

Program and Course Structure

School of Engineering &
Technology
B. Tech in
Electronics and Communication
Engineering

Programme Code: SET0501

Batch: 2019-2023

Vision, Mission and Core Values of the University

Vision of the University

To serve the society by being a global University of higher learning in pursuit of academic excellence, innovation and nurturing entrepreneurship.

Mission of the University

- 1. Transformative educational experience.
- 2. Enrichment by educational initiatives that encourage global outlook.
- 3. Develop research, support disruptive innovations and accelerate entrepreneurship.
- 4. Seeking beyond boundaries.

Core Values

- Integrity
- Leadership
- Diversity
- Community

Vision and Mission of the School of Engineering& Technology

Vision of the School

To become a globally acclaimed institution of higher learning in engineering and technology promoting excellence in research, innovation and entrepreneurship to provide sustainable solution to the needs of the society

Mission of the School

To impart quality education with strong industry & academic connectivity in the expanding fields of Engineering and Technology in a conducive and enriching learning environment.

To produce technocrats equipped with technical & soft skills and experiential learning required to stay current with the modern tools in emerging technologies to fulfill professional responsibilities and uphold ethical values.

To inculcate a culture of interdisciplinary research, innovation andentrepreneurship to provide sustainable solutions to meet the growing challenges and societal needs.

To foster collaborative learning and to play adaptive leadership role in professional career and pursuit of higher education through effective mentoring and counseling.

Vision and Mission of the Department of ECE

Vision of the Department

To become an internationally acclaimed destination of academic excellence in the discipline of Electrical, Electronics, and Communication Engineering by promoting research, innovation, and entrepreneurship to serve society.

Mission of the Department

- **M1**-To provide comprehensive technical knowledge in Electrical, Electronics and Communication Engineering.
- **M2** To facilitate and foster the industry-academia collaboration to enhance technical skills and employability.
- **M3** To promote interdisciplinary and multi-disciplinary research, innovations and entrepreneurship to serve society.
- M4- To develop core values, professional ethics and lifelong learning skills through interactive support systems.

Program Educational Objectives (PEO)

PEO1: The graduates will demonstrate sound engineering and managerial decisions based on ethical and professional standards.

PEO2: The graduates will work on global technological and environmental issues as a successful entrepreneur.

PEO3: The graduates will achieve a reputation as a source of innovative solutions tocomplex engineering problems.

PEO4:The graduates will pursue higher studies to become successful academicians and lead researchers.

Program Outcomes (PO's)

- **PO1: Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2: Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3: Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4:** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO5: Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- **PO6:** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7: Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO8: Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9: Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- **PO10:** Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- **PO11: Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one sown work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- **PO12:** Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific Outcomes

PSO1: Ability to adapt the emerging embedded system technologies for designing and prototyping

PSO2: learning recent technologies as Internet of Things (IoT) and Mobile Communication to provide technical solutions to societal needs.

PSO3: Develop hardware, and firmware for automated solutions to solve Industrial problems

SYLLABUS TERM-I

Programming for problem solving

Sc	chool: SET Batc	h						
	ogram: B.Tech	11						
	urrent Academi	c Vear						
	ranch: ECE	C Teal.						
	emester:1							
1	Course Code	CSE113 Course Name: Programming for problem solving						
2	Course Title	Programming for problem solving						
3	Credits	4						
4	Contact Hours(L- T-P)	3-0-2						
	Course Status	Core						
5	Course	1. Learn basic programming constructs –data types, decision						
	Objective	structures, control structures in C						
		2. learning logic aptitude programming in c language						
3. Developing software in c programming								
6 Course After completion of Course Students will be able to:								
	Outcomes	CO1: demonstrate the algorithm, Pseudo-code and flow chart forthe						
	given problem.							
		CO2: develop better understanding of basic concepts of C						
		programming.						
		CO3: create and implement logic using array and function.						
		CO4: construct and implement the logic based on the concept ofstrings and pointers.						
		CO5: apply user-defined data types and I/O operations in file.						
		CO6: design and develop solutions to real world problems using C.						
7	Course	Programming for problem solving gives the Understanding of C						
′	Descri	programming and implement code from flowchart or algorithm						
	ption	programming and implement code from nowchart or algorithm						
8	Outline syllabu	S						
	Unit 1	Logic Building						
	A	Flowchart: Elements, Identifying and understanding input/output, Branching and iteration in flowchart						
	В	Algorithm design: Problem solving approach(topdown/bottom up approach)						
	С	Pseudo Code: Representation of different construct, writing pseudo-code						
		from algorithm and flowchart						
	Unit 2	Introduction to C Programming						
	A	Introduction to C programming language, Data types, Variables, onstants, Identifiers and keywords, Storage classes						
	В	Operators and expressions, Types of Statements: Assignment, Control, jumping.						
	C	Control statements: Decisions, Loops, break, continue						
	Unit 3	Arrays and Functions						
	A	Arrays: One dimensional and multi dimensional arrays: Declaration, Initialization and array manipulation (sorting,						

	searching).						
В		claration/Prototyping and Call byvalue, Call by reference.	ling, Types of functions,				
С	Passing and Returning Ar	rays from Functions, Recursiv	eFunctions.				
Unit 4	Pre-processors and Poin	nters					
A	Macros: Types, Use, pred						
В		claration of pointer variables, C s andpointers, Dynamic memo					
С	String: Introduction, pred Command Line Argumen	lefined string functions, Manipats.	oulation of text data,				
Unit 5	User Defined Data Type	es and File Handling					
A		Structure and Unions: Introduction, Declaration, Difference, Application, Nested structure, self-referentialstructure, Array of structures, Passing structure in function					
В	Files: Introduction, conce Files: Indexed file, seque	ept of record, I/O Streaming annual file andrandom file,	nd Buffering, Types of				
С		ning and closing a data file, Va a or records in file, adding reco andom file.					
Mode of examination	Theory

Schoo	ol: SET	Batch:
Progr	am: B.TECH.	Current Academic Year:
Branc		Semester: II
CSE/I	EC/EEE	
1	Course Code	PHY 117
2	Course Title	Semiconductor Physics
3	Credits	4
4	Contact Hours (L-T-P)	3-1-0
	Course Status	Compulsory
5	Course Objective	To make students proverbial with the fundamental concepts of Semiconductors materials and their real life applications for configuring various electronics devices.
6	Course	After the completion of this course, students will
	Outcomes	CO1: learn the various fundamental theory of materials and concept of solid classification.
		CO2: learn the fundamental concepts of mobility, conductivity, electrons and holes in an intrinsic semiconductors, Donor and Acceptor impurities (n-type and p-type semiconductor), Fermi levels etc.
		CO3: gain knowledge about the formation of depletion region, barrier potential, Zener diode, Characteristics of Zener diode etc. CO4: have a clear understanding of Coherent sources, interaction of radiation with matter (spontaneous and stimulated emission), Einstein's relation, population inversion and pumping, etc. CO5: learn the concept of optical sources: Light emitting diode (construction, basic working principle), semiconductor laser (construction, basic working principle), and optical detectors. CO6:be familiar with the essential concepts of Semiconductors materials technology and their applications in industries.
7	Course Description	This course provides the basic foundation for understanding electronic semiconductor devices and their applications and limitations. It has introductory elements of various concept of material science. This course is essential for students who desire to specialize their engineering in Computer Sciences, Electronics, and Electronics and Electrical engineering.
8	Outline Syllabus	

	Unit 1	Physics of Semiconductor	•					
	A	Introduction, classical free	electron theory (Lor	entz-Drude theoryand				
		limitations), Quantum theor	ry of free electron					
	В	Fermi energy, effect of ter	nperature on Fermi-L	Dirac distribution				
		(qualitative analysis)	-					
	С	Energy bands, Classification of Solids on the basis of energy band.						
	Unit 2	Transport phenomena in	semiconductors	3,				
	A	Mobility, conductivity, electrons and holes in an intrinsic semiconductors,						
		Donor and Acceptor impurities (n-type and p-type semiconductor)						
	В	Fermi levels, carrier densit	ies in semiconductor					
	С	Concentration of electrons	in conduction band ar	nd holes in valenceband, Drift				
		and diffusion current, Hall	effect.					
	Unit 3	p-n Junction						
	A	p-n junction, types of p-n j	unction (step-graded	and Linearly-graded				
		junction)						
	Zener							
		diode, Characteristics of Zener diode Avalanche and Zener breakdown, comparison of Zener diode and pn june						
	С							
		diode, concept of tunneling	_					
	Unit 4	Laser Physics						
	A	Coherent sources, interaction	on of radiation with m	atter (spontaneousand				
		stimulated emission), Einstein"s relation						
	В	Population inversion and pu	amping, active compo	onents of laser, optical				
		amplification or gain						
	С	Threshold condition for la	ser action, three and	four level lasers,Ruby and				
		He-Ne lasers.						
	Unit 5	Optoelectronic Devices						
	A	Optical sources: Light emi	tting diode (construct	ion, basic working principle),				
		semiconductor laser (constr						
	В	Optical detectors: photodio	de (working principle), p-i-n photodiode				
		(working principle),						
	С	Photovoltaic effect, p-n june	ction solar cell (basic	working idea).

