Program Structure Program: M.Sc. Biotechnology Program Code: SBR0413 Batch: 2020-22 Department of Life Sciences School of Basic Science & Research

M.Sc. in Biotechnology

COURSE STRUCTURE & SYLLABI

(For Batch 2020-21 onwards)

Department of Life Science School of Basics Sciences and Research SHARDA UNIVERSITY

Vision, Mission and Core Values of the University

Vision of the University

To serve the society by being a global University of higher learning in pursuit of academic excellence, innovation and nurturing entrepreneurship.

Mission of the University

- 1. Transformative educational experience
- 2. Enrichment by educational initiatives that encourage global outlook
- 3. Develop research, support disruptive innovations and accelerate entrepreneurship

Core Values

- Integrity
- Leadership
- Diversity
- Community

Vision of the School

Achieving excellence in the realm of basic and applied sciences to address the global challenges of evolving society

Mission of the School

- 1. To equip the students with knowledge and skills in basic and applied sciences
- 2. Capacity building through advanced training and academic flexibility.
- 3. To establish centre of excellence for ecologically and socially innovative research.
- 4. To strengthen interinstitutional and industrial collaboration for skill development and global employability.

Vision of Life Sciences Department

Strive to achieve excellence in teaching and research in the field of Microbiology and Biotechnology and to build human resource for solving contemporary problems.

Mission of Life Sciences Department

- Providing distinctive and relevant education in Life Sciences to students. Motivating young minds through innovative teaching methods, to acquire theoretical knowledge and practical skills in different disciplines of chemistry and empowering them with problem solving skills.
- Nurturing innovation by carrying out world class research and scholarly work
- Promoting interdisciplinary research in collaboration with national/international laboratories/Institutions.

Program Educational Objectives (PEO)

PEO1: To create a foundation of various biological concepts and phenomena in the minds of students through theoretical and practical knowledge.

PEO2: To keep students upgraded with new discoveries in biological world and inculcate continuous learning and self-improvement so that students are motivated for higher studies and research.

PEO3: To teach the students various bio-techniques and application of these techniques for betterment of society and environment.

PEO4: To make students industry- or academia-ready by developing independent thinking, good communication and scientific skills and to acquaint them with professional ethics so that they can work well in an industrial or academic environment.

PEO5: To make students understand interdisciplinary nature of research in biotechnology by assigning them different research projects/ case studies/ presentations.

Map PEOs with Mission Statements:

PEO Statements	School Mission 1	School Mission 2	School Mission 3	School Mission 4
PEO1	3	2	-	-
PEO2	3	2	2	-
PEO3	3	3	2	1
PEO4	2	3	2	2
PEO5	3	2	2	2

1. Slight (Low) 2. Moderate (Medium) 3. Substantial (High)

PEO1	3	1	1	1
PEO2	3	3	2	2
PEO3	2	2	2	2
PEO4	3	-	2	3
PEO5	3	2	3	2

Map PEOs with Department Mission Statements:

Program Outcomes (PO's)

PO1: Knowledge: Students will develop a sound understanding the biological systems and processes.

PO2: Skill Set Development: The student will be skilled in various biological techniques that will enhance the employability of the students.

PO3: Oral Communication and Scientific Writing: The students will be able to demonstrate good oral communication. Students will also be knowledgeable about writing technical (project report and reviews) content.

PO4: Environment and Sustainable Development: Student will be able to realize the effect of human malpractices on environment and the need and importance of sustainable development.

PO5: Ethics, Independent Thinking and Team Work: The students will develop professional ethics and also gain knowledge about various ethical issues associated with biotechnology.

Students will learn to think and analyze a problem independently while at the same time realizing the importance of team work in carrying out successful research/ projects/ presentations.

