerning the common man. The report should contain 2,500 to 3,000 words and relevant charts, tables, and photographs.

	Course Status	Minor								
5	Course Objective  1. The main objectives of this course are to introduce the methods a for solving linear integral equations, to study Laplace and Fourier t with their applications to DE.  2. Integral equations and to provide an understanding the problems calculus of variations.									
6	Course Outcomes	eraa as well as lications.								
7	Course Description	This course is determine the solutions to Volterra as well as Fred equations by method of resolvent kernel, method of successive apprention of integral transforms, understand with eigen values and eigen of homogeneous Fredholm integral equations, calculate the Lapla Fourier transform and their inverse transforms of common founderstand the formulation of variational problems, the variation of and its properties, extremum of functional, necessary condextremum.	proximations, gen functions ce transform, unctions and f a functional							
8	Outline syllabus		CO Mapping							
	Unit 1	Linear Integral Equations								
	A	Definition, examples and classification of integral equations, Relation between differential and integral equations.	CO1							
	В	Solution of Volterra as well as Fredholm integral equations of CO1 second kinds by the method of successive substitutions and successive approximations.								
	С	Iterated and resolvent kernels.	CO1							
	Unit 2	More on Fredholm Equations								
	A	Solution of Fredholm integral equations with separable kernels.	CO2							
	В	Eigen values and eigen functions of Homogeneous Fredholm integral equations.	CO2							

С	Solution of integral equations with symmetric kernels, Fundamental	CO2
	properties of Eigenvalues and Eigen functions for symmetric	
	equations.	
Unit 3	Integral Transforms	
A	<u> </u>	CO3
В	Solution of integral equations and PDEs by Laplace transform method.	CO3
С	Piecewise continuity and Dirichlet's conditions.	CO3
Unit 4	Fourier transform and Their Applications	
A	Fourier integrals, Fourier sine and cosine integrals.	CO4
В	Fourier transform, Fourier sine transform, Fourier cosine transform and their inversion formulae.	CO4
С	Fourier transform of elementary functions, Properties of Fourier transform, Solution of integral equations.	CO4
Unit 5	Calculus of Variations	
A	Functional and its variation and extremal, Variational principle, Euler's equation and its different cases.	CO5
В	Invariance of Euler's equation under coordinates transformation, Functional involving several dependent variables.	CO5
С	Functional depending on higher order derivatives, Functionals dependent on functions of several independent variables.	CO6

5	Course Objective	To enhance holistic development of students and improve their employability skills. Provide a 360 degree exposure to learning elements of Business English readiness program, behavioural traits, achieve softer communication levels and a positive self-branding along with augmenting numerical and altitudinal abilities. To up skill and upgrade students' across varied industry needs to enhance employability skills. By the end of this semester, a will have entered the threshold of his/her 4 <sup>th</sup> phase of employability enhancement and skill building activity exercise.					
6	Course Outcomes	After completion of this course, students will be able to: CO1: Develop a creative resumes, cover letters, interpret job descriptions and interpret KRA and KPI statements and art of conflict management. CO2: Build negotiation skills to get maximum benefits from deals in practical life scenarios. CO3: Develop skills of personal branding to create a brand image and self-branding CO4: Acquire higher level competency in use of logical and analytical reasoning such as direction sense, strong and weak arguments CO5: Develop higher level strategic thinking and diverse mathematical concepts through building analogies, odd one out CO6: Demonstrate higher level quantitative aptitude such as average, ratio & proportions, mixtures & allegation for making business decisions.					
7	Course Description	This penultimate stage introduces the student to the basics of Human Resources. Allows the student to understand and interpret KRA   KPI and understand Job descriptions. A student also understands how to manage conflicts, brand himself/herself, understand relations and empathise others with level-4 of quant, aptitude and logical reasoning