Sch	ool: SET	Batch:			
	gram: B.Tech.	Current Academic Year:			
	nch: ME, EC,	Semester: I			
	CE	Schester. 1			
1	Course Code	MTH 141			
2	Course Title	CALCULUS, ANALYSIS AND LINEAR ALGEBRA			
3	Credits	4			
4	Contact Hours	3-1-0			
	(L-T-P)				
	Course Status	Compulsory			
5	Course Objective	The objective of this course is to familiarize the prospective engineers with techniques in calculus, multivariate analysis and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.			
6	Course Outcomes	CO1: Explain the concept of differential calculus, illustrate the curvature and Maxima, minima and saddle point by using Method of Lagrange (K2,K3, K4).			
		CO2: Explain the concept of integral calculus, describe Beta and Gamma function, calculate multiple integration and evaluate area and volume (K1, K2, K3, K4, K5).			
		CO3:Describe the concept of sequence and series; discuss the test of convergence to evaluate convergence of series. (K1, K2,K3, K5)			
		CO4: Discuss the basic of vector calculus; illustrate gradient, curl and divergence. (K1, K3)			
		CO5: Describe and use the concepts line and surface integral for scalar and vector, explain the Green theorem. (K1,K2,K3, K4)			
		CO6: Explain the basic concepts matrices and determinate, evaluate system of linear equation by using rank and inverse method, calculate Eigen values and Eigen vectors; Diagonalization of matrices; Cayley - HamiltonTheorem.(K2,K 3,K4, K5)			
7	Course Description	This course is an introduction to the fundamental of Mathematics. The primary objective of the course is to develop the basic understanding of differential and integral calculus, sequence and series, vectorcalculus and linear algebra.			
8	Outline Syllabı	, •			
	Unit 1	Differential Calculus			
	A	Differentiation, Taylor's and Maclaurin's theorems			
		with remainders; indeterminate forms and L' Hospital'srule			
	В	Limits and continuity for multivariable and Partial derivatives, Euler theorem total derivative; Tangent plane and normal line (basic concepts)			
	C				
	C	Expansion of functions of several variables, Maxima,			

		minima and saddle noints	· Method of Lagrangemultir	nliers			
		minima and saddle points; Method of Lagrangemultipliers.					
	Unit 2	Integral Calculus					
•	A		ns and their properties; Mul	tiple Integration:			
			an), change of order of integr	1 0			
		integrals					
	В	Change of variables (Cart	Change of variables (Cartesian to polar), Applications: areas and volumes,				
		Center of mass					
	С		n), Simple applications oftri	ple integration			
	Unit 3	Sequences and series					
	A	Convergence of sequence	and series				
	В		nparison test, D" Alembert's	sratio test			
	С	Raabe's test, Cauchy root	test,Power series				
	Unit 4	Vector Calculus					
	A)	ence, Scalar line integrals				
	В	vector line integrals, scala	•				
	С		Theorems of Green"s theorem	n			
	Unit 5	Matrices					
	A	Inverse and rank of a matrix, System of linear equations					
	В	Symmetric, skew-symmetric and orthogonal matrices; Determinants					
	C	Eigen values and Eigen vectors; Diagonalization ofmatrices; Cayley -					
		Hamilton Theorem					
	Mode of	Theory

Computer Aided Design & Drafting Lab

	Computer Aided Design & Drafting Lab						
Scl	hool: SET						
Ba	Batch:						
Pro	Program: B.Tech						
Cu	Current Academic Year:						
Br	anch:ECE						
Sei	mester: I						
1	Course Code	MEP 106					
2	Course Title	Computer Aided Design & Drafting Lab					
3	Credits	1.5					
4	Contact Hours	0-0-3					
	(L-T-P)						
	Course Status	Compulsory					
5	Course Objective	The objective of this introductory course is to make students familiar					
		with computer-aided drafting/ design, introduce them about the basic					
		commands, tools and dimension techniques for creation and					
		presentation of various engineering drawing by using AutoCAD					
		software which helps in visualization and problem solving in					
		engineering disciplines.					
6	Course	After averageful completion of this course the student will be ship to					
0	Course	After successful completion of this course the student will be able to:					
	Outcomes	CO1: Understand the fundamental features of AutoCAD workspace and user interface.					
		CO2: Apply the fundamental tools such as draw, edit, and view for					
		creating two dimensional engineering drawings in AutoCAD.					
		CO3: Choose advance features to present an engineering drawing in					
		AutoCAD					
		CO4: Apply text and dimension features in the engineering drawing					
		CO5: Create different orthographic projections from a pictorial view.					
		CO6: Analyze an engineering drawing and use the software packages					
		for drafting and modeling.					
7	Course	This introductory course is offered to students to make them					
	Description	proficient in design, layout, product development, and other careers					
	1	that require technical drawing. Using the current version of the					
		AutoCAD software, students will learn a variety of drawing					
		techniques and be able to replicate specific drawings in multiple					
		perspectives. The pinnacle of the class is to empower and enable					
		students to create using the software provided. Career opportunities					
		and 3-D modelling, manufacturing, and engineering will also be					
		explored. No drafting or computer experience is necessary.

5	Course	To provide the students with an introductory concept in the field of						
	Objective	electrical and electronics engineering to facilitate better understanding of						
		the devices, techniques and equipment"s used in engineering						
		applications.						
6	Course	After completion of Course Students will be able to:						
	Outcomes	CO1: To analyze and solve basic electrical circuits						
		CO3: To understand the working principle of transformer and identify its						
		applications.						
		CO3: To understand the working principle of dc and ac motors and						
		identify the starting methods of single-phase induction motor						
		CO4: To apply the basics of diode to describe the working of rectifier						
		circuits such as half and full wave rectifiers						
		CO5: To apply the concepts of basic electronic devices to design various						
		circuits						
		CO6:Apply the basic concepts in Electrical and Electronics Engineering						
7	Course	for multi-disciplinary tasks This initial course introduces the concents and fundamentals of electrical						
′	Course	This initial course introduces the concepts and fundamentals of electrical and electronic circuits and devices. Topics include basic circuit analysis,						
	Description	diode and transistor fundamentals and applications. This course also						
		introduces working principle and applications of dc/ac motors and						
		transformers.						
8	Outline syllab							
	Unit 1	DC & AC Circuits (6 lectures)						
	A	Electrical circuit elements (R, L and C), series and parallel						
		circuits, concept of equivalent resistance, Kirchhoff currentand voltage						
		laws, star-delta conversion						
	В	Analysis of simple circuits with dc excitation and Superposition Theorem,						
		Representation of sinusoidal						
		waveforms, peak and rms values, real power, reactive power, apparent						
		power, power factor						
	С	Introduction to three phase system, relationship betweenphase						
		voltages and line voltages						

Unit 2	Transformer(4 lectures)				
A	Working principle and construction of transformer, EMFequation				
В	Efficiency of transformer, Power and distributiontransformer				
	and difference between them				
С	Transformer applications in transmission and distribution ofelectrical				
TT 1. 4	power				
Unit 4	Electrical Motors (6 lectures)				
A	Construction, working principle, torque-speed characteristicand applications of dc motor.				
В	Construction, working principle and applications of a three-phase				
induction motor, significance of torque-slip characteristic					
C	C Working principle starting methods and applications of single phas				
	induction motor				
Unit 4	Semiconductor Diode and Rectifier (5 lectures)				
A	PN junction and its biasing				
В	Semiconductor diode, ideal versus practical diode, VIcharacteristics of				
	diode				
C	Half wave and full wave rectifiers with and without filters.				
Unit 5	Transistors (5 lectures)				
A	Bipolar Junction Transistor (BJT) – Construction, workingprinciple and input-output characteristics				
В					
С	BJT as CE amplifier and as a switch Introduction to JFET

Principles of Electrical and Electronics Engineering Lab

School: SET Batch: 2019-2023 Program: B.Tech

Current Academic Year: 2018-2019

Branch: ECE Semester: II

	Semester: II					
1	Course Code	EEP112				
2	Course Title	Principles of Electrical and Electronics Engineering Lab				
3	Credits	1				
4	Contact Hours	0-0-2				
	Course Status	Compulsory				
5	Course Objective	To provide the students with an introductory concept in the field of electrical and electronics engineering to facilitate better understanding of the devices, techniques and equipment"s used in engineering applications.				
		After successful completion of this course the student will be able to:				
	Outcomes	CO1: To configure and analyze any given circuit.				
		CO2: To inspect the working of transformer and calculate its efficiency				
		CO3: To understand the working of dc and ac motors and measure its various operating				
		parameters. CO4: To design rectifier circuits such as half and full wave rectifiers and observe its				
		output waveforms.				
		CO5: To obtain the characteristics of BJT.				
		CO6:Apply the basic concepts in Electrical and Electronics Engineering for multi-				
		disciplinary tasks.				
7	Course	This initial course introduces the concepts and fundamentals of electrical and electronic				
	Description	circuits and devices. Topics include basic circuit analysis, diode and transistor				
		fundamentals and applications. This course also introduces working principle and				
-	0 41 11 1	applications of dc/ac motors and transformers.				
8	Outline syllabus					
	Unit 1	Practical based on DC & AC Circuits				
		To configure a dc circuit on breadboard, and measure voltage/currentacross/through each element				
		To verify Kirchhoff's Laws				
		To verify Superposition Theorem				
		To find the real power, reactive power, apparent power and power factor of RL & RC load				
	Unit 2 Practical related to Transformers					
To find the efficiency of transformer by obtaining its losses.		To find the efficiency of transformer by obtaining its losses.				
	Unit 3	Practical related to Electrical Motors				
		To study cut-section of DC motor and induction motor.				
		To start the DC motor and reverse its direction of rotation.				
		To start an induction motor and reverse its direction of rotation.				
	Unit 4 Practical related to Diode and Rectifier					
		To determine voltage-current characteristic of diode				
		To assemble and test half wave and full wave rectifier circuits for theirinput and output waveform				

	Unit 5	Practical related to Transistors				
		To determine input and output characteristics of BJT				
		Validation of BJT as a switch				
	Mode of examination	Practical

2	Course Title	Calculus and Abstract Algebra		
3	Credits	4		
4	Contact Hours (L-T-P)	3-1-0		
	Course Status	Compulsory		
5	Course Objective	The objective of this course is to familiarize the prospective engineers with techniques in basic calculus and linear algebra. It aims to equip the students with standard concepts and tools at an intermediate to advanced level that will serve them well towards tackling more advanced level of mathematics and applications that they would find useful in their disciplines.		
6	Course Outcomes	CO1: Explain the concept of differential calculus, illustrate the curvatureand Maxima, minima and saddle point. (K2, K3, K4) CO2: Explain the basic concepts matrices and determinate, evaluate system of linear equation by using rank and inverse method. (K2, K3, K5)		
		CO3: Explain the basic concept of sets, relation, functions, groups Rings and Field. (K2, K4)		
		CO4: Discuss the basic of Vector spaces. (K1, K3)		
		CO5: Describe and use the linear transformation and evaluate nullity and kernel. (K1, K2, K3, K5)		
		CO6:Explain the concept of Eigen values and Eigen vectors; evaluate the diagonalization of matrices, explain the basic introduction of Inner product spaces.(K2, K3, K4, K5)		
7	Course Description	This course is an introduction to the fundamental of Mathematics. The primary objective of the course is to develop the basic understanding of differential and integral calculus, linear Algebra and Abstract Algebra.		
8	Outline syllab	ous: Calculus and Abstract Algebra		
	Unit 1	Calculus		
	A	Differentiation, Taylor's and Maclaurin theorems withremainders; indeterminate forms, L' Hospital's rule.		
	В	Maxima and minima, Partial derivatives, Euler'stheorem.		
	С	Total derivative. Evaluation of double integration.		