Mapping of Program Outcome Vs Program Educational Objectives

	PEO1	PEO2	PEO3	PEO4	PEO5
PO1	3	2	2	2	2
PO2	3	2	2	3	2
PO3	1	1	-	3	2
PO4	1	2	3	-	2
PO5	1	2	-	3	2

MSB114 : Advanced Biochemistry L-T-P: 4-0-0

Sch	ool : SBSR	Batch : 2020-2022	
Pro	gram: M.Sc.	Current Academic Year: 2020-21	
Bra	nch:	Semester: 1	
Bio	technology		
1	Course Code	MSB114	
2	Course Title	Advanced Biochemistry	
3	Credits	4	
4	Contact Hours	4-0-0	
	(L-T-P)		
6	Course	1. Structure of polysaccharides	
	Objective	2. Classification and structure of lipids	
		3. Protein-ligand interaction and modulation of protein	
		4. Assimilation of inorganic phosphorus, sulfur and r	nitrogen, Nitrogen
		fixation	
7	Course	After studying this course, students will be able to	
	Outcomes	CO1: Determine Classification and structure of carbohydrate	
		CO2: Evaluate Nucleic acid structure, nucleic acid chemis	stry, Functions of
		Nucleotides	of motoin optivity
		CO3: Interpret the Protein-ligand interaction and modulation CO4: Analyse the Biosynthesis of polysaccharides and i	
		sugars	increoiversion of
		CO5: Determine Synthesis of purines, pyrimidines and nucle	otides
		CO6 : Analyze and study Photosynthesis and photophosphor	
8	Course	This course contains various advanced biochemistry concepts	
Ŭ	Description	structure and classification of carbohydrates, proteins, nuclei	00
		nucleotides. After studying course, students will be able to le	
		biomolecules, and their metabolic pathways.	5
9	Outline syllabus		CO Mapping
	Unit 1	Carbohydrates	CO1
	А	Classification and structure of carbohydrates, Structure of	
		polysaccharides	
	В	glycoproteins and peptidoglycans, Functions of	
		polysaccharides	
	С	glycoproteins and peptidoglycans.	
	Unit 2	Lipids Amino acids, Nucleic acids and Nucleotides	CO2
	А	Classification and structure of lipids, Saturated and	
		unsaturated fatty acids, rancidity	
	В	Classification, structure and functions of amino acids,	
		Peptide Bond, Ramachandran Plot, Primary, secondary and	
		Tertiary structure of Proteins	
	С	Nucleic acid structure, nucleic acid chemistry, Functions of	
		Nucleotides	
	Unit 3	Chemistry of Biomolecules, Biological Membranes and	CO3
		Transport	
	Α	Protein-ligand interaction and modulation of protein activity,	
		protein sequencing	

В	Composition a	nd architecture	of membranes	
С	membrane dyr	amics, solute t	ransport across membranes	
Unit 4	Metabolic Pa	thways		CO4
А		oxylate cycle,	f, HMP and oxidative pentose ΓCA cycle, and oxidative	
В			rides and interconversion of getics of β -oxidation of fatty	
С	long chain fa acids: saturate	•	bolism: Biosynthesis of fatty	
Unit 5	Nucleotide Bi Biosynthesis	osynthesis and	Use of Energy in	CO5
А	Synthesis of p	urines, pyrimid	ines and nucleotides	
В	Photosynthesis	s and photopho	sphorylation, Photorespiration	
С	Assimilation of Nitrogen fixat		osphorus, sulfur and nitrogen,

3	Credits	4		
4	Contact	4-0-0		
	Hours			
	(L-T-P)			
	Course	Compulsory/Elective/Open Elective		
	Status			
5	Course	1. Understand the structure and function of nucleic acid	s and genome	
	Objective	organization.		
		2. Understand the process of DNA replication and Tran	scription in	
		prokaryote and eukaryote.		
		3. Understand the process of Translation and regulation	of gene	
		expression.		
6	Course	CO1: To understand the structure and function of Nucleic ad	cid, Chromatin	
	Outcomes	and Chromosome.		
		CO2: To understand the process of DNA replication in process	rokaryotes and	
		eukaryotes.		
		CO3: To understand the process of transcription in prokaryo		
		CO4: To understand the process of transcription in eukaryote		
		CO5: To understand the process of Translation and regu	lation of gene	
		expression		
		CO6: Observe different life processes happening at molecul	lar level inside	
-		cell and perspectives on gene regulation.	1	
7	Course	The course covers the gene organization in prokaryotic and en		
	Description	Course will familiarise students with the process of		
		transcription, post-transcriptional modifications and trans	lation in both	
0	Quellin a avillabi	prokaryotes and eukaryotes.	CO Manning	
8	Outline syllabi		CO Mapping	
	Unit 1	Genome Organization	CO1	
	Α	Structure of DNA and RNA, Nucleoside and nucleotide, CO1		
	D	complementary base pairing	CO1	
	BDNA melting and reassociation kineticsCStructure of eukarvotic chromosomes, Euchromatin and		C01	
		Structure of eukaryotic chromosomes, Euchromatin and heterochromatin.	COI	
	Unit 2			
		DNA Replication Replication process in prokaryotes	CO2	
	A			
	BReplication process in eukaryotesCO2			

