

Bachelor of Cardiovascular Technology (BCVT)

Program code: SAH0108 (2018 - 2022)

Program and Course Structure

School of Allied Health Sciences

1.1 Vision, Mission and Core Values of the University

Vision of the University

To serve the society by being a global University of higher learning in pursuit of academic excellence, innovation and nurturing entrepreneurship.

Mission of the University

- 1. Transformative educational experience
- 2. Enrichment by educational initiatives that encourage global outlook
- 3. Develop research, support disruptive innovations and accelerate entrepreneurship
- 4. Seeking beyond boundaries

Core Values

- Integrity
- Leadership
- Diversity
- Community

1.2 Vision and Mission of the School

Vision of the School

To steer the School of Allied Health Sciences towards excellence in academics, innovation and entrepreneurship by constant endeavors

Mission of the School

- 1. To create the state of the art facility for quality teaching learning, research & innovation
- 2. To incorporate the contemporary standards in teaching & learning
- 3. To inculcate in the students values of integrity and compassion towards the care of patients and society.

Core Values

- Critical Thinking and Observation
- Analytical Skills
- Creativity
- Skilled professional
- Multidimensional
- Compassion
- Management

1.3 BCVT Programme Educational Objectives (PEO)

A under graduate student having qualified the BSc Cardiovascular Technology course should be able to:

PEO1: B.Sc CVT program enables students to become a trained, qualified cardiovascular technician capable of working independently or in association with a higher setup.

PEO2 : After the completion of program, candidates become well known in techniques such as Electrocardiography, Echocardiography, Treadmill test/Stress test, Doppler ultrasonography and contrast Echo.

PEO3 : Graduate will integrate knowledge and skills of cardiovascular technology to provide healthcare solutions for the benefit of the society.

PEO4: After the completion of program, graduate become well-prepared for work associated with assisting cardiac surgeons, cardio -thoracic surgeons and cardiologists in tertiary care hospitals and others.

PEO5: Graduate will be supportive, informative and providing in necessary information regarding good cardiac health for society and community and continuously improving his/ her knowledge and abilities.

PEO6: Graduates will have a good leadership qualities and entrepreneur skills by working and communicating effectively in interdisciplinary environment, either independently or with a team.

1.3.2 BCVT Map PEOs with Mission Statements:

PEO Statements	School	School	School
r EO Statements	Mission 1	Mission 2	Mission 3
PEO1:	2	2	2
PEO2:	3	2	3

PEO3:	3	3	3
PEO4:	2	2	3
PEO5:	2	3	3
PEO6:	2	2	3

1.3.3 BCVT Program Outcomes (PO's)

PO1 : Define and describe human cardiovascular and its related system in relation to various disease.

PO2 : Distinguish and classify various cardiovascular disorder.

PO3 : Apply knowledge of human cardiovascular and its related system in the diagnosis, cardiovascular disorder, related disorder its management& apply the knowledge and skills to assess and solve societal and legal issues related to cardiovascular care of the patients

PO4 : Utilize modern tools and techniques in the field of cardiovascular technology for patient compliance.

PO5 : Tackle future challenges through lifelong learning and training process related to cardiac health.

PO6 : Evolve ethical practices and moral values in personal and professional endeavors.

PO7 : Regular learning the use of modern tools and techniques for the efficient management of cardiovascular diseases and related disorder.

PSO1 :B.Sc. CVT program enables students to understand disease, acquire skills regarding diagnosis and its management of various cardiac diseases.

PSO2 : The CVT's primary role is to perform maneuvers, diagnostic test according to direction SU/SAHS/BCVT

of a qualified physician and helping him/ her in the diagnosis and treatment of cardiovascular injury and disease.

PSO3 : After completion of the program students will be able to apply specialized occupational theory, skills and concepts to work independently as qualified cardiovascular technologist and becomes an integral member of the cardiac cath. lab and electrophysiology labteams.

1.3.4 Mapping of Program Outcome Vs Program Educational Objectives

	PEO1	PEO2	PEO3	PEO4	PEO5	PEO6
PO1	2	3	3	2	3	2
PO2	3	2	2	2	2	3
PO3	2	3	2	2	2	3
PO4	2	2	3	2	2	3
PO5	2	2	2	2	3	3
PO6	3	2	3	3	3	2
PO7	2	3	2	2	3	3

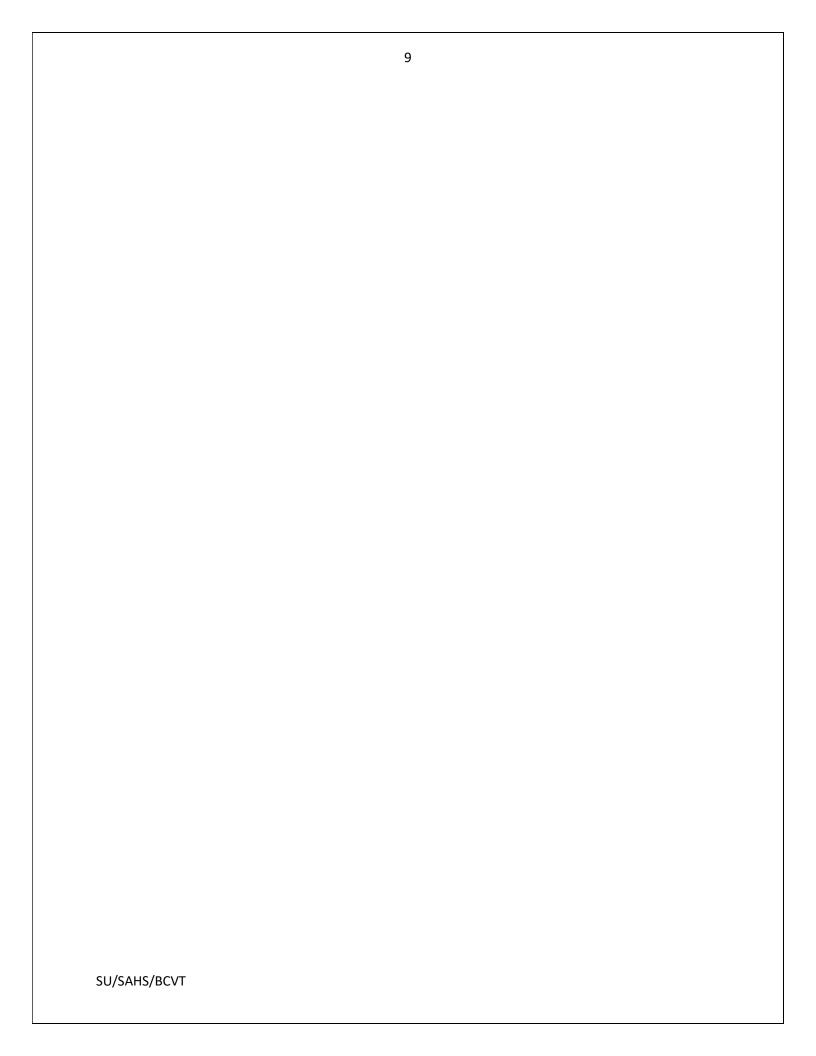

PSO1	2	3	3	2	2
PSO2	3	3	2	3	2
PSO3	2	3	3	2	3

1.3.5 BCVT Program Outcome Vs. Courses Mapping Table:

Program Outcome Courses	Course Name	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PSO1	PSO2	PSO3
1 st Year											
Course 101	Human Anatomy	2	3	2	3	3	2	3	2	2	2
Course 102	Physiology	2	2	3	3	2	3	3	2	2	1
Course 103	Biochemistry	3	2	3	2	3	2	3	3	2	2
Course 104	Pathology	3	2	2	3	3	2	2	1	3	3
Course 104	Microbiology	3	2	2	2	2	2	3	2	2	2
Course 105	Basics of Hospital and data management	2	3	2	2	3	2	2	2	2	3
2 nd Year											
Course 201	Medicine relevant to cardiac care technology	3	2	2	2	3	3	2	2	2	3

1		BCT401	Cardiovascular Technology Internship & Project work	-	-	40	40		

Note:

- 1) Value added course is mandatory for each student of every year (List of VAC are enclosed in Annexure 1) and it is a non-graded course.
- 2) Open elective course is mandatory for each student of every year (List of approved open elective course offered by the University are enclosed as Annexure 2) and it will be audit mode.
- 3) In each academic session, project work/Clinical Posting/Community connect program will be provided to the students.
- 4) B.sc in cardiovascular technology 4 year (Clinical training & internship is non graded)

Clinical training and internship: every student who has passed in all the theory and practical examination of all the years will have to undergo one year compulsory internship in at least 250 bedded hospital.