		Applications of double integral (to calculate area).				
	Unit 2	Matrices				
	A	Matrices, vect	ors: addition a	nd scalar multiplication, matrix multiplication.		
	В		-	linear Independence, rankof a matrix,		
		determinants,	Cramer's Rule			
· ·			limination and Gauss-Jordanelimination.			
	Unit 3	Basic Algebra				
	A	, , , , , , , , , , , , , , , , , , ,	and functions			
	В	Basics of groups, cyclic groups.				
	С	0 1	sics of Rings a	and Field.		
	Unit 4	Vector spaces				
	A			ence of vectors, basis, dimension.		
	В	Linear transfo and nullity.	Linear transformations (maps), range and kernel of alinear map, rank			
	C	Inverse of a li	near transform	ation, Matrix associated with a linear map.		
	Unit 5	Vector spaces (Prerequisite Module 2 –Matrices & Module-4 Vector spaces)				
	A	Eigenvalues, Eigenvectors				
	В	Symmetric, skew-symmetric, and orthogonal Matrices, Diagonalization				
	С	Basic introduction of Inner product spaces, Gram-Schmidt ortho gonalization

2	Course Title	Electricity and Magnetism			
3	Credits	3			
4	Contact Hours	2-1-0			
	(L-T-P)				
	Course Status	Compulsory			
5	Course Objective	To make students familiar with the concepts of electrostatics, magnetostatics and electromagnetism and to utilize the laws of electromagnetism on various problems.			
6	Course Outcomes	At the end of the course, the student will be able to: CO1: learn the basic concepts of electrostatics.			
		CO2: learn the fundamental concepts of electric potentials.			
		CO3: gain knowledge about the principle of capacitor, dielectrics			
		materials and electric polarization. CO4: have a clear understanding of fundamentals of magnetic effects of current and magnetism. CO5: learn the concept of Maxwell's Equations in differential and			
		integral form and their physical significance. CO6: learn the fundamental concept of electricity and magnetism.			
7	Course Description	Today, life without electromagnetic technologies is almost unthinkable. For this reason, it is critically significant to understand the basic fundamental of this paper. This course is able to explain the required basic knowledge. Both electricity and magnetism may be understood as forces that seek balance and students learn to understand such concepts as charge, field, voltage, potential, current, resistance, and power within this framework.			
7	Outline Syllabu	7 2			
	Unit 1	Electrostatics			
	A	Introduction to the course and prerequisites required Coulomb"s law—			
		force between two point charges, forces between multiple charges; superposition principle and continuous charge distribution.			
	В				
	Ь	Electric field, electric field due to a point charge, electric flux.			
	С	Gauss"s theorem and its applications to find field due to infinitely long			
		straight wire, uniformly charged infinite plane sheet and uniformly			
		charged thin spherical shell (field inside and outside), charged solid			
		sphere.			
	Unit 2	Potential			
	A	Electric potential, potential difference, electric potentialdue to a point			
	11	charge,			
В		a dipole and system of charges; equipotential surfaces,			
С		Electrical potential energy of a system of two point charges and of			
		electric dipoles in an electrostatic field.			
	Unit 3	Capacitance			
	A	Conductors and insulators, free charges and bound charges inside a			
	1.	conductor. Dielectrics and electric polarization.			
		Conductor. Diefecties and electric bolarization.			

			Beyond Boundaries	
В	Capacitors and capacitance, capacitance of a parallelplate,			
	Cylindrical and spherical capacitors.			
С	Capacitance with and without dielectric medium betweenthe plates of			
	capacitor, energy stored in a capacitor.			
Unit 4	Magnetic Effects of (Current and Magi	netism	
A	Biot-Savart law and	its application to	current carryingcircular loop,	
В	Ampere's law and its	applications to infi	initely longstraight wire.	
С	Ampere"s law and its	applications to toro	oidal solenoids.	
Unit 5	Electromagnetism			
A	Electromagnetic induction; Faraday"s law, induced emfand induced current,			
В	Lenz"s Law, displacer	ment current.		
C	Maxwell"s Equations	in differential and i	integral formand their	
	physical significance.

5	Course Objective	 Make it comprehended the importance of clean water. Describe to the basic concepts of spectroscopy as described in the module content and is to teach getting of valuable information from the same to apply in various engineering applications. To provide an introduction to the basic concepts in 			
		Electrochemistry and apply them to understand batteries and corrosion. 4. To equip the students with the knowledge of modern technologies i.e. nanotechnology and its various engineering applications.			
6	Course	Students will be able to understand:			
	Outcomes	Realize the importance of clean and healthy water by giving knowledge about water quality parameters and cleaning measures.			
		2. In sighting the structural features of material by having the knowledge of spectroscopic techniques.			
		3. State the main cause of corrosion and prevention measures. Name the components of galvanic cell and applies these to the understand the batteries and corrosion of a metal.			
		4. Able to apply the basic information of engineering materials and their applications.			
		5. Able to have a basic knowledge of technology in modern days i.e. Nanotechnology and its various applications.6. Have a thorough grounding in chemistry and a working knowledge of advanced chemistry.			
7	Course Description	The course includes the fundamentals of Thermodynamics, Electrochemistry and batteries, corrosion, introduction to Chemistry of Materials, water technology and nanotechnology. This course satisfies the requirements of the Engineering program.			
8	Outline syllabus				
	Unit 1	Water: Analysis and its treatment			

*	SHARDA
	UNIVERSITY

	8 eyond Boundaries					
A	Water and water treatment: Drinking water standards, Water quality					
	parameters and their measurement: pH (alkalinity and acidity -					
	determination by titrimetry), Turbidity, Dissolved Oxygen (DO), biological					
	oxygen demand (BOD), chemical oxygen demand (COD), chloride,					
	fluoride, oil and fats,					
В	hardness (definition and expression, estimation of hardness (EDTA					
	method), nutrients (N, P, etc.), nitrate, dissolved metals.					
С	Municipal water treatment process - screening, sedimentation,					
	flocculation; Coagulation, Filtration (Slow sand and rapid sand),					
	disinfaction-chlorination.					
Unit 2	Spectroscopic studies of materials					
A	Principles of spectroscopy and selection rules. Electronic spectroscopy:					
	basic principle, "Lamberts Beer"s law,					
В	chromophore, effect of conjugation on chromophore and applications,					
С	Fluorescence and its applications in medicine. Resignation and applications of Nuclear magnetic					
	Basic principle and applications of Nuclear magnetic					
TT 1.0	resonance and magnetic resonance imagingspectroscopy.					
Unit 3	Electrochemistry, energy storage devices andcorrosion					
A	Electrochemistry: Redox reactions, Nernst Equation, relation of e.m.f.					
	with thermodynamic functions ($\Delta H, \Delta F$ and ΔS). Electrochemical cells-					
В	Galvanic cells and Concentration cell, electrode potentials and its					
	relevance to oxidation and reduction, measurement of EMF under standard					
	conditions, determination of pH using Hydrogen electrode,					
C	primary battery: dry cells, secondary battery: Lead acidaccumulator and Li					
	Ion, fuel cells: H 2- O 2 .Corrosion: Types of corrosion, mechanism of					
	Electrochemical corrosion, galvanic corrosion and protection against					
	electrochemicalcorrosion.					
Unit 4	Chemistry of materials					
A	:Structure, properties and application of carbon materials such as diamond,					
	graphite, fullerenes, graphene. Liquid crystals: classification, Molecular					
	ordering, identification, polymeric liquid crystals, and application of liquid					
	crystals: displays and thermography.					
В	Organic and inorganic semiconductors.Basic concepts of Conducting					
	polymer, types,p-doping, n-doping, comparison with metallic conductors,					
	examples and applications.					
С	Biodegradable polymers: Basic information with common					
	Biodegradable polymers. Dasie information with common					
	examplesPolyglycolic acid (PGA), Polyhydroxy butyrate (PHB),					
	Polyhydroxybutyrates-co-beta hydroxyl valerate(PHBV),					
	Polycaprolactone(pcl).					
Unit 5	Nano science and technology					
A	Introduction to nanoscience and technology, bio-anoinformation,					
D	lithography and lithography Din non nonalithography CNT%					
B	lithography, soft lithography, Dip pen nanolithography, CNT"s					
	Application of nanotechnology in microelectronics and memory devices.

5	Course	1. To learn methods for preparation of solution of different
	Objective	concentration, their standardization
		2. To learn quantitative estimation of different chemical species
		by various volumetric methods.
		3. To understand the practical concepts of reaction kinetics4. To understand the procedure for testing of COD of water
		samples.
6	Course	CO1.Prepare solutions of different strength and standardize them.
	Outcomes	CO2.Estimate water alkalinity and hardness and hence water quality,
	Outcomes	the chloride ion/residual chlorine after disinfection
		CO3.Understand the different order of reactions like Zero, First and
		Second order.
		CO4. Prepare simple thermosetting polymers at small scale inlaboratory.
		CO5.Understand the importance of microbial free water by testing for
		COD.
		CO6.Understand the basics of analytical chemistry which may be
		helpful to perform major engineering applications.
7	Course	This course includes various titration methods like acid-base
'	Description	titration, complexometric titration, precipitation titration etc. It also
	Description	describe various calculations and units frequently used in analytical
		chemistry.
8	Outline syllabu	, , , , , , , , , , , , , , , , , , ,
	Unit 1	Preparation of standard solution
	A	To prepare N/10 normality solution of sodium carbonate and use it to
		standardize the given hydrochloric acid solution.
	В	To prepare N/30 normality solution of potassium
		dichromate and use it to standardize the given hyposolution.
	С	To determine the strength of given HCl solution bytitrating with
		standard NaOH solution by (a)Indicator method (b) pH metrically
	Unit 2	Analysis of water
	A	To determine the amount and constituents of alkalinity of given water
		sample.