С	Enzymes and	accessory pr	roteins in replication, Replication	CO2
	of ss-circular			
Unit 3	Prokaryotic	Transcriptio)n	
А	Process of pro	okaryotic trai	nscription	CO3
В	Inducible and	constitutive	promoters	CO3
С	Operators and	l regulators i	n prokaryotic transcription	CO3
Unit 4	Eukaryotic 7			
А	Process of eu	karyotic tran	scription	CO4
В	Eukaryotic p	promoters a	nd enhancers, TATA binding ctors, activators and repressors	CO4
С	Post-transcrip	tional modif	ications	CO4
Unit 5	Translation a	and Regulat	ion of gene expression	
А	Translation n	nachinery, R	ibosome, degeneracy of codons	CO5
	and termination	on codons		
В	Mechanism o	f initiation, e	longation and termination	CO5
С	Operon system	m, Lac opero	n, Trp operon and Ara operon.	CO5

MSB202: Medical Biotechnology

L-T-P: 4-0-0

School: SBSR		Batch : 2020-2022				
	gram: MSc	Current Academic Year: 2020-21				
	nch: BT	Semester: 01				
1	Course Code	MSB202				
2	Course Title	MEDICAL BIOTECHNOLOGY				
3	Credits	4				
4	Contact	4-0-0				
	Hours					
	(L-T-P)					
	Course	Compulsory				
	Status					
5	Course	1.Students will be able to understand complete mechanis	m of infection,			
	Objective	diseases transmission and host parasite relationship.				
		2.Correlate between emerging and resurgent infectious d	iseases and the			
		importance of new therapeutic strategies.				
		3.Evaluate the efficacy of different chemicals and antin				
		and determine the mechanism of resistance to antibiotics				
		4.Students will understand concept of vaccines and new	strategies that			
		can be used for vaccine development.				
6	Course	CO1: Describe different types of microbial infections	and causative			
	Outcomes	agents				
		CO2: Classify different pathogenic organisms based o	n nucleic acid			
		properties	-1			
		CO3: Comprehend concepts of sterilization, anti-bacter	ial, anti-fungal			
		and anti-viral vaccines and drugs. CO4: Assess the methods of prevention of infection,	and the basic			
		concepts of identification of causative agents	and the basic			
		CO5: Describe the advanced methods of diagnostics	of infectious			
		diseases and cancer	of infectious			
		CO6: Compare the different causes of infection, the	ir methods of			
		detection, prevention and therapy	in methods of			
7	Course	Medical Biotechnology course is to develop the concept	of host parasite			
-	Description	relationship, epidemiology of different diseases. To u				
	1	mode of action of different antimicrobial drugs and				
		understand the treatment mechanism of different bacter				
		fungal pathogens.				
8	Outline syllabi		CO Mapping			
	Unit 1	Microbial diseases	CO1, CO6			
	А	Bacteria: Representative diseases to be studied in detail				
		- tetanus, diphtheria, cholera, typhoid. Infections				
		caused by anaerobic bacteria: chlamydia, rickettsiae.				