Course Structure Of BSC. CARDIOVASCULAR TECHNOLOGY (BCVT)

BCT 101: Human Anatomy - I &BCT 101: Human Anatomy - I (Lab)

Sc	hool: SAHS	Batch : 2018-22	
Pr	ogram: BCVT	Current Academic Year: 2018-19	
	anch:	Year: 1	
	ardiovascular		
Te	echnology		
1	Course Code	BCT 101	
2	Course Title	Human Anatomy	
3	Credit Hours	3	
4	Contact Hours (L-T-P)	2-1-2	
	Course Status	Compulsory	
5	Course Objective	• To provide students with a comprehensive overview of the	
		morphology of human body	
		To provide students with a comprehensive overview of the	
		functional anatomy of human body	
		Allow students to evaluate and analyze if there is any deviation	
		or disruption from normal structure and function	
		Applying, understanding the theory while examining the	
		specimen	
		Able to remember and recall the facts	
6	Course Outcomes	CO1: To understand the importance of Human body as whole and locomotion and support	
		CO2: To understand the concepts of Cardiovascular system and	
		gastrointestinal system and its applied	
		CO3: To understand the concepts of Respiratory system and Peritoneum	
		and its applied	
		CO4: To understand the concepts of Urinary system and Reproductive system and its applied	
		CO5: To understand the concepts of Endocrine gland, Nervous system,	
		Sensory organs and its applied	
	C		
7	Course Description	Introduction: Human body as a whole	
	2 compain	Locomotion and support	
		Cardiovascular system	
		Gastrointestinal system	
		Respiratory system	
		Peritoneum	
		Urinary system	

		Reproductive system	
		Endocrine glands	
		Nervous system

	0 11	11.1	
8	Outline sy	llabus	
	Theory Unit 1	Introduction: Human body as a whole	
	Unit 1	 	СО
		Theory: a) Definition of anatomy and its divisions	1
		Terms of location, positions and planes	1
		b) Cell and its organelles	CO
			1
		Epithelium-definition, classification, describe with examples, function	1
		c) Glands- classification, describe serous & mucous glands with examples	CO
		Basic tissues – classification with examples	1
	Unit 2	Locomotion and support	1
	Omt 2	<u>Locomotion and support</u>	
		a) Cartilage – types with example & histology	
		Bone – Classification, names of bone cells, parts of long bone, microscopy of	
		compact bone, names of all bones, vertebral column, intervertebral disc,	
		fontanelles of fetal skull	
		b) Joints – Classification of joints with examples, synovial joint (in detail for	
		radiology)	
		c) Muscular system: Classification of muscular tissue & histology	
		Names of muscles of the body	
	Unit 3	Cardiovascular system	
		======================================	
		a) Heart-size, location, chambers, exterior & interior	CO
		Blood supply of heart	2
		Systemic & pulmonary circulation	
		b) Branches of aorta, common carotid artery, subclavian artery, axillary artery,	CO
		brachial artery, superficial palmar arch, femoral artery, internal iliac artery	2
		Peripheral pulse	
		Inferior venacava, portal vein, portosystemic anastomosis Great saphenous vein	
		Dural venous sinuses	
		c) Lymphatic system-	СО
			2

	d) cisternachyli & thoracic duct Histology of lymphatic tissues Names of regional lymphatics, axillary andinguinal lymph nodesinbrief	2
Unit 4	Gastro-intestinal system	
	a) Parts of GIT, Oral cavity (lip, tongue (with histology), tonsil, dentition, pharynx, salivary glands, Waldeyer's ring)	C0 2
	b) Oesophagus, stomach, small and large intestine	C(2
	c) Liver, gall bladder, pancreas	CO 2
Unit 5	Respiratory system	
	a) Parts of RS, nose, nasal cavity, larynx, trachea, lungs, bronchopulmonary segments	C(3
	b) Histology of trachea, lung and pleura	C 3
	c) Names of paranasal air sinuses	C 3
Unit 6	<u>Peritoneum</u>	
	Description in brief	C(3
	a) Structure	3
	b)Function	
	c) ariations	
Unit 7	<u>Urinary system</u>	
	a) Kidney, ureter, urinary bladder	C(4
	b) Male and female urethra	C(4
	c) Histology of kidney, ureter and urinary bladder	C 4
Unit 8	Reproductive system	
	a) Parts of male reproductive system, testis, vas deferens, epididymis, prostate (gross & histology)	C 4
	b) Parts of female reproductive system, uterus, fallopian tubes, ovary (gross & histology)	C 4

		c) Mammary gland – gross	CO 4
	Unit 9	Endocrine glands	
		a) Names of all endocrine glands in detail on pituitary gland	CO
		b) Thyroid gland, parathyroid gland	5
		c) Suprarenal gland – (gross & histology)	
	Unit 10	Nervous system	
		 a) Neurons, Classification of NS b) Cerebrum, cerebellum, midbrain, pons, medulla oblongata, spinal cord with spinal nerve (gross & histology) Meninges, Ventricles & cerebrospinal fluid Names of basal nuclei Blood supply of brain Cranial nerves c) Sympathetic trunk & names of parasympathetic ganglia 	CO 5
	Unit 11	Sensory organs:	
		a) Skin: Skin-histology Appendages of skin b) Eye: parts of eye & lacrimal apparatus Extra-ocular muscles & nerve supply c) Ear: parts of ear- external, middle and inner ear and contents	CO 5
1	Course	BCT 101	
_	Code		
2	Course Title	HUMAN ANATOMY (LAB)	
3	Credit Hours	1	
4	Contact Hours (L-T-P)	0-0-2	
5	Course Outcomes	CO1: To understand tand differentiate the histology of various epithelium, glands, cartilage, bone and muscles CO2: To understand, identify the artery, vein and predict the chest and abdomen radiograph CO3: To understand the wind pipe in detail and CXR and reflections CO4: To understand the structure, histology of Urinary system & Male and female reproductive system and radiographs related to this. CO5: To understand the structure, histology of glands, skin and other sense organ	
6	Course	Introduction : Human body as a whole-Practical	

Descriptio n	Locomotion and support-PracticalCardiovascular system-Practical	
	Gastrointestinal system-Practical	
	Respiratory system-Practical	
	Peritoneum-Practical	
	Urinary system-Practical	
	Reproductive system-Practical	
	 Endocrine glands-Practical 	
	Nervous system-Practical	
	•	
	Sensory organs-Practical	
Practic al		
Unit 1	Practical:	СО
	a) Histology of types of epithelium	1
	b) Histology of serous, mucous &c) mixed salivary gland	
	cy mixed Junious y Giuna	
Unit 2	a) Histology of the 3 types of cartilage	СО
	b) Demo of all bones showing parts, radiographs of normal bones & joints	1
	Histology of compact bone (TS & LS) Demonstration of all muscles of the body	
	c) Histology of skeletal (TS & LS), smooth & cardiac muscle	
Unit 3	a) Demonstration of heart and vessels in the body	CO
	Histology of large artery, medium sized artery & vein, large vein	2
	 Microscopic appearance of large artery, medium sized artery & vein, large vein pericardium Histology of lymph node, spleen, tonsil & thymus 	
	c) Normal chest radiograph showing heart shadows Normal angiograms	
Unit 4	a) Radiographs of abdomen	CO
	b) Normal	2
	c) Abnormal	

Unit 5	1	of parts of respira	tory system.	CO
	b) Normal radiogra c) Histology of lun			3
	c) Histology of full	g and trachea		
Unit 6	a) Demonstration	n of reflections		CO 3
	b) Normal			
	c) variation			
Unit 7	a)Demonstration of parts b) Histology of kidney, ur c) Radiographs of abdom	eter, urinary blac	der	CO 4
Unit 8		stis, vas deferens	le and female pelves with organs in epididymis, prostate, uterus, fallor alpingograph	
Unit 9	a) Demonstration b) Histology of pitu c) &thyroid, parat		l glands	CO 5
Unit 10	a) Histology of pe b) Demonstration c) Demonstration Histology of cereb	n of all plexuses a n of all part of bra	nd nerves in the body in	CO 5
Unit 11		in and thick skin and histology of ornea & retina	eyeball	CO 5

	Course Status	Compulsory	
5	Course Objective	 Able to apply basis of physiological principles and their application in real life situations Able to perform certain blood tests Able to perform certain physical examination of patients/subjects Providing basis for various scientific research related to physiology and for further study. Knowledge to educate society about life style related problems. 	
6	6 Course Outcomes CO1: To understand the concepts of normal blood composition, hemostasis, blood grouping, blood transfusion, lymph and lymphatic system CO2: To understand the concepts of physiological anatomy of heart, nerve supply, cardiac cyacle,heart sounds, blood pressure and physiological variations and digestive system and its applied CO3: To understand the concept of functions of respiratory system, mechanism of normal respiration and rigourous respiration, lung volume and		

7	Course Description	capacities, applied physiology and respiration and Endocrine gland secretions and its applied CO4: To understand the concept of special sense, nervous system and its applied CO5: To understand the concept of mechanism of urine formation, properties and composition of urine, renal function tests, male and female reproductive system physiology and its applied, skin structure and its aaplied • Blood • Cardiovascular system • Digestive system • Respiratory system • Endocrine systems • Special senses • Nervous system • Excretory systems • Male and female reproductive system	
		• Skin	
8	Outline syllabus		
	Theory Blo	a) Introduction – composition and function of blood	CO1
		Red blood cells – Erythropoiesis , stages of differentiation function , count physiological Variation. Haemoglobin – structure , functions , concentration physiological variation Methods of Estimation of Hb White blood cells – Production , function, life span, count, differential count Platelets – Origin, normal count, morphology functions. Plasma Proteins – Production, concentration , types, albumin, globulin, Fibrinogen, Prothrombin functions. b) Haemostasis & Blood coagulation Haemostasis – Definition, normal haemostasis, clotting factors, mechanism of clotting, disorders of clotting factors. c) Blood Bank Blood groups – ABO system, Rh system Blood grouping & typing, Crossmatching Rh system – Rh factor, Rh in compatibility. Blood transfusion – Indication, universal donor and recipient concept. Selection criteria of a blood donor. transfusion reactions Anticoagulants – Classification, examplesand uses	
	Unit 2	Blood -2	
		a) Anapmias Classification morphological and atilogical offects of a remission	CO1
		 a) Anaemias: Classification – morphological and etilogical. effects of anemia on body Blood indices – Colour index, MCH, MCV, MCHC Erythrocyte sedementation Rate (ESR) and Paced cell volume Normal values, Definition. determination, 	CO1