В	To determine	the hardness	of water by EDTA method.	
C	To determine	the chloride of	content in water by Mohr"sMethod.	
D	To determine	the residual	chlorine in the given watersample.	
Unit 3 Synthesis of polymer				
A	Preparation of	f Bakelite and	Urea formaldehyde resin.	
Unit-4	Determination	on of kinetic p	arameters	
	To determine of an ester cat		ant and order of the reaction of hydrolysis acid.	
	To determine	To determine the rate constant of hydrolysis of ethyl		
	acetate with	NaOH and sh	ow that the reaction is ofsecond order.	
Unit-5	Determination of COD			
	To determine sample.	To determine the chemical oxygen demand (COD) in the given water sample.

TERM-III

Sch	ool: SET	Batch:
Pro	gram: B.Tech.	Current Academic Year:
	nch: ECE	Semester: III
1	Course Code	MTH 145
2	Course Title	Probability and Statistics
3	Credits	4
4	Contact Hours	3-1-0
	(L-T-P)	
	Course Status	Compulsory
5	Course	The objective of this course is to familiarize the students with
	Objective	statistical techniques. It aims to equip the students with standard
		concepts and tools at an intermediate to advanced level that will serve
		them well towards tackling various problems in the discipline.
6	Course	CO1: Explain the concept of probability and Random Variable.
	Outcomes	(K2,K3, K4)
		CO2: Explain the concept of distribution functions, densities
		and probability distributions; illustrate discrete and continuous
		probability distributions. (K1, K2, K3, K4)
		CO3: Describe the concept of moments, skewness and Kurtosis;
		evaluate correlation and regression – Rank correlation; discuss
		bivariate distributions and their properties (K1, K2, K5)
		CO4: Discuss the basic of Curve fitting by the method of least
		squares; evaluate straight lines, second degree parabolas and more
		general curves. (K1, K2, K5)
		CO5: Describe and use the concepts test of significance: Large sample
		test for single proportion, difference of proportions; calculate single
		mean, difference of means, and difference of standard deviations.
		(K1,K2,K3)
		CO6: Explain the basic concepts of tests of small samples- Student"s
		T test, Chi-square test for goodness of fit, and evaluate the result.
		(K2, K4, K5)
7	Course	
'	Description	This course is an introduction to the fundamental of Mathematics. The
	Description	primary objective of the course is to develop the basic understanding
		of statistics including measures of central tendency, correlation and
		regression, statistical methods of data sampling, probability and
		random variables and various discrete and continuous probability
		distributions and their properties.
8	Outline syllabu	s :Probability and Statistics
	Unit 1	Basic Probability
	A	Probability spaces, conditional probability, Bayes' rule.
		Discrete random variables, Independent random
	В	variables

С					
	Expectation of Discrete Random Variables, Chebyshev's Inequality				
Unit 2	Discrete and Continuous Probability Distributions				
A	Discrete Probability distributions: Binomial, Poisson.				
В	Continuous random variables and their properties, distribution				
	functions and densities.				
С	Normal, exponential and gamma distribution.				
Unit 3	Statistics				
A	Moments, skewness and Kurtosis.				
В	Correlation and regression – Rank correlation.				
C	Bivariate distributions and their properties.				
Unit 4	Applied Statistics				
A	Curve fitting by the method of least squares- fitting of				
	straight lines, second degree parabolas and moregeneral curves.				
В	Test of significance: Large sample test for singleproportion,				
С	Difference of proportions, single mean, difference ofmeans, and difference of standard deviations.				
Unit 5	Testing Hypothesis				
A	Test for single mean, difference of means				
В	test for ratio of variances				
C	Chi-square test for goodness of fit and independence of attributes

	A	Zener diode: Equivalent circuit of Zener diode and V- I
		characteristics. Principle of operation of Zener diode as voltage
		regulator.
	В	Light Emitting Diodes (LEDs): p-n Junction andgeneral
		applications.
	С	
	Description Outline syllabus Unit 1 A	After completing this course students will be able to design the different types of circuits with the help of E-CAD tools and compare the measured and simulated results. Types of Diodes (Special Diodes) Zener diode: Equivalent circuit of Zener diode and V- I characteristics. Principle of operation of Zener diode as voltage regulator. Light Emitting Diodes (LEDs): p-n Junction andgeneral structure of LED. Emission of light, characteristics and its

	applications.Schottky diodes:Structure of metal- semiconductorjunction,					
	characteristics.					
Unit 2	Bipolar Junction Transistor (BJT)					
A	Basics introduction of BJT, Modes of operation, Structure of actual transistor, Ebers-Moll (EM)Model.					
В	Circuit symbol and conventions for n-p-n and p-n-p transistor. The Early Effect, input and output characteristics of BJT in CB, CE, and CC.					
С	BJT as an amplifier and switch, BJT circuit at DC,Different types of biasing i BJT amplifier circuit. Small-signal operation and Hybrid- π model.					
Unit 3	Junction Field Effect Transistors (J-FET)					
A	Junction Field Effect Transistor:Basic ideas – Fieldeffect, Reverse bias of					
	gate voltage, Gate voltage controls drain current, Schematic symbol					
В	Construction and characteristic of JFETs (n-channel and p-channel), Voltage					
	controlled resister, Transfer Characteristics					
C	J-FET Biasing Configuration: Fixed bias, Self bias, and Voltage-divider					
	biasing.					
Unit 4	Metal Oxide Semiconductor Field EffectTransistors (MOS-					
	FET)					
A	Metal Oxide Semiconductor (MOS) Structure, The MOS system under					
	external bias, Operation of MOS					
	transistor, Formation of channel, Enhancement and Depletion MOSFET.					
В	MOSFET current-voltage (I _D -V _{DS}) characteristics forn-MOS and p-MOS. Drain current (I _D) equation inlinear and saturation mode.					
C	Application of MOSFET as an amplifier and switch.					
Unit 5	Differential, multi-stage and operational amplifiers					
A	Differential amplifier, power amplifier, direct coupledmulti-stage amplifier.					
В	Internal structure of an operational amplifier, idealop-amp.					
С	Non-idealities in an op-amp (Output offset voltage, input bias current, input					
	offset current, slew rate, gainbandwidth product)

4	Contact	3-1-0						
	Hours							
	(L-T-P)							
	Course	Compulsory						
	Status							
5	Course Objective	The main aim of this course is to make aware students with basics of signals and systems.						
		 To explain the basic of systems that we use for communication and design purpose. 						
		To basics of LTI system and their solutions.						
		To acquire knowledge about Fourier Transform and its significance in signal analysis.						
		To acquire knowledge about Z-Transform and its use to solve difference equations.						
6	Course Outcomes	After successful completion of this course the student will be able to: CO1: To learn and analyze the concepts of continuous time and discrete time						
		systems.						
		CO2:Analyse systems in complex frequency domain. CO3:Understand sampling theorem and its implications.						
		CO3: Onderstand sampling theorem and its implications. CO4: Analyze difference equations using Z-Transform.						
		CO5: To Sampling and reconstruction of a signal.						
		CO6: Analyse the real time systems by using various types of Transforms.						
7	Course	This course is about various classifications of both continuous and discrete						
	Description	time signals and systems. The spectral analysis of periodic & aperiodic						
		signals using Fourier Series and Fourier transform is discussed for both CT as						
		well as for DT signals. Analysis and characterization of the CT-LTI systems						
		through Laplace Transform and Fourier Transform and for LTI-DT systems						
0	Outling avilate	through Z Transform and DTFT is also discussed.						
8	Outline syllab Unit 1	Introduction to signals and system						
	A	Introduction to signals, Types of signals, Transformation inIndependent						
		variable.						
	В	Energy and power signals, continuous and discrete timesignals, continuous and discrete amplitude signals.						
	С	System properties: linearity, additivity and homogeneity, shift-						

SIL/SET/R.ECH-ECE Page 72.

	invariance, causality, stability, realizability					
Unit 2	LTI System					
A	Continuous time and discrete time LTI systemsTheir properties.					
В	Convolution Sum and convolution Integral.					
_	Characterization of causality and stability of linear shift-invariant systems.					
С	System representation through differential equations and Difference equations.					
Unit 3	Fourier Transform					
A	Periodic and semi-periodic inputs to an LSI system, the notion of a frequency					
	response and itsrelation to the impulse response, Fourier series representation,					
	the FourierTransform.					
В	Convolution/multiplication and their effect in the frequency					
	domain, magnitude and phase response, Fourier domainduality					
C	The Discrete-Time Fourier Transform (DTFT) and the Discrete Fourier					
	Transform (DFT). Parseval"s Theorem. The idea of signal space and orthogonal					
Unit 4	Z-Transform					
A	Z-transform, ROC, Unit circle, with DTFT.					
В	Properties, Inverse ZT.					
С	Solving difference equation using ZT					
Unit 5	Sampling and Laplace Transform,					
A	State-space analysis and multi-input, multi-output representation. The state-					
	transition matrix. The Sampling Theorem. Reconstruction: ideal interpolate					
	Aliasing and its effects. Relation between continuous and discrete timesyster					
В	The Laplace Transform, notion of eigen functions of LSI systems, a basis of					
	eigen functions, region of convergence,					
C	Poles and zeros of system, Laplace domain analysis, solutionto differential					
7.5.1.0	equations and system behaviour.

TERM-IV

School: SET Batch:

Program: B. Tech.