D		
В	Viruses: Representative diseases to be studied in detail	
	are - viral hepatitis, influenza, rabies, polio and AIDS.	
C	Fungi: Diseases to be taken up in following categories:	
	superficial, subcutaneous, systemic and opportunistic	
	mycoses.	
	Protozoa: Diseases to be discussed are - amoebiasis,	
	toxoplasmosis, trichomoniasis & leishmaniasis	
Unit 2	Epidemiology, microbial assays, microbial DNA replication	CO2, CO6
A	Disease burden: microbial, viral, fungal and parasitic.	
2 x	Investigation of epidemics	
В	Methods of culturing and assaying: bacterial, viral and	
D	parasitic.	
С	Classification: fungal, protozoal, helminthic, bacterial	
C		
	and viral replication of DNA, RNA+ve and RNA-ve	
TT • 4 0	viruses, retroviruses	
Unit 3	Vaccines, drugs and therapy	CO3, CO6
А	Sterilization techniques: biohazard hoods; containment	
	facilities, BSL 2, 3, 4; Bacterial and viral vectors;	
	Biological warfare agents	
В	Mode of action of antibiotics and antiviral: molecular	
	mechanism of drug resistance (MDR)	
C	Viral vaccines: conventional: killed/attenuated; DNA;	
	peptide; recombinant proteins; Anti-viral	
	chemotherapy. Anti-fungal chemotherapy	
Unit 4	Nosocomial infections, prevention of infection,	CO4, CO6
	basics of diagnostic approaches	
Α	Hospital-acquired infections (nosocomial), immune	
	compromised states	
В	Water and waste management for water-borne diseases	
С	Modern approaches for diagnosis of infectious	
	diseases: Basic concepts of gene probes, dot	
	hybridization and PCR assays	
Unit 5	Advanced diagnostic techniques	CO5, CO6
А	DNA diagnostics: PCR based diagnostics; ligation	
	chain reaction, southern blot diagnostics, array-based	
	diagnostics. G-banding, in situ hybridization (FISH and	
	on-FISH), and comparative genomic hybridization	
	(CGH).	
В	Cancer cytogenetics: spectral karyotyping.	
	Immunodiagnostics: diagnosis of infectious diseases,	
	respiratory diseases (influenza, etc.)Viral diseases-HIV	
	etc., bacterial diseases, enteric diseases, parasitic	
C	diseases and mycobacterium diseases.	
С	Phage display, immunoarrays, FACs.

MSB119: Animal Cell Technology

L-T-P: 4-0-0

Credit: 4

School: SBSR		Batch : 2020-2022			
Program: M.Sc.		Current Academic Year: 2020-21			
Branch:		Semester: 2			
Biotechnology					
1 Course Code MSB 119					
2	Course Title	Animal Cell Technology			
3	Credits	4			
4	Contact Hours	4-0-0			
	(L-T-P)				
	Course Status	Compulsory			
5	Course	1. To acquire a fundamental knowledge of animal cell bio	ology		
	Objective	2. To Study cell, tissue culture, media component	25		
	5	3. To Study Cell Cell Kinetics and Characteristic			
		4. To Study Animal cloning, cell genetics			
		5. To Study large scale industrial and medical appl	lications of cell		
		engineering.			
6	Course	After successfully completion of this course students will	be able to:		
	Outcomes	Understand basics of Animal Cell and Tissue cu			
		CO1 media and aseptic techniques of establishing primary and			
		Secondary cell cultures.			
		Establish a continuous cell line from cells of different origin			
		and determine their nutrient and environment requirements			
		CO2 Differentiate between adherent and non-adheren	t cell culture		
		techniques, calculate growth kinetics parameters and apply			
		cryopreservation technique for long-term storing			
		Understanding Somatic and Germ Cell Genetics	, Cell to Cell		
		CO3 communication			
		Scaling up of Cell cultures for industrial and me	dical		
CO4 applications. Understanding Cell cloning					
		culture and Tissue Engineering			
		Applications of Cell Culture Hybridoma Technology and			
		CO5 Applications of Cell Culture, Hybridonia Technology and Antibody production, Stem cell technology			
		Review the future perspectives, importance and ethical issues			
		CO6 related with stem cell technology and transgenic animals.			
7	Course	To acquire a fundamental and advanced knowledge of An	imal Cell Culture		
	Description	Technology by studying cell, tissue culture, media component, Animal			
		cloning, cell genetics and large scale industrial and medical applications of			
	cell engineering.				
8	Outline syllabus	s	CO Mapping