	Objective	The course covers reinforcement learning, neural ne	-										
		learning models while incorporating essential mathe											
		such as probability, linear algebra, and optimization											
		explore techniques like feature engineering, model											
		hyperparameter tuning to enhance machine learning m											
		and apply them to real-world data science challenges.	oder performance										
6	Course	CO1: Understand and apply reinforcement learning ted	chniques for data										
	Outcomes		infiques for data										
		driven decision-making problems. <b>CO2:</b> Explain the structure of neural networks and train simple models											
			ii simple models										
		using backpropagation  CO3: Develop deep learning models using Convolutional Neural											
		CO3: Develop deep learning models using Convolutional Neural Networks (CNNs) and Recurrent Neural Networks (RNNs).											
			Perform feature engineering techniques to enhance model										
		performance in structured/tabular data analysis	lee model										
		CO5: Evaluate machine learning models using appropri	riate metrics and										
		techniques.	riate inetries and										
		CO6: Interpret machine learning models and analyze e	thical concerns										
		related to AI applications.											
7	Course	This course explores reinforcement learning, neural network	s, deep learning.										
	Description	and large language models (LLMs). It covers AI architectur											
	-	techniques, real-world applications, ethical concerns, and fu	ture AI trends.										
8	Outline syllabus		CO Mapping										
	Unit 1	Introduction to Reinforcement Learning											
	A	Basics of reinforcement learning (RL) – Agents, actions,											
		rewards, environments.	CO1										
	В	Q-learning and policy-based RL methods – Concept,											
		advantages, and applications.	CO2										
	С	Implement Q-learning in a simple environment (e.g.,											
		GridWorld), and train an agent using Deep Q-Networks											
		(DQN) in OpenAI Gym.	CO2										
	Unit 2	Neural Networks & Training											
	A	Structure of neural networks – Neurons, layers, weights, and activation functions.	CO3										
			•										

В	Backpropagation Descent, Adam		nization techniques (Gradient	CO3						
С	PyTorch, expe	Implement a simple feedforward neural network in PyTorch, experiment with activation functions, and train/test on small datasets.

5	This course aims to develop a strong foundation in descriptive statistics, probability theory, and statistical inference. Students will learn key concepts such as probability spaces, random variables, probability functions, generating functions, and hypothesis testing. The course also covers laws of large number probability inequalities, and central limit theorems, equipping students with essential tools for data analysis and statistical modeling.									
6	CO1: Understand and analyze descriptive statistics, measures of central tendency, dispersion, and fundamental set theory concepts. (K1, K2, K6) CO2: Grasp fundamental probability concepts, including probability spaces, independence, conditional probability, and Bayes' theorem. (K1,K2,K4) CO3:Explore random variables, probability functions, mathematical expectations, and probability inequalities. (K2,K3,K4) CO4: Analyze bivariate distributions, marginal and conditional distributions, and their statistical implications. (K2,K4) CO5: Understand generating functions, hypothesis testing, and statistical inference concepts, including Type I & II errors. (K1,K2,K5) CO6: Apply laws of large numbers, central limit theorems, and statistical inequalities in probability and inference (K2,K3,K4)									
7	Course Description	This course covers descriptive statistics, probability theory, rar probability distributions, generating functions, and hypothesis explores laws of large numbers, probability inequalities, and contheorems for statistical analysis and decision-making.	testing. It also

7	Course	work. (K4,K5) The purpose of this course is to give students a solid for	undation in						
/	Descriptio	econometric techniques, various functions for economic analysis							
	n	forecasting. Many of the methods introduced in this course are al							
		business, finance, and many other disciplines.							
8									
	Unit 1								
	A	Introduction to econometrics. A review of least squares and	CO1						
		maximum likelihood estimation methods of parameters in the							
		classical linear regression model and their properties.							
		Generalized least squares estimation and prediction,	CO1						
	В	construction of confidence regions.	001						
	С	Tests of hypotheses, use of dummy variables, and seasonal adjustment.	CO1						
	Unit 2								
	A	Regression analysis under linear restrictions, restricted least	CO2						
		squares estimation method and its properties.							
	В	Problem of Multicollinearity, its implications, and tools for handling the problem.	CO2						
	С	Ridge regression. Heteroscedasticity, consequences, and tests	CO2						
		for it.							
	Unit 3								

A	Estimation procedures under heteroscedastic disturbances,	CO3					
A	Bartlett's test, Breusch Pagan test, and Goldfelf Quandt test.	COS					
В	Autocorrelation, sources, and consequences.	CO3					
С	Autoregressive process tests for autocorrelation.	CO4					
Unit 4							
A	Durbin Watson test. Asymptotic theory and regressors.	CO5					
В	Instrumental variable estimation, errors in variables.	CO5					
C Simultaneous equations model, the problem of identification, a necessary and sufficient condition for the identifiability of parameters in a structural equation.							
Unit 5							
A	Ordinary least squares, indirect least squares.	CO6					
B Two-stage least square.							
С	Limited information maximum likelihood method.	CO6