Current Academic Year:

Branch: ECE Semester: 04

DCI	emester: 04					
1	Course Code	ECE246				
2	Course Title	Network Analysis and Synthesis				
3	Credits	3				
4	Contact	3-0-0				
	Hours(L-					
	T-P) Course Status	Commulación				
	Course Status	Compulsory				
5	Course Objective	To develop problem solving skills and understanding of network and systems through the application of techniques and principles of signals and network analysis to common circuit problems.				
6	Course Outcomes	After successful completion of this course the student will be able to: CO1: Analyse signals and systems and its properties. CO2: Understand and design the circuits using Network Theorems CO3: Analyse various parameters of two port network. CO4: Know Laplace transforms and their significance in signalanalysis. CO5: Synthesis various networks based on analysis of network. CO6: Apply various synthesis & analysis techniques to design various circuits.				
7	Course Description	This course deals with the fundamentals of electric circuits, their components and the mathematical tools used to represent and analyze electrical circuits.				
8	Outline syllabu	is .				
	Unit 1	Signals and Systems				
	A	Introduction to signals, Types of signals				
	В	Signal analysis, Singularity functions and associatedwaveforms.				
	С	Introduction to system. System classifications. Continuoustime and discrete time LTI systems. Their properties, Convolution Sum and convolution Integral				
	Unit 2	Network Theorem(DC Independent and dependentsources)				
	A	Review of KCL and KVL, Node and Mesh Analysis, Superposition Theorem, Source Transformation				
	В	Thevenin and Norton"s Theorem				
	С	Max Power Transfer theorem, Millman"s Theorem, Tellegen"s theorem.				
	Unit 3 Two Port Networks					
	A	Z, Y, h & Transmission Parameter.				

B Conversion of parameters from one to other.			eters from one to other.		
	С	Combination of two port network (Series, parallel, series-parallel, cascade).			
	Unit 4	Circuit Analysis in S- domain			
	A	Introducti	on to Lapla	ice transform, Properties of LaplaceTransform	
	В	Poles, Zeros & Transfer Functions.			
	С	Convoluti	ion, Natural	Response and the s-plane.	
	Unit 5	Network	Synthesis		
	A	Techniques for Synthesizing the Voltage Ratio H(s).			
	В	Network realization & synthesis			
	C	Foster I &II ,Cauer I & II.

		problems.
6	Course	After successful completion of this course the student will be able to:
	Outcomes	CO1:Identify various signals and apply them to the systems
		CO2:Analyze various theorems applied in network theory
		CO3: Demonstrate various parameters of two port network
		CO4: Construct networks for analysis
		CO5: Design the network on the basis of analysis
		CO6: Design and analysis of various networks
7	Course	Students will learn and understand Network Systems through practical approach
	Description	
8	Outline syllabus	
	Unit 1	Signals & LTI Systems
		To recognize various signals and show on CRO
		To apply the signal to the system and verify the output
	Unit 2	Network Theorem (DC Independent and DependentSources)
		To verify KCL and KVL of the given network
		To verify superposition theorem of the given network
		To verify Thevinin's and Norton's theorem of the given network
		To verify Maximum Power Transfer theorem of the given network
	Unit 3	Two Port network
		To find impedance parameters
		To find admittance parameters
		To find hybrid parameters
		To find transmission parameters
	Unit 4	Circuit Analysis in S-domain
		To calculate driving function and transfer function of the ladder network
		To calculate driving function and transfer function of the T- network
	Unit 5	Network Synthesis

Se	mester:IV				
1	Course Code	ECE-243			
2	Course Title	Analog Circuits-2			
3	Credits	4			
4	Contact Hours	3-1-0			
	(L-T-P)				
	Course Status	Compulsory			
5	Course Objective	 To explain the basic concept of feedback and types of feedback. To explain the operational amplifier and their applications. To acquire knowledge about filters and oscillators. To acquire knowledge about multivibrators. To explain analog to digital converter(ADC),digital to analog converter(DAC),integrated circuit timer and phased looked loop(PLL) 			
6	Course Outcomes	After successful completion of this course the student will be able to: CO1: Define and explain basics of feedback amplifier CO2: Demonstrate the concepts of op-amp and analyze its characteristics CO3: Analyse and design linear applications of op-amp CO4: Analyse and compare nonlinear applications of op-amp and study of D/A,A/D PLL,555 timer CO5: Analyse the advance circuits like converters and multivibrators. CO6: analyse the functioning of OP-AMP and design OP-AMP based circuits.			
7	Course Description	This is a course on the design and applications of operational amplifiers and analog integrated circuits. This course introduces basic op-amp principles and show how the op-amp can be used to solve a variety of application problems. Much attention is given to basic op-amp configurations, linear and non-linear applications of op-amp and active filter synthesis, including switched capacitor configurations. It also deals with oscillators, waveform generators and data converters.			
- 6	Unit 1	Feedback Amplifier			
	A	The general feedback structure, properties of negativefeedback			
	В	The four basic feedback topologies: the series-shunt feedbackamplifier			
	С	The series-series feedback amplifier, the shunt-shunt and shunt series feedback amplifier.			
	Unit 2	Introduction of Operational Amplifiers			
	A	Introduction, ideal Op-Amp, the Op-Amp terminals, Functionand Characteristics of the ideal Op-Amp,the close loop gain.			
	В	Differential and Common-Mode Signals, Inverting and non-inverting configuration, the close loop gain, Input and output resistance and slew rate.			

C Weighted Summer, Voltage follower, Difference Amplifier,Ir Differentiator.					
Unit 3	Opamp Applications				
A	An Overview of Op-Amp based circuits V-I and I-V converters.				
В	Generalized impedance converter, simulation of inductors.				
С	First and second order LP,HP,BP,BS and All pass activefilters.				
Unit 4	Nonlinear Applications of Operational Amplifiers				
A	Log-Antilog Amplifiers, Instrumentation Amplifier, IsolationAmplifier.				
В	Precision Rectifiers, Peak Detectors, Sample and Hold				
	Circuits, Schmitt trigger, stable Multi-vibrator, Monostable Multi-vibrator, Generation of Triangular Waveforms.				
С	Analog Multipliers and their applications, Op-Amp as acomparator, Zero				
	Crossing detector.				
Unit 5	D/A and A/D Converters				
A	Basic circuits using Binary weighted Resistors, R-2R ladderD/A converters.				
В	Dual Slop,Parallel,SAR A/D converters.				
C	The 555 circuit, implementing a MonostableMultivibrator using 555 IC, AstableMultivibrator Using 555 IC, Ex-OR Gates and multipliers as phase detectors, Block Diagram of ICPLL (NE565).

5	Course	To recall the concept of signals			
	Objective	 To introduce the concepts of analog communication systems. To equip students with various issues related to analogue communication such as modulation, demodulation, transmitters and receivers and noise performance. To discriminate various pulse modulation techniques To understand multiplexing 			
6	Course Outcomes	After successful completion of this course the student will be able to: CO1: Comprehend the fundamentals in explain the functionality of modulation and demodulation environment CO2: Analyze the concepts of AM and AM Demodulation process in Communication. CO3: Know the origin of FM and FM-Demodulation process in communication CO4: Analyse the behaviour of a communication system in presence of noise CO5: Investigate pulsed modulation system and analyse their system performance CO6: analyze the effect of noise on basic AM and FM receivers			
7	Course Description	The course will introduce the participants to the signal representation in time and frequency domain, basic analog communication techniques like modulation theory, system design for analog modulator and demodulator, random process and noise analysis.			
8	Outline syllabu	S			
	Unit 1	REVIEW OF SIGNALS			
	A	Types of signals, Fourier Transform			
	В	Frequency domain representation of signals			
	С	Elements of communication system			
	Unit 2	ANALOG MODULATION			
	A	Need of modulation, Types of modulation			
	В	Principles of Amplitude Modulation Systems- DSB, SSB and VSB modulations			
	С	Angle Modulation, Representation of FM and PM signals, Spectral characteristics of angle modulated signals.			

	Unit 3	PROBABILITY THEORY AND NOISE				
	A	Review of probability and random process				
	В	Types of Noises: Internal and External Noise, Noise Figure, Noise Calculation				
	С	Gaussian and white noise characteristics				
	Unit 4	NOISE IN VARIOUS ANALOG MODULATION				
	A	Noise in amplitude modulation systems				
	В	Noise in Frequency modulation systems				
	С	Pre-emphasis and De-emphasis, Threshold effect in anglemodulation				
	Unit 5	PULSE MODULATION				
	A	Pulse modulation, Sampling process				
	В	Pulse Amplitude Modulation, Pulse Width Modulation, PulsePosition Modulation, Introduction to Pulse code modulation				
	C	Multiplexing- TDM and FDM

5	Course Objective	Control Systems is the study of the analysis and regulation of the output behaviors of dynamical systems subject to input signals. The concepts and tools discussed in this course can be used in a wide spectrum of engineering disciplines. The emphasis of this course will be on analysis and feedback controller design methods for linear time-invariant systems.
6	Course Outcomes	After successful completion of this course the student will be able to: CO1: Apply transfer function models, signal flow graphs and block diagram algebra to obtain the transfer function of a given system CO2: Obtain system response in time domain CO3: Design a closed-loop control system to satisfy dynamic performance specifications using frequency response CO4: Analyse closed-loop control systems for stability and steady-state performance CO5: Design simple feedback controllers and compensators to meet desired performance specifications CO6: Apply the concept of basics of linear time-invariant control system.
7	Course Description	This course shall introduce the fundamentals of modeling and control of linear time invariant systems. The course will be useful for students from major streams of engineering to build foundations of time/frequency analysis of systems as well as the feedback control of such systems.
8	Outline syllab	us
	Unit 1	Introduction to Control Problem
	A	Feedback Control: open-loop and closed-loop systems, benefits of feedback,
		block diagram algebra
	В	Mathematical models of physical systems, signal flowgraph
	С	Transfer function models of linear time-invariant systems
	Unit 2	Time Response Analysis
	A	Standard test signals, time response of first order systems
·		

	for standar	d test input	rs ·				
В	Time respo	onse of seco	ond order systems for standard testinputs				
С	Design spe	ecifications	for second-order systems based onthe time-response				
Unit 3	Frequency	Frequency Response Analysis					
A	Introduction	n and frequ	uency domain specifications				
В	Correlation	n between f	requency domain and time domain.				
С	Polar plot	and Bode p	plot				
Unit 4	Stability o	f Control S	Systems				
A	Concept of	fstability					
В	Characteris Hurwitz cr		on, location of roots in s plane forstability, Routh				
С	Root-locus	technique.	Construction of root-loci				
Unit 5	Modern C	Control Sys	tem				
A	Lag, lead, lag-lead compensator and their performancecriteria						
В	Concepts of state variables and state space model.						
С	Solution of	f state equa	tions, concept of controllability and observability.