	 b) Blood Volume -Normal value ,determination of blood volume and regulation of blood volume Body fluid – pH, normal value, regulation and variation c) Lymph – lymphoid tissue formation, circulation, composition and function of lymph 	
Unit 3	Cardiovascular system	
	 a) Heart – Physiological Anatomy, Nerve supply Properties of Cardiac muscle, Cardiac cycle-systole, diastole. Intraventricular pressure curves. Cardiac Output – only definition b) Heart sounds Normal heart sounds Areas of auscultation. Blood Pressure – Definition, normal value, clinical measurement of blood pressure. Physiological variations, regulation of heart rate, cardiac shock, hypotension, hypertension. c) Jugalar, radial pulse, Triple response Heart sounds – Normal heart sounds, cause characteristics and signification. Heart rate Electrocardiogram (ECG) –significance. 	CO
Unit 4	Digestive system	
	Functions of digestive system Salivary glands Stucture and functions. Deglutination –stages and regulation Stomach – structure and fuctions Gastric secretion – Composition function regulation of gastric juice secretion b) Pancrease	
	structure, function Composition Regulation of pancreatic juice Liver Functions of liver Bile secretion, composition, function regulation of bile secretion. Bilirubin metabolism types of bilirubin, Vandernberg reaction. Jaundice- types, significance. Gall bladder – functions c) Intestine	
Unit 5	Small intestine and large intestine Small intestine –Functions- Digestive, absorption ,movements. Large intestine – Functions, Digestion and absorption of Carbohydrates,Proteins, Fats, Lipids &Defecation Respiratory system	
	a) Functions of Respiratory system, Physiological Anatomy of Respiratory system, Respiratory tract, Respiratory Muscles, Respiratory organ-lungs, Alveoli, Respiratory membrane, stages of respiration.	CO

	a)Functions of Nervous system, Neurone structure, classification and properties. Neuroglia, nerve fiber, classification, conduction of impulses continuous and saltatory. Velocity of impulse transmission and factors affecting. Synapse – structure, types, properties. Receptors – Definition, classification, properties. Reflex action – unconditioned properties of reflex action. Babinski's sign. Spinal cord nerve tracts. Ascending tracts, Descending tracts –	
Unit 8	Nervous system	
	 a) Vision – structure of eye. Function of different parts. b) Structure of retina c) Hearing structure and function of can mechanism of hearing Taste – Taste buds functions . Smell physiology, Receptors. 	CO4
Unit 7	<u>Special senses</u>	
Unit 6	a) Definition Classification of Endocrine glands & their Harmones Properties of Harmones . Thyroid gland hormone – Physiological, Anatomy, Hormone scerated, Physiological function, regulation of secretion. Disorders – hypo and hyper secretion of hormone Parathyroid gland – function, action ,regulation of secretion of parathyroid hormone. Calcitonin – function and action b) Adrenal gland, Adrenal cortex physiologic anatomy of adrenal gland, Adrenal cortex, cortical hormones – functions and regulation Adrenal medulla – Hormones , regulation and secretion. Functions of Adrenaline and nor adrenaline c) Pituitary hormones – Anterior and posterior pituitary hormones, secretion ,function Pancreas – Hormones of pancreas Insulin – secretion, regulation ,function and action Diabetes mellitus – Regulation of blood glucose level	CO3
	Mechanism of normal and rigorous respiration. Forces opposing and favouring expansion of the lungs. Intra pulmonary pleural pressure, surface tension, recoil tendency of the wall. H Transportation of Respiratory gases: b) Transportation of Oxygen: Direction, pressure gradient, Forms of transportation, Oxygenation of Hb. Quantity of Oxygen transported. Lung volumes and capacities c) Regulation of respiration what? Why? How? Mechanisms of Regulation, nervous and chemical regulation. Respiratory centre. Hearing Brier, Reflexes. Applied Physiology and Respiration: Hypoxia, Cyanosis, Asphyxia, Dyspnea, Dysbarism, Artificial Respiration, Apnoea.	

	b)Pyramidal tracts – Extrapyramidal tracts. Functions of Medulla, pons, Hypothalamic disorders. Cerebral cortex lobes and functions, Sensory cortex, Motor cortex,Cerebellum functions of Cerebellum.Basal ganglion-funtions. EEG. Cerebro Spinal Fluid(CSF): formation, circulation, properties, composition and functions lumbar puncture. c)Autonomic Nervous System: Sympathetic and parasympathetic distribution and functions and Comparison of functions.	
Unit 9	a) Excretory System Excretory organs Kidneys: Functions of kidneys structural and functional unit nepron, vasarecta, cortical and juxtamedullary nephrons – Comparision, Juxta Glomerular Apparatus –Structure and function. Renal circulation peculiarities. b) Mechanism of Urine formation: Ultrafiltration criteria for filtration GFR, Plasma fraction, EFP, factors effecting EFR. Determination of GFR selective reabsorption – sites of reabsorption ,substance reabsorbed, mechanisms of reabsorption Glucose, urea. H + Cl aminoacids etc. TMG, Tubular lead, Renal threshold % of reabsorption of different substances, selective e secretion. c) Properties and composition of normal urine, urine output. Abnormal constituents in urine, Mechanism of urine concentration. Counter – Current Mechanisms: Micturition, Innervation of Bladder, Cysteurethrogram. Diuretics: Water, Diuretics, osmotic diuretics, Artificial kidney Renal function tests – plasma clearance Actions of ADH, Aldosterone and PTH on kidneys. Renal function tests	
Unit 10	Reproductive system and Muscular system a) Reproductive system b) Function of Reproductive system, Puberty, male reproductive system. Functions of testes, spermatogenesis site, stages, factors influencing semen. Endocrine functions of testes Androgens – Testosterone structure and functions. Female reproducive syustem. Ovulation, menstrual cycle.	(
	Physiological changes during pregnancy, pregnancy test. Lactation: Composition of milk factors controlling lactation. Muscle nerve physiology c) Classification of muscle, structure of skeletal muscle, Sarcomere contractile proteins, Neuromuscular junction. Transmission across, Neuromuscular junction. Excitation contraction coupling. Mechanism of muscle contraction muscle tone, fatigue Rigour mortis	
Unit 11	<u>Skin</u>	
	 a) structure and function b) Body temperature measurement, Physiological variation c) Regulation of body Temperature by physical chemical and nervous mechanisms .Role of Hypothalamus, Hypothermia and fever. 	С

BCT 103: BIOCHEMISTRY (Theory and Practicals)

School	: SAHS	Batch: 2018-22
Progra	am: BCVT	Current Academic Year: 2018-19
Branc	h: Cardio vascularTechnology	Year: 1
1	Course Code	BCT 103
2	Course Title	BIOCHEMISTRY
3	Credit Hours	4 hour
4	Contact Hours (L-T-P)	2-1-1
	Course Status	Compulsory
5	Course Objective	• To trained the students in the
		management of medical laboratory along
		with handling a variety of laboratory
		chemicals and instruments including
		electronic and advanced equipment's
		used in modern medical laboratories.
		To make the students able to do routine
		laboratory testing under stipulated
		conditions.
		To prepare specimens and operate
		machines that automatically analyse
		samples.
		To provide the conceptual basis for
		understanding biochemical and
		particularly address the fundamental
		mechanisms of the biomolecules to
		facilitate the life.
		To develop diagnostic skills in clinical
		biochemistry and to provide an advanced
		understanding of the core principles and
		topics of Biochemistry and their
		experimental basis.

6	Course Outcomes	CO1: To understand the importance of sampling techniques CO2: To understand the importance of different types of glassware's CO3: To understand the importance of different types of equipment's CO4: To understand the importance of acid, base and buffer CO5: To understand the importance of chemistry of carbohydrates and lipids	
7	Course Description	 Introduction of Glasswares and Laboratory Equipments Safety of measurements in Laboratory, Sampling technique and its preservation Preparation of Solutions Acid, Base and Indicators Nutrition Carbohydrate, Lipid, Proteinand Nucleotide Chemistry Enzymes, minerals, vitamins and cell biology 	
8	Outline syllabus Theory	I	CO mapping
	Unit 1	Introduction of Glasswares and laboratory equipments	CO1, CO2
		 a. Pipettes, Burettes, Beakers, Petri dishes, depression plates; Flasks - different types; Volumetric, round bottomed, Erlemeyer conical etc. b. Water bath: Use, care and maintenance. Oven & Incubators. c. Refrigerators, cold box, deep freezers. Colorimeter and spectrophotometer. 	
	Unit 2	Safety of measurements in Laboratory,	CO1,
		Sampling technique and its preservation a. Different types of samples such as urine,	CO2
		blood, stool, tissue etc and various	
		techniques to preserve the samples.	
		b. Preparation of percentageand normal	

		solution.	
		c. Preparation of molar and molal solution.	
	Unit 3	Acid, Base, Indicators and Nutrition	CO1,
		,,	CO3
		a. Acid- base indicators: Definition, concept,	
		mechanism of action.	
		b. Importance of nutrition: Calorific values,	
		Respiratory quotient, Energy requirement	
		of a person - Basal metabolic rate.	
		c. Balanced diet, recommended dietary	
		allowances, Role of carbohydrates, lipid	
		and protein in diet.	
	Unit 4	Carbohydrate Chemistry	CO1, CO4
		1. Definition, general classification with examples.	CO4
		2. Glycosidic bond, Structures, composition,	
		sources, properties and functions of	
		Monosaccharide's and Disaccharides.	
		3. Structures, composition, sources, properties and	
		functions of Oligosaccharides and	
		Polysaccharides.	
	Unit 5	Lipid Chemistry	CO1, CO5
		a. Definition, classification, properties and	-
		functions of Fatty acids.	
		b. Triacylglycerol and Phospholipids.	
		c. Cholesterol, Essential fatty acids and their	
		importance, Lipoprotein.	
	Unit 6	Amino-acid Chemistry	CO1, CO2
		1. Amino acid chemistry: Definition,	
		Classification, Peptide bonds. Peptides:	
		Definition, Biologically important peptides.	
		2. Protein chemistry: Definition, Classification,	
		Functions of proteins,	
		3. Primary, Secondary, tertiary and quartenary	
		structure of proteins	