5	Course Objective	The goal of this course is to introduce students to the mathematical concepts for MATLAB. The course will syntax and semantics of MATLAB including control comments, variables, functions etc. Once the foundat language have been established students will explore types of scientific Programming problems including of ODE solving etc	Il cover the structures, ions of the different								
6	Course Outcomes	CO1: Describe the fundamentals of MATLAB and use for interactive computations. (K2, K3) CO2: Demonstrate with strings and matrices and their K3) CO3: Illustrate basic flow controls (if-else, for, while CO4: Create plots and export this for use in reports as presentations. (K3, K5) CO5: Develop Programme scripts and functions using MATLAB development environment. (K4, K5) CO6.Create and control simple plot and user-interfact objects in MATLAB (K4, K5)	r uses. (K2, e). (K3) and g the								
7	Course Description	The course will give the fundamental knowledge and practical abilities in MATLAB required to effectively utilize this tool in technical numerical computations and visualisation in other courses.  Syntax and interactive computations, Programming in MATLAB using scripts and functions, rudimentary algebra and analysis. On and two-dimensional graphical presentations. Examples on engineering applications.									
8	Outline syllabus	•	CO Mapping								
	Unit 1	Practical based MATLAB as a calculator.	CO1								
		Creating an Array in MATLAB	CO1								
	Unit 2	Practical related to Mathematical Operations with Arrays	CO3								

Unit 3	Practical related to How to make scripts files in MATLAB and do some examples.	CO4
Unit 4	Practical related to Make some function files in	CO5,CO6
	MATLAB. Basic two-dimensional and three-	
	dimensional	

plotting, change in axes and annotation in a figure.								
Unit 5  Practical related to If-End statement, If-Else-End statement, nested If-Else-End statement Solving a system of linear equations, curve fitting with polynomials using inbuilt functions such as polyfit.

2	Course Title	DIFFERENTIAL GEOMETRY & TENSOR ANALYSIS
3	Credits	4
4	Contact Hours	4-0-0
	(L-T-P)	
	Course Status	Compulsory
5	Course Objective	1. Familiarise students with basic concept of local theory of curves: space curves, e.g., plane curves, tangent and normal and binormal; Osculating plane, normal lines and normal plane, curvature and torsion, rectifying plane; Helices, arc length, Serret-Frenet formulae. Have an idea of Bertrand curves and its properties, Contact between curve and surfaces, tangent surfaces, tangent vectors and vector fields, Fundamental theorems for space curves, involutes and evolutes of curves, Metric-first fundamental form and second fundamental form.
		2. Have an understanding of Normal curvature, quadratic form of normal curvature, mean curvature, Gaussian curvature and minimal surface, geodesics, canonical geodesic equations, normal properties of geodesics, geodesics curvature, lines of curvature, Rodrigue's formula. Know about Tensor calculus, Vector spaces, the dual spaces, tensor product of vector spaces, transformation formulae, contraction, inner product and outer product of two tensor. To know Contra variant and covariant tensors, mixed tensors of higher order, symmetric and skew-symmetric tensors, Quotient theorem, Reciprocal tensors, metric tensor, conjugate metric tensor with examples. Christoffel's symbols, covariant differentiation and Riemannian curvature tensor.
6	Course Outcomes	CO1: Describe the concept of local theory of curves: space curves, Osculating plane, normal lines and normal plane and explain curvature and torsion rectifying plane; Helices, arc length, Serret-Frenet formulae. (K1,K2,K4)
		CO2: Explain the theory of curves: Bertrand curves, Contact between curve and surfaces, tangent surfaces, tangent vectors and vector fields and write Fundamental theorems for space curves, involutes and evolutes of curves describe Metric-first fundamental form and second fundamental form. (K2,K4,K6)
		CO3: Discuss the concept of curvature and evaluate normal curvature, quadratic form of normal curvature, mean curvature, Gaussian curvature and minimal surface, geodesics, canonical geodesic equations, normal properties of geodesics, geodesics curvature, lines of curvature, Rodrigue's formula. (K1,K2,K5)
		CO4: Explain Tensor calculus, Vector spaces, and the dual spaces, tensor product of vector spaces, transformation formulae, and contraction; evaluate inner product and outer product of two tensor. (K2,K4,K5)
		CO5: Describe the concept of contra variant and covariant tensors, mixed tensors of higher order, symmetric and skew-symmetric tensors. (K1,K2)
		CO6: Write the Quotient theorem, Reciprocal tensors, metric tensor, illustrate conjugate metric tensor with examples. Christoffel's symbols, covariant differentiation and Riemannian curvature tensor.(K3,K6)