6	Course Outcomes	After successful completion of this course the student will be able to: CO1: Analyse the concept of digital communication. CO2: Know Intersymbol Interference. CO3:Apply the knowledge of signals and system to understand various modulation techniques. CO4:Apply and interpret entropy and channel capacity. CO5: Analyse various error detecting and correcting codes. CO6: Able to explain the techniques used for waveform coding viz. (ASK, FSK, PSK)
7	Course Description	This course give the basic structures and fundamental principles of modern digital communication systems, source coding, concepts of information, entropy, channel capacity, channel coding.
8	Outline syllabus	
	Unit 1	DIGITAL TRANSMISSION SYSTEM
	A	General concept of digital communication systems
	В	Sampling, quantization; Companding
	С	PCM, Delta modulation; Adaptive delta modulation; Differential PCM.
	Unit 2	INTERSYMBOL INTERFERENCE
	A	Intersymbol Interference, Non-ideal channeltransmission, Eye diagram, pulse shaping
	В	Bit synchronization, word synchronization
	С	Optimal Receiver Design, Matched filter, bit errorrate, coherent receiver
	Unit 3	DIGITAL MODULATION TECHNIQUES
	A	Coherent receivers: ASK, FSK, PSK modulation
	В	Incoherent receivers: ASK, FSK, PSK modulation, Differential PSK modulation
	С	Detection of M-ary signals
	Unit 4	INFORMATION THEORY
	A	Information, Entropy for discrete signals, Selfinformation, mutual information, Entropy rate

			Beyond Boundaries
В		-	city: Entropy for continuous random
	variat	oles; Ch	annel capacity; Shannon's second theorem; Capacity of a
	band-	limited	Gaussian channel
С	Sourc	e codin	g: Huffman coding; Shannon-Fanocoding; Shannon's
	first t	heorem	
Unit 5	CHA	NNEL	CODING
A	Error	correct	ing codes, Linear block codes
В	Cycli	codes	
С	Conv	olutiona	al codes, Viterbi's decoding algorithm
Mode of	Theor	y/Practi	ical/Viva

5	Course	1. The system is designed to provide students with an introductory but				
	Objective	comprehensive knowledge on computer architecture.				
		2. Familiarize students about hardware design including logic design, basic				
		structure and behaviour of the various functional modules of the computer.				
		3. The emphasis is on studying and analysing fundamental issues in architecture				
		design and their impact on performance.				
6	Course	After successful completion of this course the student will be able to:				
	Outcomes	CO1:Learn how computers work				
		CO2:Understand basic principles of computer"s working				
		CO3:Analyse the performance of control unit				
		CO4:Understand the concept of memory organization				
		CO5:Compare different issues affecting modern processors (parallel processing,				
		pipelines etc.)				
		CO6: Able to Explain the functional units of a processor/CPU.				
7	Course	The course is designed to familiarize students shout fundamental concents				
/		The course is designed to familiarize students about fundamental concepts				
	Description	underlying modern computer organization and architecture. The students get to				
		know that how hardware design interact to provide the processing needs of the				
		user. It will cover machine level representation of data, instruction sets, computer arithmetic, CPU structure and functions, memory system organization and				
		architecture, system input/output, multiprocessors, and digital logic.				
8	Outline syllab					
		Fundamental of computer architecture				
	A	Basic Structure of Computers, Functional units, software, performance issues				
	11	2 4520 Structure of Computers, I university units, Software, performance issues				
	В	Machine instructions and programs, Types of instructions, Instruction sets:				
		Instruction formats				
	С	Assembly language, Stacks, Subroutines				
	Unit 2	Processor organization				
	A	Processor organization, Information representation, numberformats				
	В	Multiplication & division, ALU design				

С	Floating Point arithmetic, IEEE 754 floating pointFormats					
Unit 3	Control Unit					
A	Control Design, Instruction sequencing, Interpretation, Hard wiredcontrol - Design methods, and CPU control unit					
В	Microprogrammed Control - Basic concepts, minimizing microinstruction size, multiplier control unit					
C	Microprogrammed computers - CPU control unit					
Unit 4	Memory organization					
A	Memory organization, device characteristics, RAM, ROM, Memory management					
В	Concept of Cache & associative memories, Virtual memory					
С	System organization, Input - Output systems, Interrupt, DMA,Standard I/O interfaces					
Unit 5	Parallel processing					
A	Concept of parallel processing					
В	Pipelining, Forms of parallel processing					
С	Interconnect network					
Mode of examination	Theory/Jury/Practical/Viva

	Course Status	Compulsory
5	Course Objective	1. An understanding of the methodology for modeling mechanical, electrical, and other types of dynamic systems using both time domain
		and frequency domain analysis.
		2. An understanding of the fundamental analytical methods and tools used in control system design.
		3. Ability to design feedback controllers and compensators to meet
		Desired performance specifications.
6	Course	After successful completion of this course the student will be able to:
	Outcomes	CO1:Understand the modeling of linear-time-invariant systems using transfer
		function models, signal flow graphs and block diagram algebra
		CO2: Understand the concept of stability and its assessment for linear-time
		invariant systems.
		CO3: To obtain system response in both time domain and frequency domain
		CO4: Analyze dynamic systems for their stability and performance
		CO5: To obtain and analyze the state space representation of a system
		CO6: Apply the concept of time domain and frequency domain analysis for
7	<u> </u>	Industrial application.
7	Course	This course shall introduce the fundamentals of modeling and control of linear
	Description	time invariant systems. The course will be useful for students from major
		streams of engineering to build foundations of time/frequency analysis of systems as well as the feedback control of such systems.
8	Outline syllabu	· · · · · · · · · · · · · · · · · · ·
	Unit 1	Practical based Feedback Systems
		To determine the speed-torque characteristics of an ACServomotor
		To study synchro transmitter and receiver pair and obtainoutput versus input
		characteristics To control the speed of an AC motor using TRIAC
	Unit 2	Practical related to time response analysis
	Omt 2	Time domain analysis and error analysis of first order controlsystem using MATLAB
		Time domain analysis and error analysis of first order controlsystem using WATLAD
		Time domain analysis analysis of second order control system

	using MATLAB
	Error analysis of second order control system using MATLAB
Unit 3	Practical related to frequency response analysis
	Frequency domain analysis and error analysis of first ordercontrol system using MATLAB
	Frequency domain analysis analysis of second order controlsystem using MATLAB
	Error analysis of second order control system using MATLAB
Unit 4	Practical related to Stability
	Stability analysis using Bode Plot of Linear Time Invariantsystem using MATLAB
	Stability analysis using Root Locus Technique of Linear TimeInvariant system using MATLAB
Unit 5	Practical related to State Space Analysis
	To obtain state space representation of a given system using MATLAB.
	To transform a given state space model to transfer function and vice versa using MATLAB
Mode of examination	Practical

5	Course	To educate basic knowledge of networking technologies and network
	Objective	management concepts.
		2. To interpret the layering concepts in computer networks.
		3. To analyse the functions of each layer and gain knowledge in different
		applications that use computer networks.
		4. To emphasize the hand-on experience of network topology in a
		laboratory environment.
		5. To be familiar with contemporary issues in networking technologies.
		5. To be familiar with contemporary issues in networking technologies.
6	Course	After successful completion of this course the student will be able to:
	Outcomes	CO1: Understand the concepts of networking thoroughly.
		CO2: Understand the data link layer functionality
		CO3: Analyse the performance of the network.
		CO4: Investigate Quality control mechanisms.
		CO5: Analyse the various switching technologies.
		CO6: Explain and identify performance issues in computer networking.
7	Course Description	The main emphasis of this course is on the organization and management of local area networks (LANs). The course objectives include learning about
		computer network organization and implementation, obtaining a theoretical
		understanding of data communication and computer networks, and gaining
		practical experience in installation, monitoring, and troubleshooting of
		current LAN systems. The course introduces computer communication
		network design and its operations. The course includes the following topics:
		Open Systems Interconnection (OSI) communication model; error detection
		and recovery; local area networks; bridges, routers and gateways; network
		naming and addressing; and local and remote procedures. On completion of
		the course, the student should be able in part to design, implement and
		maintain a typical computer network (LAN).
8	Outline syllab	
	Unit 1	Introduction to computer networks and the Internet
		LCI I I I' ' CNT ' I TANINGANISTANI
	A B	Goals and application of Networks, LAN, MAN, WAN Protocol Hierarchies, Layered architecture.

	С	The OSI reference model, TCP/IP reference model, Internet.					
	Unit 2	Data Link Layer					
	A	Data link layer design issues, Flow control, and Error control.					
•	В	Data link layer protocols, stop-and-wait protocol, Slidingwindow protocol, Go-back-N protocol, HDLC, PPP.					
	C Media access sub layer, MAC protocols-ALOHA, slottedALOHA, Ca sense multiple access protocol.