Unit 7	Enzymes	CO1, CO2
	1. Definition, Active site, Cofactor (Coenzyme,	
	Activator), Proenzyme. Classification with	
	examples, Factors effecting enzyme activity.	
	2. Enzyme inhibition and significance,	
	3. Isoenzymes, Diagnostic enzymology (clinical	
	significance of enzymes)	
Unit 8	Mineral metabolism	CO1, CO3
	 Definition, Sources, RDA, absorption, transport, and excretion of various minerals. Functions of various minerals Disorder of various minerals (Sodium, Potassium, Calcium, Phosphate, Sulphur, Iron, Magnesium, Fluoride, Selenium, Zinc and Copper) 	
Unit 9	Vitamins	CO1, CO4
	 Definition, classification according to solubility, Sources and Coenzyme forms of different vitamins Functions, RDA, digestion, absorption and transport of various vitamins. Deficiency and toxicity of various vitamins 	
Unit 10	Cell Biology, Nucleotide and Nucleic acid Chemistry	CO1, CO5
	1. Cell structure, Cell membrane structure and	
	function, various types of absorption.	
	Intracellular organelles and their functions,	
	briefly on cytoskeleton.	
	2. Nucleotide chemistry: Nucleotide	
	composition, functions of free nucleotides in	
	body.	
	3. Nucleic acid (DNA and RNA) chemistry:	
	Differencebetween DNA and RNA, Structure	
	of DNA (Watson and Crick model), Functions	

		of DNA. Structure and functions of tRNA,	
		, and the second	
		rRNA, mRNA.	
1	G G I	DCT 103	
1	Course Code	BCT 103	
2	Course Title	BIOCHEMISTRY (LAB)	
3	Hours	1hr/week	
4	Contact Hours (L-T-P)	0-0-1	
5	Course Outcomes	CO1: To understand the importance of sampling	
		techniques	
		CO2: To understand the importance of different types of glass wares and equipments	
		CO3: To understand the importance of different types	
		of acid, base and buffers	
		CO4: To understand the importance of carbohydrates CO5: To understand the importance of proteins	
		CO3. To understand the importance of proteins	
6	Course Description	Introduction of Glassware's	
		 Introduction of Laboratory Equipment's 	
		 Safety of measurements in Laboratory, 	
		Preparation of Solutions	
		Determination of strength of acids and	
		bases	
		 Qualitative analysis of Carbohydrates and 	
		proteins	
	Practicals		CO mapping
	Unit 1	a. Introduction to Laboratory apparatus -1	CO1, CO2
		b. Introduction to Laboratory apparatus -2	
		c. Maintenance of Laboratory apparatus-3	
	Unit 2	a. Introduction to Laboratory glassware's -1	CO1, CO2
		b. Introduction to Laboratory glassware's -2	
		c. Maintenance of Laboratory glassware's	
	Unit 3	a. Safety measurements in Biochemistry lab	CO1, CO2
		b. General laboratory protocols	
		c. Awareness in a lab	
	Unit 4	a. Preparation of acids of different	CO1, CO3

	concentration	
	b. Preparation of bases of different	
	concentration	
	c. Preparation of solutions of different	
	concentration	
TI	D	GO1 GO2
Unit 5	a. Determination of the strength of NaOH	CO1, CO3
	solution	
	b. Determination of the strength of HCl	
	solution	
	c. Determination of the strength of NH ₄ OH	
	solution	
	Solution	
Unit 6	a. Preparation of acids of different	CO1, CO3
	concentration-1	,
	b. Preparation of acids of different	
	concentration-2	
	c. Preparation of acids of different	
	concentration-3	
Unit 7	a) Preparation of bases of different	CO1, CO3
	concentration-1	,
	b) Preparation of bases of different concentration-2	
	c) Preparation of bases of different	
	concentration-3	
Unit 8	a. Preparation of solutions of different	CO1, CO3
	concentration-1	
	b. Preparation of solutions of different	
	concentration-2	
	c. Preparation of solutionsof different	
	concentration-3	
Unit 9	a) Qualitative analysis of Carbohydrates-1	CO1, CO4
	b) Qualitative analysis of Carbohydrates-2	•
	2) Quantum ve unaryons of Curbon yaranes-2	

	c)	Qua			
Unit 10	a) b) c)	Qı	CO1, CO5

BCT 104: Pathology &BCT 104: Pathology (Lab)

School: SAHS		Batch: 2018-22	
Prog	gram: BCT	Current Academic Year: 2018-19	
Brar	nch: Cardiovascular	Term: 1	
Tech	nology		
1	Course Code	BCT 104	
2	Course Title	Pathology	
3	Credit Hours	4	
4	Contact Hours (L-T-P)	2-1-2	
	Course Status	Compulsory	
5	Course Objective	 Able to perform various techniques of histopathology and will have good concept of biomedical waste management. Able to perform urine examination, body fluid examination, CSF examination, sputum examination, stool examination etc. Aable to perform certain blood tests in hematology. Able to apply knowledge of clinical pathology in the diagnosis Able to apply knowledge of clinical pathology in the management of disease. 	
6	Course Outcomes	CO1: To understand the techniques of histopathology and biomedical waste management CO2: To understand the importance of various body fluid examinations CO3: To understand the importance of various blood test CO4: To understand the importance of correct diagnosis of disease by histopathological techniques CO5: To understand the importance of management of disease	
7	Course Description	HistopathologyClinical pathologyHematology	
8	Outline syllabus Theory		
	Unit 1	Histopathology-1	
		a) Introduction to histopathology	CO1
		Receiving of specimen in the laboratory	
		b) Grossing techniques	
		Mounting techniques – various moutants	

	c) Maintenance of records and filling of the slides	
Unit 2	Histopathology-2	
	a) Use & care of Microscope b) Various Fixatives, Mode of action c) Preparation and Indication of fixatives	COI
Unit 3	Histopathology-3	
	Bio-Medical waste management a)Section Cutting b)Tissue processing for routine paraffin sections c)Decalcification of Tissues. Staining of tissues - H& E Staining	CO1, CO2
Unit 4	Clinical pathology-1	
	 a) Introduction to Clinical Pathology b) Collection, Transport, Preservation, and c) Processing of various clinical specimens 	CO2, CO3
Unit 5	Clinical pathology-2	
	 a) Urine Examination – Collection and Preservation of urine. Physical, chemical, Microscopic Examination b) Examination of body fluids. c) Examination of cerebro spinal fluid (CSF) Sputum Examination. Examination of feces 	CO2, CO3
Unit-6	Hematology-1	
	 a) Introduction to Haematology b) Normal constituents of Blood, their structure and function c) Applied 	CO3, CO4
Unit-7	Hematology-2	
	 a) Collection of Blood samples b) Various Anticoagulants used in Haematology c) Various instruments and glassware used in Haematology, Preparation and use of glassware 	CO3, CO4
Unit-8	Hematology-3	
	 a) Laboratory safety guidelines b) SI units and conventional units in Hospital Laboratory c) Hb,PCV,ESR 	CO4, CO5
Unit-9	Hematology-4	
	a) Normal Hemostasis,b) Bleeding time, Clotting time, Prothrombin time,	CO4, CO5

		Activated Partial Thromboplastin Time	
		c) Applied	
	Unit-10	Hamatala av 5	
	Unit-10	Hematology-5	
		a) Blood bank introduction	CO5
		b) Blood grouping and Rh types	
		c) Cross matching

Tech	ınology		
1	Course Code	BCT 104	
2	Course Title	Microbiology	
3	Credit Hours	4	
4	Contact Hours	2-1-2	
	(L-T-P)		
	Course Status	Compulsory	
5	Course Objective	1. Able to collect and dispatch specimen for	
		routine investigation	

6	Course Outcomes	2. Able to interpret commonly done bacteriological and serological investigations 3. Able to control hospital infections 4. Able to manage biomedical waste management 5. Able to understand immunisation schedule CO1: To understand the techniques of specimen collection CO2: To understand the importance of bacteriological and serological investigations CO3: To understand the importance of nosocomial infection complication CO4: To understand the importance of biochemical waste management CO5: To understand the importance microscopy and their handling techniques and staining procedures	
7	Course Description	 Classification, growth and nutrition of microorganism Steriliation and disinfection Immunology Systemic bacteriology Parasitology Mycology Virology Hospital infection Biomedical waste management 	
8	Outline syllabus		
	Theory Unit 1	Classification of microorganism	
	Omt 1	a) Classification of microorganism, b) size, shape and structure of bacteria. c) Use of microscope in the study of bacteria	CO1
	Unit 2	Growth and nutrition	
		a) Nutrition of bacteriab) growth and multiplications of bacteria,c) use of culture media in diagnostic bacteriology	CO1, CO2
	Unit 3	Sterilisation and Disinfection	
		 a) Principles and use of equipments of sterlization namely Hot Air oven, Autoclave and serum inspissrator. b) Pasteurization, Antiseptic and disinfectants. c) Antimicrobial test 	CO1, CO2
	Unit 4	Immunology	
		a) Immunity vaccines, types of vaccine and immunization schedule	CO1, CO2, CO3