2	Course Title	Numerical Solution of Differential Equations									
3	Credits	3									
4	Contact Hours (L-T-P)	3-0-0									
	Course Status	DSE									
5	Course Objective	1. To develop systematic understanding of key aspects of finite difference methods for approximating solutions of ordinary differential equations (ODEs) and partial differential equations (PDEs).  2. To demonstrate students with the capability to deploy established approaches accurately to analyze and solve problems using a reasonable level of skill in calculation and manipulation of the material in the following areas: multistep methods, approximation of boundary value									
		problems, finite difference methods.									
6	Course Outcomes	The student will be able to CO1: Recall numerical solution of DE using various available methods. CO2: Solve 1D BVPs using finite difference methods and discuss their convergence. CO3: Solve 2D elliptic PDEs using finite difference methods. CO4: Solve parabolic PDEs using finite difference methods. CO5: Solve hyperbolic PDEs using finite difference methods. CO6: Discuss the convergence and estimate error.									
7	Course Description	This course addresses students of all fields who are interested i methods for ordinary and partial differential equations, with rigorous mathematical basis. Many modern and efficient app presented, after fundamentals of numerical approximation are Of particular focus is on qualitative understanding of the ordinary and partial differential equation, fundamentals difference, finite element, and spectral methods, and importance such as stability, convergence, and error analysis.	focus on a proaches are established. considered of finite

School: SSBSR		Batch: 2024-28						
Programme: B.SC		Academic Year: 2027-28						
Brai Mat	nch: hematics	Semester: VIII						
1	<b>Course Code</b>	MMT202						
2	Course Title	MEASURE THEORY						
3	Credits	4						
4	Contact Hours	4-0-0						
	(L-T-P)							
	Course Status	Minor						
5	Course Objective	This course provides an introduction to topics involving concepts of Topological space, $\sigma$ -algebra of measurable sets, Borel sets, measurable functions, Lebesgue measure, integration of complex functions and linear functional.						
6	Course Outcomes	CO1: Explain the concept of Topological spaces and calculat exterior limit point and boundary points. (K2, K3, K4)	e interior,					
		CO2: Describe the concept of approximation of measurable functions, explain Lebesgue's monotone convergence theorem and Fatou's lemma a evaluate integration of positive functions, term by term differentiation of series of positive measurable functions. (K1,K2, K5)						
		CO3: Discuss the integration of complex function.(K1, K2)						
		CO4: Explain Lebesgue's dominated convergence theorem, role of sets of measure zero, write extension of a measure to a complete measure. (K2,K4,K6)						
		CO5: Explain integration as linear functional, Topological ingredients and write positive Borel measure, Hausdorff spaces. (K2, K3, K4, K6)						
		CO6: Describe the concept locally compact Hausdorff spaces, supposed function, vector space of continuous complex functions we compact support and write Urysohn's lemma, Riesz representation (K1,K2, K6)						
7								
8	Outline syllabus CO Mapping							
	Unit 1	Preliminaries:						
	A	Topological spaces, continuous functions	CO1					
	В	$\sigma$ -algebra of measurable sets, Borel sets, measurable functions	CO1					
	С	lim sup and liminf of sequence of functions.	CO1					
	Unit 2	Lebesgue measure:						
	A	Approximation of measurable functions by simple	CO2					

	functions, posi	tive measures				
В	Integration of convergence the	CO2				
С	Term by term differentiation of a series of positive measurable functions, Fatou's lemma.					
Unit 3	Integration of					
A	Complex meas measurable fur	CO3				
В	Lebesgue's do measure zero	CO3, CO4				
C	Extension of a	measure to a c	omplete measure.	CO3, CO4		
Unit 4	Integration as	tional:				
A	Positive Borel	CO5				
В	Integration as	CO5				
C	Definition of c	CO5				
Unit 5	Riesz represe					
A	Locally compa	CO6				
В	Vector space of compact support	CO6				
С	Urysohn's lem	CO6

	(L-T-P)		
	Course Status	Project	
5	Course Objective	Conduct detailed mathematical research with emphasis	
		on originality and rigor.	
		• Strengthen academic writing and oral presentation skills	
		through dissertation writing and defense.	
6	Course Outcomes	CO1: Demonstrate comprehensive understanding of the	
		selected topic through data analysis and theoretical	
		application. (K4)	
		CO2: Apply mathematical tools and advanced	
		methodologies to solve the research problem. (K5)	
		CO3: Prepare a structured, well-documented dissertation.	
		(K5, K6)	
		CO4: Present and defend research outcomes effectively.	
		(K6)	
		CO5. Discuss the ethical dimensions of your research and	
		obtain appropriate ethical approval if needed. (K5)	
		CO6. Plan a research article of the findings in an	
		appropriate manner. (K6)	
7	Course Description	This course involves conducting substantial and original	
		research, data analysis, and producing a detailed	
		dissertation. Students are expected to adhere to academic