Course Code						
Course Code Course Title Management for Engineers Credits 3 Contact Hours (L-T-P) Course Status Compulsory The objective of this course is to expose the students to understand the basics of Management Foundations. The students will be given a detailed grounding for the theories and cases related to the general management. The aim of the course is to orient the students in theories and practices of Management so as to apply the acquired knowledge in actual business practices. This is a gateway to the real world of management and decision-making. Course Outcomes Col: Define basic principles and concepts related to management in an organization including the functions, different theories of management and roles they play in an organizations, different theories of management and roles they play in an organizations with various techniques are used. CO3: Use of organizing by studying different types of organization and also using decentralization and span of control in organizations. CO4: Analyse jobs, recruitment process, manpower planning, job rotation, trainingsand rewards in various organizations. CO5: Measure motivation and management control concepts to obtain effective controlling in management. Course Description This course gives an overview of engineering management and help to understand the various functions of management used in an organization. The focus of the course is the development of individual skills and team work. Outline syllabus Unit 1 Introduction of Management & Organisation A Management-Definition of Management, Levelsof Management,		Semester: VII

	Current Academic Year:						
	Branch: ECE						
Semester: VI							
1	Course Code ECE931						
3	Course Title Credits	Antennas and Propagation					
		3					
4	Contact	3-0-0					
	Hours (L-T-P)						
	Course	Program Elective					
	Status						
5	Course	1. Describe the basic principles of various types of antennas.					
	Objective	2. Analyse different types of antennas designed for various frequency ranges.					
		3. Become proficient with analytical skills for understanding practical use of					
		antennas.					
		4. Design some practical antennas such as dipole, Yagi - uda, and horn					
		antennas.					
		5. Determine the radiation patterns (in principal planes) of antennas through					
		measurement setups.					
6	Course	After successful completion of this course the student will be able to:					
	Outcomes	CO1: Uderstandthe properties of antennas.					
		CO2: Analyse the properties of different types of antennas and their design.					
		CO3: Operate antenna design and come up with the design of the antenna of required specifications.					
		CO4: Able to explain structure and working of antenna types					
		CO5: Design antenna patterns for different cases.					
		CO6: Understand the various antenna parameters.					
7	Course	This course is design to introduce the fundamental principles of antenna					
,	Description	working and various types of antennas. The students can capable to analysis					
	Description	and measure the radiation from antennas.					
8	Outline syllab	us					
	Unit 1	Fundamental Concepts of Radiations					
	A	Fundamental Concepts- Physical concept of radiation, Radiationpattern, near-and					
		far-field regions,					
	В	Reciprocity, directivity and gain, effective aperture, polarization,					
		input impedance, efficiency					
	С	Friis transmission equation, radiation integrals and auxiliary potential functions.					
	Unit 2	Radiation Theory					
	A	Radiation from Wires and Loops- Infinitesimal dipole, finite-length dipole.					
	В	Linear elements near conductors, dipoles for mobilecommunication,					
		small circular loop.					
	C Aperture and Reflector Antennas- Huygens' principle,						

Unit 3	Radiation	from Anto	enna			
A	Radiation	from rectang	gular and circular apertures, designconsiderations,			
В	Babinet's principle, Radiation from sectoral and pyramidalhorns.					
С	Design cor	Design concepts, prime-focus parabolic reflector and case grainantennas.				
Unit 4	Various A	Various Antenna				
A	Broadband	Broadband Antennas- Log-periodic and Yagi-Uda antennas,				
В	Frequency	Frequency independent antennas, broadcast antennas.				
С	Antenna A	rray: Broad	d side array, endfire array			
Unit 5	· · · · · · · · · · · · · · · · · · ·					
A		Micro strip Antennas- Basic characteristics of micro stripantennas, feeding methods,				
В	Methods o	f analysis, d	lesign of rectangular and circular patchantennas.			
С	Basic Cone	Basic Concepts of Smart Antennas- Concept and benefits of smart antennas				
Mode of examination	Theory/Ju	Theory/Jury/Practical/Viva

5	Course	Have a concept on the scope and recent development of the science and					
3	Objective	technology of MEMS.					
	Objective	2. Gain the physical knowledge underlying the operation principles and design of					
		MEMS.					
		3.Learn some typical or potentially applicable micro and nano systems at the					
		frontier of the development of the field					
6	Course	After successful completion of this course the student will be able to:					
	Outcomes	CO1: Appreciate the underlying working principles of MEMS and NEMS devices.					
		CO2: Design and model MEMS devices.					
		CO3 : Gain a knowledge of basic approaches for various sensor design					
		CO4 : Evaluate the basic approaches for various actuator design					
		CO5: Compare the different MEMS characterisation techniques.					
		CO6: Analyse new materials, science and technology for micro/nanosystem					
		applications.					
7	Course	The objective of this course is to make students to gain basic knowledge on					
	Description	overview of MEMS (Micro electro Mechanical System) and various fabrication					
		techniques. This enables them to design, analysis, fabrication and testing the					
		MEMS based components. And to introduce the students various opportunities in					
		the emerging field of MEMS.					
8	Outline syllabu						
	Unit 1	Introduction and Historical Background					
	A	Introduction to Micro electro mechanical Systems (MEMS)					
	В	Types of MEMS					
C Micro/Nano Sensors, Actuators and Systems Unit 2 Review of Basic MEMS fabrication modules		Micro/Nano Sensors, Actuators and Systems					
		Review of Basic MEMS fabrication modules					
	A	Conventional MEMS fabrication using VLSI technology, lithography.					
	В	Oxidation, Deposition Techniques, Lithography (LIGA), and Etching					
	C	Plasma etching, reactive ion etching (RIE), oxidation, chemical vapour deposition					
		(CVD)					
	Unit 3	MEMS: Design and Analysis					
	A	Basic concepts of design of MEMS devices and processes					
	В	Design for fabrication, Other design considerations,					

	С	Analysis of	MEMS dev	vices, FEM and Multi physics analysis.	
	Unit 4			MEMS/NEMS	
	A Stresses, Strain, Hookes's law, Poisson effect, Linear ThermalExpansion				
	В	Bending; Energy methods, Overview of Finite Element Method			
	С	Modeling of	of Coupled E	Electromechanical Systems.	
	Unit 5	Thermal Expansion, Bending AND MEMS Characterization			
	A	MEMS Characterization: Technologies for MEMS characterization, Scanning Probe Microscopy (SPM)			
	B Atomic Force Microscopy (AFM), Scanning tunnelingmicroscopy (STM			opy (AFM), Scanning tunnelingmicroscopy	
C Thermal Expansion, Bending; Energy methods, Overview of Finite Element Method, Modeling of Coupled Electromechanical Systems

5	Course	1. To learn the basic elements of optical fiber transmission link, fiber					
	Objective	modes configurations and structures					
	Objective	2. To learn the various optical source materials, LED structures,					
		quantum efficiency, Laser diodes					
		3. To learn the fiber optical receivers such as PIN APD diodes, noise					
		performance in photo detector, receiver operation and configuration					
		4. To learn the fiber optical network components and operational					
	C	principles WDM &self-phase modulation.					
6	Course	After successful completion of this course the student will be able to:					
	Outcomes	CO1: Understand the principles fiber-optic communication, the					
		components and the bandwidth advantages.					
		CO2: Illustrate the properties of the optical fibers and optical components					
		CO3:Evaluate the concepts of lasers, LEDs, and detectors					
		CO4: Analyze system performance of optical communication systems					
		CO5: Design optical networks and understand non-linear effects in optical					
		fibers					
		CO6: Able to explain elements of an optical fiber transmission link, and					
		applications of optical fiber communication					
7	Course	The optical fiber characteristics are studied and different types of optical					
	Description	fibers are introduced. Signal distortion on optical fibers is investigated					
		subsequently. Theoretical aspects of optical sources like LEDs and Lasers					
		are introduced. Semiconductor based optical detectors are studied and					
		analysis of optical links is presented. Advanced topics DWDM systems,					
		solution based communication are introduced.					
8	Outline syllal	ous					
	Unit 1	Overview of optical fiber communication					
	A	Introduction to vector nature of light, propagation of light,					
		propagation of light in a cylindrical dielectric rod, Raymodel, wave model					
	В	Different types of optical fibers, Modal analysis of a stepindex fiber.					
	I	J1 1,					

	С	_	Signal degradation on optical fiber due to dispersion and attenuation. Fabrication of fibers and measurement techniques like OTDR					
	Unit 2	Optical	sources					
	A	LEDs ar	nd Laser, S	Structures, Efficiency and Characteristics				
	В	Semicor	nductor inj	ection Laser, External QuantumEfficiency.				
	С	Laser diode rate equations, resonant frequencies.						
Unit 3 Optical Detectors/Link Design				s/Link Design				
	A	Photo-de	etectors - p	pin-diodes, APDs,				
	В	detector	responsiv	ely, noise, optical receivers.				
	С	Optical 1	link desigi	n - BER calculation, quantum limit,power penalties.				
	Unit 4	Optical	switches	and Amplifiers

5	Course	1. Introduce information theory, Probabilistic (stochastic) systems, Reasoning				
	Objective	under uncertainty, Quantifying information, State and discuss coding theorems				
		2. Give an overview of coding theory and practice, Data compression, Error-				
		control coding				
6	Course	After successful completion of this course the student will be able to:				
	Outcomes	CO1: Understand the concept of information and entropy CO2: Illustrate Shannon"s theorem for coding				
		CO3: Analyse channel capacity and noise.				
		CO4: Apply coding techniques				
		CO5: Analyse the transmission error of a communication process				
		CO6: Construct efficient codes for data on communication channels.				
7	Course	The course aims at introducing information theory and the practical aspects of				
'	Description	data compression and error-control coding. The theoretical concepts are				
	Bescription	illustrated using practical examples related to the effective storage and				
		transmission of digital and analog.				
8	Outline syllab	<u> </u>				
	Unit 1					
A Basics of information the		Basics of information theory				
	В	entropy for discrete ensembles				
	С	Shannon's noiseless Coding theorem				
	Unit 2					
	A	Encoding of discrete sources				
	В	Markov sources; Shannon's noisy coding theorem				
	С	converse for discrete channels				
	Unit 3					
	A	Calculation of channel capacity				
	В	bounds for discrete channels				
	C	Application to continuous channels				
	Unit 4