3 Credit Ho	irs 1	
2 Course T	tle Microbiology (LAB)	
1 Course Co	de BCT 104	
	b) Practice c) Applied	
	a) Principle b) Practice	CO4,CO5
Unit-10	Biomedical waste management	
	b) investigation c) prevention and control Hospital infection	, <u>-</u>
	a) Causative agents, transmission methods,	CO4, CO5
Unit-9	Hospital infection	
	 a) General properties of viruses, diseases caused, b) lab diagnosis and prevention of following viruses, Herpes, Hepatitis, c) HIV, Rabies and Poliomyelitis 	CO3, CO4, CO5
Unit-8	Virology	
	 a) Morphology, diseases caused and lab diagnosis of following fungi, Candida, b) Cryptococcus, Dermatophytes, c) opportunistic fungi 	CO3, CO4
Unit-7	Mycology	
	 a) Morphology, life cycle, laboratory diagnosis of following parasitesE. histolytica, b) Plasmodium, c) Tape worms, Intestinal nematodes 	CO3, CO4
Unit-6	Parasitology	G02 G04
	Gonococci, Menigococci, c) C diphtheriae, Mycobacteria, Clostridia, Bacillus, Shigella, Salmonella, Esch coliKlebsiella, Proteus,vibrio cholerae, Pseudomonas & Spirochetes	
	following bacteria(the classification, antigenicstructure and pathogenicity are not to be taught) b) Staphyloccci, Streptococci, Pneumococci,	
Omt 5	a) Morphology, cultivation, diseases caused ,laboratory diagnosis includingspecimen collection of the	CO2, CO3
Unit 5	c) Rapid tests for HIV and HbsAg	
	b) Principles and interpretation of commonly done serological tests namely Wida, VDRL,ASLO,CRP,RF & ELISA	

4	Contact Hours (L-T-P)	0-0-2	
5	Course Outcomes	CO1: To understand the importance of compound microscopy CO2: To understand the importance of sterilizartion CO3: To understand the importance of serological tests CO4: To understand the importance of gram staining CO5: To understand the importance of biomedical waste management	
6	Course Description	MicroscopyClinical pathologyHematology	
	Practicals		
	Unit- 1	a)Handling of microscopeb) Use of microscopec) Safety measures	CO1
	Unit-2	 a) Use of culture media b) Nutrient broth, nutrient agar,blood agar c) Chacolate agar, Mac conkey medium, LJ media, Robertson Cooked meat media, Potassium tellurite media with growth, 	CO1,CO2
	Unit-3	 a) Demonstration and sterlization of equipments Hot Air oven, Autoclave, Bacterial filters b) Mac with LF & NLF, NA with staph Antibiotic susceptibility test c) Other 	CO2
	Unit-4	Demonstration of common serological tests – a) Widal, b) VRDL, c) ELISA	CO2,CO3
	Unit 5	a) Gram stainingb) Acid fast stainingc) Applied	CO3,CO4
	Unit-6	Stool examination for a) Ova b) Cyst	CO3,CO4

	c)	Parasite		
Unit-7	Lab diagno a) car b) de c) op	CO4		
Unit-8	La a) b) c)	b diagnosis of Herpes Hepatitis, H Poliomyeliti	IV, Rabies	CO4

4	Contact Hours (L-T-P)	2-0-0
	Course Status	Compulsory
5	Course Objective	 Able to understand the techniques management and organizational behaviour Able to understand the quality control and hospital information system Able to understand the principle of CDM Able to know data management Able to manage material and inventory control,storage, equipment/operation .
6	Course Outcomes	CO1: To understand the techniques management and organizational behaviour CO2: To understand the importance of quality control and hospital information system CO3: To understand the importance of CDM CO4: To understand the importance of documents in data management and material management and inventory control CO5: To understand the importance of storage techniques

		and equipments/operation management	
7	Course Description	 Introduction to Management Organizational behaviour Quality Control Hospital Information System Introduction and Principles of CDM Documents in data Management Material management and Inventory Control Storage Equipment/ Operations management 	
8	Outline syllabus Theory		
	Unit 1	Introduction to Management:	
		 a) Definition, Concepts, b) Principles, various models, c) Management components i.e. Planning, Organizing, Staffing, Motivating, Leading, Coordination and Controlling. 	CO1
	Unit 2	Organizational behaviour	
		 a) Concept of Organizational Behaviour b) Major Components of organizational behaviour Personality development, Motivation, Group, Leadership, c) Cooperation and Conflict 	CO1
	Unit 3	Quality Control:	
		a)Definition of Quality, Dimensions of Quality, b) Basic concepts of Total Quality Management, c) Quality Awards	CO2
	Unit 4	Hospital Information System:	
		 a) Hospital Information System b) Management and software applications in registration, billing, investigations, reporting, medical records management, information processing, c) Security and ethical challenges 	CO2
	Unit 5	Introduction and Principles of CDM:	

	a) CDM Process; Data entry methods of CDM;b) SOPs on CDM; Data coding and decoding;c) Medical Dictionaries	CO3
Unit-6	Documents in data Management:	
	 a) Prescription, CaseReport form, Source documents, Informed consent form, Patient information sheet, b) Clinical study report, c) Log books, Master files 	CO4
Unit-7	Material management and Inventory Control:	
	 a) Concept, Materials Planning, Classification of Materials-Consumable and Non consumable, working out quantities required, forecasting, b) Budgeting, various costs of inventory, c) Inventory techniques-ABC, SDE / VED Analysis, EOQ models. 	CO4
Unit-8	Storage:	
	 a) Importance and functions of storage, b) Location and layout of stores, c) Management of receipts and issue of materials from stores, Warehousing costs, Stock verification 	CO5
Unit-9	Equipment/ Operations management:-1	
	 a) hospital equipment repair and maintenance, types of maintenance, b) job orders, equipmentmaintenance log books, AMCS, c) outsourcing of maintenance services, 	CO5
Unit-10	Equipment/ Operations management:-2	
	 a) quality and reliability, b) concept of failure, equipment history and documents, replacement policy, calibration tests, spare parts, c) stocking techniques and polices 	CO5

BCT 201: Applied Pathology &BCT 201: Applied Pathology(Lab)

School: SAHS		Batch: 2018-22	
Program: BCT		Current Academic Year: 2019-2020	
	nch: Cardiovascular	Term: 2	
Tech	nology		
1	Course Code	BCT 202	
2	Course Title	Applied Pathology	
3	Credit Hours	4	
4	Contact Hours (L-T-P)	3-1-2	
	Course Status	Compulsory	
5	Course Objective	Able to understand the progression of diseases related to various system of body.	
		Able to identify, diagnose and describe the disease from specimen	
		 Able to identify, diagnose and describe the disease from certain blood tests. 	
		Able to understand basic pathological principle in course of diagnosis of disease	
		5. Able to relate pathological diagnosis with disease progression	
6	Course Outcomes	CO1: To understand the importance of disease progression mechanism CO2: To understand the importance of techniques of specimen collection CO3: To understand the importance of techniques of performing certain blood tests CO4: To understand the importance of diagnosing diseases CO5: To understand the importance of interrelating disease progression with pathological change	
7	Course Description	 Cardiovascular system Hematology Respiratory system Renal system 	
8	Outline syllabus Theory		
	Unit 1	Cardiovascular system-1	
		a) Atherosclerosis- Definition, risk factors,	CO1
	1		I

ı		Т
	briefly Pathogenesis & morphology,	
	clinical significance and prevention.	
	b) Hypertension- Definition, types and	
	briefly Pathogenesis and effects of	
	Hypertension.	
	c) Aneurysms – Definition, classification,	
	Pathology and complications	
	, ame comprised	
Unit 2	Cardiovascular system-2	
	a) Pathophysiology of Heart failure.	CO1, CO2
	b) Cardiac hypertrophy – causes,	
	Pathophysiology & Progression to Heart	
	Failure. c) Ischaemic heart diseases- Definition,	
	Types. Briefly Pathophysiology, Pathology	
	& Complications of various types of IHD	
Unit 3	Cardiovascular system-3	GO1 GO2
	a) Valvular Heart diseases- causes, Pathology &	CO1, CO2, CO3
	complication.	CO3
	b) Complications of artificial valves.	
	c) Cardiomyopathy – Definition, Types, causes and	
	significance	
Unit 4	Cardiavasaular system 4	
UIIIt 4	Cardiovascular system-4 a) Pericardial effusion- causes, effects and	CO2, CO3
	diagnosis.	602, 603
	b) Congenital heart diseases – Basic defect	
	and	
	c) effects of important types of congenital	
	heart diseases.	
Unit 5	Hematology-1	
	a) Anaemia – Definition, morphological	CO3
	types and	
	b) diagnosis of anaemia.	
	c) Brief concept about Haemolytic anaemia and polycythaemia	
	ани рогусунтаетта	
TI 'A C	Н (1 2	
Unit-6	Hematology-2	
	a) Leukocyte disorders- Briefly	CO3
	leukaemia, leuko cytosis, agranulo cytosis	
	etc.,	
	b) Bleeding disorders- Definition,	
	classification, causes & effects of	
	1	i .