MMB201: Environmental Microbiology and Waste Management

L-T-P: 4-0-0

Sch	ool : SBSR	Batch : 2020 – 22				
Pro	gram: M.Sc.	Current Academic Year: 2020-21				
Bra Biot	nch: echnology	Semester: 3				
1	Course Code	MMB201				
2	Course Title	Environmental Microbiology & Waste Management				
3	Credits	4				
4	Contact Hours (L-T-P)	4-0-0				
	Course Status	Compulsory				
5	Course Objective	 This course provides a comprehensive introduction to microbial ecology and fundamentals of microbial diversity. The course is designed to give students an up-to-date understanding of a wide array of applications of microorganisms in maintaining biogeochemical factors. This course also focuses on concepts of applied environmental microbiology and how microbes can be used for various industrial/research applications. The course also highlights the modern methods of waste 				
6	Course	 4. The course also highlights the modern methods of waste management and significant role of microorganisms in waste and resources management. After the successful completion of this course students will be able to: 				
	Outcomes	 CO1: Comprehend ecological interactions and role of microorganisms played in there and discuss microbial ecology concepts including methods of assessing microbial diversity and studying microbial populations. CO2: Analyze the role of microorganisms in biogeochemical cycles. CO3: Classify different methods of bioremediation and use of microorganisms and plasmids in bioremediation CO4: Explain the commercial application of microorganisms in extraction of metals, oil and in production of biogas. CO5: Identify different methods of waste management and how different microbial metabolic processes can assist in waste management. CO6: To provide a comprehensive introduction to microbial ecology and fundamentals of microbial diversity. 				
7	Course Description	The 'Environmental Microbiology and Waste Management' is a course designed to give students knowledge about basic concepts of environment/ ecosystem and the role microorganisms play in maintaining the ecosystem balance. This course throws light on various unconventional uses of microorganisms in various industries				

		and environmental benefits of use of the microorganisms also outlines various biological methods of waste manag				
		application of microbes in bioremediation.				
	Outline syllabu		CO Mapping			
	Unit 1	Microbial Ecology				
r	А	Ecological Concepts: Introduction to ecosystem; types				
		of ecosystem; food chain and food web; biological				
		magnification and eutrophication				
	В	Microbial diversity: estimates of total number of species;	CO1			
		Shannon and Simpsons indices of microbial diversity,	001			
_		Unculturable bacteria				
	С	Culture independent molecular methods for				
		understanding microbial community- Partial and whole				
		community analysis				
	Unit 2	Role of Microorganisms in Environment				
	А	Role of microbes in biogeochemical cycles: nitrogen				
		cycle: different phases of nitrogen cycle, microbes				
		involved in different stages of nitrogen cycle	CO^{2}			
	В	Carbon, Phosphorous and Sulphur cycle	CO2			
	С	Production of microbial bio-fertilizers, bio-pesticides,				
		soil conditioners to enhance cropyields.				
	Unit 3	Role of Microorganisms in Remediation				
	А	Bioremediation- in situ and ex situ techniques				
	В	Biodegradation of recalcitrant compounds-lignin,	CO3			
		pesticides; Bioaccumulation of metal and detoxification				
	С	Degradation of xenobiotics by microorganisms;				
		Degradative plasmids				
	Unit 4	Role of Microorganisms in Mining and Energy				
		Production				
	A	Microbial technology in mining: Bioleaching;				
		Biomining; Bio-beneficiation				
	В	Recovery of oil and MEOR; Bioconversions	CO4			
	С	Microbial technology for energy production- Concept of	CO4			
		microbial fuel cell- principle; types and applications,				
		Use of microorganisms in the production of biogas				
	Unit 5	Role of Microorganisms in Waste Management				
	А	Landfill- structure and types, involvement of microbes in				
		initial adjustment phase, transition phase, acid phase				
	В	Methane formation and maturation phase of a landfill				
		operation	CO5			
	С	Compositing- types; Design and operational				
		consideration of microbial composting				
-+	Mode of	Theory