5	Course	1. Demonstrate the basic concents and methodologies for the analysis and				
3	Objective	1. Demonstrate the basic concepts and methodologies for the analysis and modelling of speech signal.				
	Objective	2.Evaluate the speech signal as generated by a speech production model				
		4. Analyse speech signal using LPC				
		5. Extract the information of the speech or audio signals in terms of cepstral				
		features				
		6. Provide a foundation for developing applications in this field.				
6	Course	At the end of the course, students will demonstrate the ability to:				
	Outcomes	CO1:Understand the Mathematical model of the speech signal				
		CO2: Analyse the quality and properties of speech signal.				
		CO3: Illustrate and enhance the speech and audio signals.				
		CO4: Compare different speech signal using LPC				
		CO5: Evaluate the LPC used for audio signal processing.				
		CO6: Apply MATLAB tools to analyse speech signals in the time and frequency				
		domains				
7	Course	The course is to develop an understanding of how speech signals are processed in				
	Description	three general areas: Analysis, Synthesis, and Recognition. Speech must also be				
		understood in the context of its creation (anatomy, classification of sounds, etc.)				
		as well as in its perception (psychology & neuroscience). Analytical tools are				
		needed for analysis and synthesis, which draw on the areas of digital signal				
		processing and time-frequency analysis. Pattern recognition concepts are needed				
		for speech recognition. Finally, since computers cannot process and understand				
		speech as well as humans do, we will look to biology for inspiration since the				
8	Outling avillab	brain does an amazing job in all these tasks.				
0	Outline syllab Unit 1	Fundamentals of speech production				
		Introduction- Speech production and modelling - Human AuditorySystem; General				
	A	structure of speech coders;				
	В	Classification of speech coding techniques – parametric, waveformand hybrid;				
	С	Requirements of speech codecs –quality, coding delays, robustness.				
	Unit 2	Time and frequency domain methods for audio processing				
	A	Speech Signal Processing- Pitch-period estimation,				
	В	All-pole and all-zero filters, convolution; Power spectral density				

С	Periodogra	m, autoregr	essive model, autocorrelation estimation.			
Unit 3						
A	Linear Pred	diction of Sp	peech- Basic concepts of linear prediction;			
В	Linear Pre	diction Ana	lysis of non-stationary signals –predictiongain, examples;			
	Levinson-l	Durbin algor	rithm;			
C			erm linear prediction models; Movingaverage prediction.

5	Course	1. Examine and derive the FIR Wiener filter						
	Objective	2. Explain and use the LMS algorithm						
		3. Apply the RLS algorithm						
		4. Recognise the prediction filter formulation and applications						
		5. Solve the Wiener filter weights for the prediction filter using the Levinson-						
		Durbinalgorithm						
		6. Apply the Lattice filter architecture from the Levinson-Durbin algorithm						
		7. LMS and RLS algorithms and apply to selected applications.						
6	Course	At the end of the course, students will demonstrate the ability to:						
	Outcomes	CO1: Demonstrate the non-linear control and the need and significance of						
		changing the control parameters w.r.t. real-time situation.						
		CO2: Explain mathematically the "adaptability requirement".						
		CO3: Illustrate the mathematical treatment for design of the signal processing						
		systems.						
		CO4: Define formulation of RLS estimation.						
		CO5: Comprehend the estimation theory for linear systems and modeling						
		algorithms						
		CO6: Evaluate various practical aspects of signal processing						
7	Course	Introductory and Preliminary material - Introduction to the concepts, key						
,	Description	issues and motivating examples for adaptive filters; Random variables and						
	Bescription	random processes. Optimum Linear Systems - Error surfaces and minimum						
		mean square error; Optimum discrete time Wiener filter; Principle of						
		orthogonality and canonical forms; Constrained optimisation; Method of						
		steepest descent - convergence issues; Stochastic gradient descent LMS -						
		convergence in the mean and mis-adjustment Case study. Least squares and						
		recursive least squares. Linear Prediction - Forward and backward linear						
		prediction; Levinson Durbin; Lattice filters.						
8	Outline syllabu							
	Unit 1	Introduction to Adaptive Signal Processing						
	A	General concept of adaptive filtering and estimation, applications and motivation						
	В	Review of probability, random variables and stationary random						
		processes						
	С	Correlation structures, properties of correlation matrices.						

Unit 2	The filter	and LMS a	lgorithm		
A			Filter, Method of steepest descent, extension to		
	complex va				
В			al, complex), convergence analysis,		
C			n matrix, excess mean square error and		
	mis-adjustr				
Unit 3	LMS Algo				
A	Variants of LMS algori		gorithm: the sign LMS family,normalized		
В	Block LMS and FFT based realization, Frequency domainadaptive filters, Sub-band adaptive filtering.				
С	subspace, b	asis, dimens	introduction to finite dimensional vectorspace theory, sion, linear operators, rank act space, orthogonality.		
Unit 4	Explanation	on of Vecto	or Space		
A			nalization, concepts of orthogonal projection, ion of vector spaces.		
В	Vector space		variables, correlation as inner product, forward and		
С			, recursive updating of forward and backward onship with ARmodelling.		
Unit 5	Introduction to recursive least squares (RLS) method				
A	Introduction to recursive least squares (RLS), vector spaceformulation of RLS estimation, pseudo-inverse of a matrix.				
В	time updating of inner products, development of RLS latticefilters, RLS transversal adaptive filters				
С		•	e projection and subspace based adaptive filters, partial decomposition and systolicarray.

 Murat Tekalp , Digital Video Processing" Prentice Hall, 2nd edition 2015- ISBN: 9780133991000 				

Sch	nool: SET								
Bat	tch :								
Pro	Program: B.Tech								
	Current Academic Year:								
Branch: ECE									
Semester: VII/VIII									
1	Course Code ECE949								
2	Course Title	Mixed Signal Design							
3	Credits	3							
4	Contact	3-0-0							
	Hours								
	(L-T-P)								
	Course	Program Elective							
	Status								
5	Course	1. To know mixed signal circuits like DAC, ADC, PLL etc.							
	Objective	2. To gain knowledge on filter design in mixed signal mode.							
	J	3. To acquire knowledge on design different architectures in mixed							
		signal mode.							
6	Course	At the end of the course, students will demonstrate the ability to:							
	Outcomes	CO1: Understand the practical situations where mixed signal analysis is							
		required.							
		CO2: Analyze and handle the inter-conversions between signals.							
		CO3: Design systems involving mixed signals							
		CO4: Understand the concept of PLLs.							
		CO5: Analyse analogue and digital microelectronic circuits							
		CO6: Design analogue, digital and mixed microelectronic circuits							
7	Course	As many real life applications involve both analog and digital circuits,							
	Description	this course aims to introduce the problems in implementing both in a							
	1	single silicon wafer.							
8	Outline syllab	E							
	Unit 1	Introduction to Signal Processing							
	A	Analog and discrete-time signal processing, introduction to sampling theory							
	В	Analog continuous time							
		filters: passive and active filters							
	С	Basics of analog discrete-time filters and Z-transform							
1	Unit 2	Switched Capacitor Filters							
	A	Switched-capacitor filters- Non idealities in switched-capacitor filters							
	В	Switched-capacitor filterArchitectures							
	С	Switched-capacitor filter applications							
	Unit 3	Data Converters							
	A	Basics of data converters; Successive approximation ADCs							
	В	Dual slope ADCs, Flash ADCs, Pipeline ADCs							
	С	Hybrid ADC structures, High-resolution ADCs, DACs							

Unit 4	Signal Tra	ansmission				
A	Mixed-sig	nal layout, Ir	nterconnects and data transmission			
В	Voltage-m	ode signalin	g and data transmission			
С	Current-m	Current-mode signaling and data transmission				
Unit 5	Phase Locked Loops					
A	Introduction to frequency synthesizers and synchronization					
В	Basics of PLL, Analog PLLs					
С	Digital PL	Digital PLLs; DLLs				
Mode of	Theory

Pr	Programa B. Meclication & emergency handling, Smart CO1, CO4							
	Current Academic Year:							
Br	anch: ECE Engine	eering						
Se	mester: VII							
1	Course Code	ECE940						
2	Course Title	Principles of Internet of Things						
3	Credits	3						
4	Contact Hours (L-T-P)	3-0-0						
	Course Status	Program Elective						
5	Course	1. Able to understand the application areas of IoT						
	Objective	2.Introduction to core technologies-rfid ,sensor & communication						
	,	networks						
		3. Able to realize the revolution of internet in mobile devices, cloud						
		& sensor networks						
		4. Able to understand building blocks of internet of things						
		5-understanding of prototype and business model						
6	Course	After completion of this course student will able to:						
	Outcomes	CO1: Able to define key components of existing IoT solutions						
		CO2: Understand the acceptable, evolving guidelines/models for						
		IoT solutions from a global context						
		CO3: Able to understand the Market perspective of IoT solutions,						
		using existing internet and it's use						
		CO4: Able to demonstrate Key application areas						
		CO4. Note to demonstrate they application areas						
		CO5: Able to understand fundamental business model for basic						
		IoT solutions						
		CO6: Evaluate IoT protocols and software.						
7	Course	The explosive growth of the "Internet of Things" is changing our						
	Description	world and the rapid drop in price for typical IoT components is						
		allowing people to innovate new designs and products. In this basic						
		course you will learn the importance of IoT in society, the current						
		components of typical IoT devices and trends for the future. IoT						
		design considerations, constraints and interfacing between the						
		physical world and your device will also be covered. Introduction to						
		business models for IoT-based applications is also present.						
8	Outline syllabus							
	Unit 1	Internet of things						
	A B	Overview with application examples Design Principles for connected devices						
	ח	Design Finiciples for connected devices						
SU	SETABLECH-ECE	ECH-ECE Illustrative application Scenarios" & concepts(2-Ref)						
	A	Smart Waste management, Smart energy conservation						
	41	Smart waste management, Smart energy conservation						

В

		product management, Home automation.					
С	Smart Urba	Smart Urban planning, Sustainable urbanEnvironment					
Unit 3	Internet principles						
A	Internet co	n- TCP/IP,UDP					
В	IP &Mac A	Addresses, To	CP &UDP port				
С	Applicatio	Application layer protocols-HTTP,HTTPS etc.					
Unit 4	\mathcal{E}						
A	Basics of	C, Wireless networks + WSN ,RTLS + GPS					
В		Basics of Sensors, actuators, Embedded computingbasics-Arduino, Node MCU basics Rasberrypi basics					
С	Rasberrypi						
Unit 5	Usage in Ir	Usage in Industry-business models & Deployment					
A	-	• 1	pment –case study				
В	Business 1	models					
C	Manufactu	Manufacturing & ethics-discussion					
Mode of examination	Theory	Theory