		important types of bleeding disorders.	
		c) Briefly various laboratory tests used to	
		diagnose bleeding disorders	
	Unit-7	Respiratory system-1	
		a) Chronic obstructive airway diseases –	CO4
		Definition and types.	
		b) Briefly causes, Pathology and	
		complications of each type of COPD.	
		c) Briefly concept about obstructive versus	
		restrictive pulmonary disease	
	Unit-8	Respiratory system-2	
,		a) Pneumoconiosis- Definition, types,	CO4
		Pathology and effects in brief.	
		b) Pulmonary congestion and edema.c) Pleural effusion – causes, effects and	
		diagnosis.	
	Unit-9	Renal system-1	
		a) Clinical manifestations of renal diseases.	CO5
		b) Briefly causes, mechanism, effects and laboratory	
		diagnosis of ARF & CRS.	
		c) Briefly Glomerulonephritis and Pyelonephritis	
	Unit-10	Renal system-2	
		a) End stage renal disease – Definition,	CO5
		causes, effects and b) role of dialysis and renal transplantation	
		in its management	
		c) Brief concept about obstructive	
		uropathy.	
1	Course Code	BCT 202	
2	Course Title	Applied pathology (LAB)	
			1
3	Credit Hours	1	

6	Course Outcomes Course Description	CO1: To understand the importance of diagnosing disease from gross specimen CO2: To understand the importance of interpretation and diagnosis from haematological chart CO3: To understand the importance estmation of hemoglobin CO4: To understand the importance performing certain blood tests CO5: To understand the importance of pathological maneuver in diagnosing the disease • Gross specimen – various disease • Diagnosis and interpretation by charts	
		Hematological tests	
	Practicals		
	Unit- 1	Atherosclerosis a) Description b) Diagnosis c) Interpretation	CO1
	Unit-2	Aortic aneurysm a) Description b) Diagnosis c) Interpretation	CO1

1	Course Code	BCT 202
2	Course Title	Applied Microbiology
3	Credit Hours	4
4	Contact Hours	2-1-2
	(L-T-P)	
	Course Status	Compulsory
5	Course Objective	 Able to understand health care associated infections, antimicrobial resistance, Able to understand health care associated disease communicable to health care workers in hospital setup and its preventive measures. Perform microbiological surveillance and sampling. Able to understand the methodology of disinfection of instruments, patient care unit, ICU's, various methods of sterilization of room, Able to understand the methodology of disinfection equipments, central supply department, sterilization techniques
6	Course Outcomes	CO1: To understand the importance of health care associated infection and antimicrobial resistance CO2: To understand the importance of disease communicable in hospitals and preventive measures CO3: To understand the importance of microbiological surveillance and sampling CO4: To understand the importance of diagnosing diseases CO5: To understand the importance of sterilization

		techniques	
7	Course Description	 Health care associated infections and Antimicrobial resistance Disease communicable to Healthcare workers in hospital set up and its preventive measure Microbiological surveillance and sampling Sterilization and importance of sterilization Preparation of materials for autoclaving 	
8	Outline syllabus Theory		
	Unit 1	Health care associated infections and Antimicrobial resistance-1 Infections that patients acquire during the course of receiving treatment for other conditions within a healthcare setting like a) Methicillin Resistant Staphylococcus aureus infections, b)Infections caused by Clostriduium difficle, c)Vancomycin resistant enterococci etc	CO1
	Unit 2	a) Catheter related blood stream infections, Ventilator associated pneumonia, Catheter Related urinary tract infections, b) Surveillance of emerging resistance and changing flora. c) The impact and cost attributed to Hospital Associated infection	CO1
	Unit 3	Disease communicable to Healthcare workers in hospital set up and its preventive measure-1	
		Occupationally acquired infections in healthcare professionals by respiratory route a) Tuberculosis, b) Varicella-zoster, c) Respiratory synctial virus etc	CO2
	Unit 4	Disease communicable to Healthcare workers in hospital set up and its preventive measure-2 Occupationally acquired infections in healthcare professionals by	CO2, CO3
		respiratory route a) Blood borne transmission (HIV, Hepatitis B, Hepatitis C, Cytomegalovirus, Ebola virus etc), b) Oro faecal route (Salmonella, Hepatitis A etc), c) Direct contact (Herpes Simplex Virus etc).	

Unit 5	Disease communicable to Healthcare workers in hospital set up and its preventive measure-3 Preventive measures to combat the spread of these infections by a) monitoring b) control c) Observation	CO3
Unit-6	Microbiological surveillance and sampling-1	
	Required to determine the frequency of potential bacterial pathogens including a) Streptococcus pneumoniae, b) Haemophilus influenzae, and Moraxella catarrhalis and c) Also to assess the antimicrobial resistance	CO3
Unit-7	Microbiological surveillance and sampling-2 Sampling: a) rinse technique, b) direct surface agar plating technique. c) other	CO4
Unit-8	Importance of sterilization:	
	 a. Disinfection of instruments used in patient care: Classification, different methods, advantages and disadvantages of the various methods b. Disinfection of the patient care unit c. Infection control measures for ICU's 	CO4,CO5
Unit-9	Sterilization	
	 a) Rooms: Gaseous sterilization, one atmosphere uniform glow discharge plasma (OAUGDP) b) Equipments: classification of the instruments and appropriate methods of sterilization c) Central supply department: the four areas and the floor plan for instrumentCleaning, high-level 	CO5

		disinfecting and sterilizing areas	
	Unit-10	Preparation of materials for autoclaving	
		a) Packing of different types of materials,b) loading,c) holding time and unloading.	CO5
1	Course Code	BCT 202	
2	Course Title	Applied Microbiology (LAB)	
3	Credit Hours	1	
4	Contact Hours (L-T-P)	0-0-2	
5	Course Outcomes	CO1: To understand the importance of autoclaving & quality control CO2: To understand the importance of Collection of specimen CO3: To understand the importance of sterility testing CO4: To understand the importance performing disinfection CO5: To understand the importance of Interpretation of results of sterility testing	
6	Course Description	 Principles of autoclaving & quality control of Sterilization. Collection of specimen from outpatient units, inpatient units, minor operation theater and major operation theater for sterility testing. The various methods employed for sterility testing. Interpretation of results of sterility testing. Disinfection of wards, OT and Laboratory 	
	Practicals		
	Unit- 1	Principle of autoclaving a) Methods b) Observations c) Precautions	CO1
	Unit-2	Quality control of sterilization a) Methodsb) Observationsc) Recautions	CO1
	Unit-3	Collection of specimen-1 a) Methods b) Observations	CO2

		c) Precautions	S	
				222
Unit-4		Collection of sp	pecimen-2	CO2
		a) Methods		
		b) Observatio		
		c) Precautions	S	
Unit 5		The various me	ethods employed for sterility	CO3
		a) Methods		
		<i>'</i>	_	
		b) Observatio		
		c) Precaution	S	
Unit-6		Interpretation of	of result of sterility testing	CO3
		a) Interpretation	on	
		b) Analysis		
		c) Result		
		,		
Unit-7		Disinfection of w	ards	CO3, CO4
Oint-7		a) Methods	arus	003, 004
		b) Observation		
		c) Precaution		
		<i>-)</i>		
Unit-8		Disinfection of	of OT	CO4
		d) Methods		
		e) Observation		
		f) Precaution		
		,		
Unit-9	Disin	fection of Labora	torv	CO5
		a) Methods	,	
		b) Observation		
		c) Precaution		
Unit-10		Equipments		CO5
		a) Observati	ion	
		b) Maintena	nce	
		c) Sterilizati	ion

BCT 203: Applied Pharmacology

Scho	ool: SAHS	Batch: 2018-22	
Prog	gram: BCT	Current Academic Year: 2019-2020	
Brai	nch: Cardiovascular	Term: 2	
Tech	ınology		
1	Course Code	BCT 203	