MSB204: Genomics

L-T-P: 4-0-0

School : SBSR		Batch : 2020-22				
Prog	gram: M.Sc.	Current Academic Year: 2020-21				
Bra Biot	nch: echnology	Semester: 3				
1	Course Code	MSB 204				
2	Course Title	Genomics				
3	Credits	4				
4	Contact Hours (L-T-P)	4-0-0				
	Course Status	Core				
5	Course Objectives	 To comprehend the basic principles of genomics, so that understanding biological functions and apply for human To acquire knowledge of techniques and strategies understanding a genome 	benefit			
6	Course Outcomes	After successfully completion of this course students will b CO1. Comprehend the fundamentals of genomics and prine sequencing and analysing tools. CO2. Identify the advantages and disadvantages of sequencing methods and choose the appropriate genome ana CO3. Apply the concept of molecular markers and its genome analysis and mapping CO4. Comprehend the fundamentals of functional g comparative genomics and apply it to solve problems CO5. Appreciate the power of microbial genome analysis ar application in industry, agriculture and medicine for human CO6. Be familiar with the different techniques used in geno and choose rationally the appropriate methodology for solvi	ciples of DNA various DNA alysis pipeline. application in genomics and nd its welfare. me analysis			
7	Course Description	This course provides a window to the methods and of genomics in the study of genomics. It gives a glimpse of world microbes that are so diverse at genome level and express unique characters. It will explore how the technique data in general have been used to understand biology. It wi how this diversity can be exploited for various industries.	d applications of the amazing consequently and genomic ll also indicate			
8	Outline syllabus		CO Mapping			
	Unit 1	Genomic Diversity				
	Α	Concept of Genome	CO1			
	В	Principles of DNA sequencing techniques, Automated DNA sequencing, Pyrosequencing, New generation Sequencing methods	CO1, CO6			
	С	Primary, derivative and composite biological databases	CO1, CO6			

Unit 2	Whole Genor	ne Sequencin	g			
A	Whole genom	e sequencing	methods	CO2, CO6		
В	Genome asser			CO2, CO6		
С		Analysis of sequence data (gene prediction, conserved domain prediction, motifs), Metagenomics				
Unit 3	Mapping tecl	nniques				
А	Types of gend	ome maps,		CO3 , CO6		
В			arkers (RFLP, AFLP, EST,	CO3, CO6		
С	Application of markers in mapping techniques, Significance of markers in sequencing projects					
Unit 4	Genomics					
А	Functional gen genomics	CO4				
В	Investigation mutagenesis	CO4, CO6				
С	Comparative genomics					
Unit 5	Application of					
А		nomics and its	application with special latabases	CO5, CO6		
В	Genomics and	l its applicatio	n in agriculture and industry	CO5, CO6		
С			enome project	CO5, CO6

Week	Unit 1	Practical based on					
1							
Week	a	Lab expt.1	Find out the major data bases dealing with primary data				
1-2			along with their home server address.				
Week 3		Lab expt.2	Align all the nucleotide sequences provided using				
			bioedit . Translate one of them into amino acid in all				
			six frames. Give the graphic view and mark the				
			conserved regions.				
	Unit 2	Practical related					
Week 4	b	Lab expt.3	Perform BLAST nucleotide for the nucleotide				
			sequence provided and predict the gene. Report the				
	_		most similar accession number and give its detail.				
		Lab expt.4	To perform ORF scan on the given sequence and find				
			out the viable ORFs.				
Unit 3 Practical based upon		-					
Week 5 a Lab expt.5		Lab expt.5	Perform BLAST and find out the conserved domain				
			number and protein family number for it.				
Week 6	b	Lab expt.6	Prepare a pure culture of a bacterial strain.				
Week 7	Mid tern	n					
	Unit 4	Practical based up	Practical based upon study				
Week 8	a	Lab expt.7	Isolate plasmid from bacterial cells.				
Week	b	Lab expt.8	Perform Restriction digestion of isolated plasmids				
9-10							
	Unit 5	Practical related					
Week	a, b		Conduct PCR for specific Genes in Bacteria				
11-14	and c	Lab expt.9					
		Lab expt.10	Quantify and Analysis Bacterial Genome