2	Course Title	Applied Pharmacology	
3	Credit Hours	3	
4	Contact Hours (L-T-P)	2-1-0	
	Course Status	Compulsory	
5	Course Objective	 Able to understand the basic scientific concepts and principles related to pharmacokinetics, pharmacodynamics, Able to understand the drug metabolism, drug-drug interaction, route of administration, drug action, drug efficacy and potency, drug toxicity etc. Able to know various drugs and their action related to different systems of body Able to perform certain experimental pharmacology procedure. Able to understand use of drugs in various diseases 	
6	Course Outcomes	CO1: To understand the concepts of paharmacological principles CO2: To understand the mechanism of action of ANS drugs, CVS drugs, anaesthetic drugs CO3: To understand the mechanism of action of analgesics, antihistaminic, antiemetics drugs CO4: To understand the mechanism of action of CNS stimulants, depressants, emergency drugs CO5: To understand the mechanism of action of diuretics, cheomtherpy, corticosteroids	
7	Course Description	 Pharmacological principles Autonomic nerves system Cardiovascular drugs Anaesthetic drugs Analgesics drugs Antihistamine and Antiemetics CNS stimulants and depressants and inhalational gas and emergency drugs Pharmacotherapy of respiratory disorders Corticosteroids, Diuretics, Chemotherapy of infections 	
8	Outline syllabus Theory		
	Unit 1	Pharmacological principles	
		General concepts about a) Pharmacodynamic and	CO1
		b) Pharmacokinetic	

	c) Principles involved in drug activity	
Unit 2	Autonomic nerves system.	
	 a) Anatomy & functional organisation. b) List of drugs acting an ANS including dose, route of administration, indications, c) contra indications and adverse effects 	CO2
Unit 3	Cardiovascular drugs	
	 a) antihypertensives, antiarrhythmic, cardiac glycosides, sympathetic and nonsympathetic inotropic agents b) coronary vasodilators, antianginal and antifailure agents, lipid lowering & antiatherosclerotic drugs c) drugs used in hemostasis, cardioplegic drugs, primary solutions, drugs used in shock 	CO2,CO3
Unit 4	Anaesthetic drugs	
	 a) Definition of general and local anaesthetics., Classification of general anaesthetics. b) Pharmacokinetics and Pharmacodynamics of inhaled anaesthetic agents. Intravenous general anaesthetic agents. c) Local anaesthetics – classification mechanism of action, duration of action and methods to prolong the duration of action. Preparation, dose and routes of administration 	CO3
Unit 5	Analgesics drugs	
	 a) Definition and classification b) Routes of administration, dose, frequency of administration, c) Side effects and management of non opioid and opiod analgesics 	CO3
Unit-6	Antihistamine and Antiemetics	
	a) Classification, Mechanism of action,b) adverse effects,c) Preparations, dose and routes and administration	CO3
Unit-7	CNS stimulants and depressants and inhalational gas and emergency drugs	
	a) alcohol, Sedatives, hypnotics and narcotics, CNS stimulants, neuromuscular blocking agents and muscle relaxants	CO4
	b) pharmacological protection of organs during CPB	

	c) inhalational gaes and emergency drugs	
Unit-8	Pharmacotherapy of respiratory disorders	
	a) Introduction – Modulators of bronchial smooth muscle tone and pulmonary vascular smooth muscle tone b) Pharmacotherapy of bronchial asthma Pharmacotherapy of cough Mucokinetic and mucolytic agents c) Use of bland aerosols in respiratory care.	CO4
Unit-9	Corticosteroids, Diuretics, Chemotherapy of infections	
	a) Corticosteroids-Classification, mechanism of action, adverse effects and complications. Preparation, dose and routes of administration b) Diuretics • Renal physiology • Side of action of diuretics • Adverse effects • Preparations, dose and routes of administrion c) Chemotherapy of infections • Definition • Classification and mechanism of action of antimicrobial agents • Combination of antimicrobial agents • Chemoperophylaxis. • Classification, spectrum of activity, dose, routes of administration and adverse effects of penicillin, cephalosporins, aminoglycosides, tetracyclines, chloramphenicol, antitubercular drugs.	CO5
Unit-10	Miscellaneous	
	a) IV fluids- various preparations and their usage.Electrolyte supplements b) Immunosuppressive agents New drugs included in perfusion technology. c) Drugs used in metabolic and electrolyte imbalance	CO5
Mode of examination	Theory and Practical

BCT 204: INTRODUCTION TO CARDIAC CARE TECHNOLOGY

Sc	hool: SAHS	Batch : 2018-22	
Pr	ogram: BCVT	Current Academic Year: 2019-2020	
Bı	anch:	Year: 2	
Ca	ardiovascular		
Te	chnology		
1	Course Code	BCT 204	
2	Course Title	Introduction to Cardiac Care Technology	
3	Credit Credits	5	
4	Contact Hours	3-1-2	
	(L-T-P)		
	Course Status	Compulsory	
5	Course	To enables students to become a trained, qualified cardiovascular	
	Objective	technician capable of working independently or in association	
		with a higher setup.	
		To integrate knowledge and skills of cardiovascular technology to	

		provide health care solutions for the benefit of the society.							
		After the completion of program ,graduate become well- prepared							
		for work associated with assisting cardiac surgeon's in tertiary							
		care hospitals and others.							
		After the copletion of program, candidates become well known in							
		teccniques such as Electrocardiography,							
		Echocardiography, Treadmill Test/Stress test, Doppler							
		Ultrasonography and contrast Echo.							
		Graduates will have a good leadership qualities and entrepreneur							
		skills by working and communicating effectively in							
		interdisciplinary environment, either independently or with a							
		team.							
6	Course Outcomes	CO1: To apply knowledge of human cardiovascular and it's related system in the diagnosis, cardiovascular disorder & it's management. CO2: To plan and implement clinical & scientific activities related the profession of cardiovascular technology. CO3: To tackle future challenges through lifelong learning & training process related to cardiac health. CO4: To diagnose and solve complex problems arising during cardiovascular care of the patients. CO5: To utilize modern tools and techniques in the field of cardiovascular technology for patient compliance.							
7	Course Description	Introduction of Electrocardiography.							
	Description	Introduction of Echocardiography. Control of Echocardiography. Control of Echocardiography. Control of Echocardiography. Control of Echocardiography.							
		 Safety measurements during Echocardiography procedures & Limitation. 							
		• Patient preparation during Electrocardiography,							
		Echocardiography, Treadmill Test.							
		Introduction of different types of Pacemaker. Let a last in a factor of Walandary Hand Disease Granders Automateur.							
		• Introduction of (Valvular Heart Disease, Coronary Artery Disease, & Congestive Heart Disease.							
		Carbohydrate Chemistry							
		Lipid Chemistry							
8	Outline syllabu	ls							
	Theory								
	Unit 1	ECG Basic Principles.	001						
		<u>Theory:</u>	CO1						

	d) Electrocardiography & its paper.	
	b)Basic Ecg and deflections & its ecg basic action.	
	c)The leads: Standard Limb,Precardial Lead, 'V' lead & 'AV' lead Basic ECG	
	Deflections .	
Unit 2	Normal EG The 'p' wave.	
	d) The genesis of 'qrs'complex, T wave , the ST segment , The' U' wave. e) Rate & Rhythm. f) Morphology of 'P' wave .qrs complex, & T wave.	CO1, CO2
Unit 3	Electric Axis.	
	e) Precardial Pattern of ECG. f) So called rotation of the heart –The QT interval. g) The Electric Field.	CO2, CO3
Unit 4	Chamber Enlargement.	
	d) Atrial enlargement, LV Hypertrophy, RV Hypertrophy.	CO2,
	e) Principles of Bundle Branch B locks, LBBB, RBBB.	CO3, CO4
	f) The Hemiblocks.	004
Unit 5	Exercise Stress Testing.	
	d) Exercise & its protocols.	CO1
	e) Electrocardiography Measurements.	,
	f) Exercise Testing-Indications & Techniques.	CO2
		,
		CO3
Unit 6	<u>Echocardiography</u>	
	a) Basic Principles of E chocardiography.	CO1
	b) Modalities of Echo (M- mode, 2D, Color Doppler).	, CO2
	c) Transoesophageal Echocardiography.	, CO3
Unit 7	Instrumentations.	
	d) Basic pulse echo system & Transducer.	CO2
		, CO3
	e) Pulse generation & Echo Detection.	CO4
	f) Modalities, Display & Record.	04
Unit 8	Echocardiographi	
Unito		

		c Examination.	
		d) Selecting Transducer's, Position of the patient, Placement of the Transducer.	CO3
		e) Setting Control (M –mode Labelling, 2D Echo, Normal Variants, Terminology.	CO4
		f) Identification of Segments.	
	Unit 9	Doppler Echocardiography	
,		d) Introduction to Doppler Color Echocardiography the Doppler principles, Doppler ultrasound techniques, Color Doppler flow Imaging, Clinical application of Doppler Echocardiograph.	CO4 , CO5
		e) Physical principles & Instrumentation in Spectral & Color Doppler flow imaging, Physical principles & Doppler effect, The Doppler Echocardiography system. Blood Flow Pattern (Laminar & Non Laminar).	
		f) Doppler Echo Modes (Continuous Doppler System, Pulsed Doppler System, High pulse repetition frequency).	
	Unit 10	Contrast Echocardiography	
		d) Echo measurements-' ASE ' recommendation. e) Types of dye's used. f) Nephrotoxic effect of dye used in contrast echo.	CO4, CO5
1	Course Code	BCT204	
2	Course Title	INTRODUCTION TO CARDIAC CARE TECHNOLOGY (LAB)	
3	Credit Hours	1	
4	Contact Hours (L-T-P)	0-0-2	
5	Course Outcomes	CO1: To understand the importance of Electrocardiography. CO2: To understand the importance of Echocardiography. CO3: To understand the importance of Treadmill Test. CO4: To understand the importance of different types of Stress Test. CO5: To understand the importance of different types of Pacemaker,	
6	Course Description	Introduction of ECG.Introduction of Echocardiography.	

	 Introduction of Treadmill Test & Safety Precautions. 					
	 Introduction of Pacemaker & its uses. 					
	• Introduction of Pulse Oximeter & its uses.					
Practical s						
Unit 1	Practical: a)Examine the cardiovascular System. b)Explain the different types of machines used to diagnose cardiovascular disease. c)Explain about the coronary artery disease.					
Unit 2	 a) Explain about the procedure of ECG. b) Explain the different types of leads and electrodes present in ECG Device. c) Explain about the Einthoven's traingle. 	CO1 CO2				
Unit 3	a) To study the Epicardial pacing technique.b) To study the working of pulse oximeter.c) To study about coronary heart disease.	CO2 CO3				
Unit 4	 a) Explain the pretest preparation of a patient for Echocardiography. b) To demonstrate the Indication's & Contra-indication's of an Echocardoigraphy. c) Explain the different kind's of acoustic window's in Echocardiography. 	CO1 CO2 CO3				
Unit 5	 a) To demonstrate the different types of delivery routes in echocardiography b) Explain the procedure to do an Echocardiography with a neat labelled diagram. c) Explain about the different kind's of of view's in Echocardiography. 	CO3 CO4				
Unit 6	 a) Explain the procedure of Stress Echocardiography. b) Examine the different types of pharmacological drugs used during Stress Echocardiography. c) Explain the advantages and disadvantages of Stress Echocardiography. 	CO1 CO2 CO3				

Unit 7	a)Explain the procedure of Transoesophageal E chocardiography. b)Explain about the working of Pacemaker. c)Explain about the Artificial Pacemaker.								
Unit 8	a) b) c)	b) To study about Indication's & Contra-indication's of treadmill.							
Unit 9	 a) To Demonstrate the Bruce Protocol used in Treadmill Test. b) Explain about the types of Stress Testing along with indication's & contra-indication's. c) To Determine a study of Valvular Heart Disease. 								
Unit 10		d b) E:	uring Hypertens xplain the differ	sion. ent types	Hypertension & the moor of routs to administer of the street of the street with the street win		CO4, CO5

BCT 301: Cardiac Care Technology- Clinical& BCT 301: Cardiac Care Technology - Clinical-(Lab)

School: SAHS		Batch : 2018-22					
Program: BCVT Branch:		Current Academic Year: 2020-2021					
		Year: 3					
	ardiovascular						
	echnology						
1	Course Code	BCT 301					
2	Course Title	Cardiac Care Technology clinical					
3	Credit Hours	8					
4	Contact Hours	4-2-4					
	(L-T-P)						
	Course Status	Compulsory					
5	Course Objective	To trained the students in the understanding of cardiac disease					
		development					
		To make the students able to do routine investigation to identy					
		various cardiac disease					
		To prepare students for provind assistance to cardiologist					
		To provide the conceptual basis for understanding of various					
		maneuver for diagnosis and interpretation of cardiac disease					
		To develop diagnostic skills in cardiovascular technology					
6	Course Outcomes	Graduates will be able to understand normal ECG, basic abnormalities of ECG in various disease,					
		Graduates will be able to understand findings of ECHO in various diseases					
		3. Graduates will be able to know equipment details, handling					

		and radiation hazards of cardiac catheterization lab.				
		4. Graduates will be able to know materials used in cath. lab and their sterilization technique				
	5. Graduates will be able to know different aspects of coronary angiography and peripheral angiogram.					
7	Course Description	 Interpretation of Normal ECG and Basic abnormalities of ECG in RHD, IHD & CHD Echo in RHD,CHD,IHD, pericardial disease and other CVD Assessment of cardiac function Cardiac catheterization and coronary angiogram 				
8	Outline syllabu	ls				
	Theory					
	Unit 1	Interpretation of Normal ECG and Basic abnormalities of ECG in RHD, IHD & CHD				
		a) Normal ECG	CO1			
		b) Abnormalities				
		c) Interpretation				
	Unit 2	Echo in rheumatic heart disease				
		 a) Echo in mitral stenosis, mitral incompetence, b) aortic stenosis, aorticincompetence, pulmonary hypertension. c) Post AVR, post MVR. Prosthetic valve malfunction, LA clot. 	CO2			
	Unit 3	Echo in congenitial heart disease				
		a) Echo in ASD, VSD, PDA, b) pulmonary stenosis, aortic stenosis, c) coarctation of aorta, TOF. dextrocardia.	CO2			
	Unit 4	Echo in ischemic heart disease				
		a) Echo in acute myocardial infarction, old myocardial infarction and b) other ischemic heart disease related conditions, c) LV aneurysm	CO2, CO3			
	Unit 5	Echo in other cardiovascular disease				
	CIII S	a) Echo in various types of cardio myopathy infective endocardities diseases of aorta, a)	CO2, CO3			
		b) Mitral valve prolapse,				

	c) Myxoma and other cardio vascular diseases.						
TI. *A C							
Unit 6	Assessment of Cardiac function a) Measurements of all cardiac chambers	CO2 CO					
	a) Weasurements of all cardiac chambers	CO2,CO					
	b) Assessment of cardiac function						
	c) Abnormalities						
Unit 7	Echo in pericardial disease						
	a) Pericardial effusion,	CO2,CO					
	b) Cardiac temponade,	3					
	c) Constructive pericarditis						
Unit 8							
	Cardiac catheterisation laboratory						
	a) General details of cardiac catheterisation equipment;	CO4					
	b) How to handle the machine, common problems one may come						
	across;						
	c) How to overcome it, radiation hazards.						
Unit 9	Unit 9 Materials used in the cathlab						
	a) All catheters, balloons, guidewires, pacemakers contrast material;	CO4					
	b) Other material used in the cardiac catheterisation						
	laboratory;						
	c) Sterilization of all these materials						
Unit 10	Right						
	heart						
	catheteri sation						
	a) Procedure;Cath position;	CO5					
	b) Oxymetry at various levels;						
	c) Angios done and its interpretation						
Unit 11	Left heart catheterisation						
	a) Procedure;Cath position;	CO5					
	b) Oxymetry at various levels;c) Angios done and its interpretation						
	by Angles done and its interpretation						
Unit-12	Coronary angiogram						
	a) Procedure,Materials used,	CO5					

		 b) Type and amount dye used, Indications and contraindications, c) Various pictures recorded in various angles and gross interpretation. 	
	Unit-13	Peripheral angiogram	
		a) Procedure, Materials used, b) Type and amount dye used, Indications and contraindications, Various pictures recorded in various angles and gross interpretation	CO5
1	Course Code	BCT 301	
2	Course Title	Cardiac Care Technology-Clinical (LAB)	
3	Credit Hours	2	
4	Contact Hours (L-T-P)	0-0-4	
5	Course Outcomes	 Graduates will be able to understand normal ECG, basic abnormalities of ECG in various disease, Graduates will be able to understand findings of ECHO in various diseases Graduates will be able to know equipment details, handling and radiation hazards of cardiac catheterization lab. Graduates will be able to know materials used in cath. lab and their sterilization technique Graduates will be able to know different aspects of coronary angiography and peripheral angiogram. 	
6	Course Description	 Interpretation of Normal ECG and Basic abnormalities of ECG in RHD, IHD & CHD Echo in RHD,CHD,IHD, pericardial disease and other CVD Assessment of cardiac function Cardiac catheterization and coronary angiogram 	
	Practicals Unit 1	a) Normal ECGb) Abnormalities	CO1

	c) Interpretation	
Unit 2	 a) Echo in mitral stenosis, mitral incompetence, b) Echo in aortic stenosis, aorticincompetence, pulmonary hypertension. c) Echo in Post AVR, post MVR. Prosthetic valve malfunction, LA clot. 	CO2
Unit 3	a) Echo in ASD, VSD, PDA, b) pulmonary stenosis, aortic stenosis, c) coarctation of aorta, TOF. Dextrocardia	CO2
Unit 4	 a) Echo in acute myocardial infarction, old myocardial infarction and b) other ischemic heart disease related conditions, c) LV aneurysm 	CO2
Unit 5	 a) Echo in various types of cardio myopathy infective endocardities diseases of aorta, b) Mitral valve prolapse, c) Myxoma and other cardio vascular disease 	CO2
Unit 6	a) Measurements of all cardiac chambers b) Assessment of cardiac function c) Abnormalities	CO3
Unit 7	Echo a) Pericardial effusion, b) Cardiac temponade, c) Constructive pericarditis	CO2,
Unit 8	a) General details of cardiac catheterisation equipment; b) How to handle the machine, common problems one may come across; c) How to overcome it, radiation hazard	CO3, CO4
Unit 9	Materials in cath lab. a) All catheters, balloons, guidewires, pacemakers contrast material; b) Other material used in the cardiac catheterisation laboratory; c) Sterilization of all these materials	CO3, CO4

Unit 10	a) Pr b) Ox c) Ar	CO5		
Unit 11	a) Pr b) Ty c) Va		sed, used, Indications and contraindicatio ded in various angles and gross	ns,

8	Outline syllabu	ıs	
	Theory		
	Unit 1	ECG in myocardial infarction	
		 a) Definition of myocardial infarction, Diagnosis of myocardial infarction, 	CO1
		b) ECG criteria for myocardial infarction,c) ECG in anterior wall, inferior wall,	
		True posterior wall and sub endocardial infarction and RV infarction	
	Unit 2	ECG in rheumatic heart disease	
		a) Definition of rheumatic heart disease,	CO1
		b) Valvular invovement in rheumatic heart disease,	
		c) ECG in mitral stenosis, mitral incompetence, aortic stenosis	
		and aortic incompetenance	
	Unit 3	ECG in hypertension	CO1
		a) Definition of hypertension,b) How to record blood pressure,c) ECG in hypertension	
	Unit 4	ECG in congenital heart disease	
٠		 a) Common congenital heart disease ASD, VSD, PDA, b) pulmonary stenosisaortic stenosis, coarctation of aorta, c) TOF, definition of all these conditions , ECG changes in all these conditions 	CO1
	Unit 5	ECG in other conditions	
		 a) ECG in various types of cardiomyopathy, myxoedema, b) pericardial effusion, acute pericardities and other vascular diseases. c) Bundle branch block, WPW syndrome, dextrocardia 	CO1
	Unit 6	Trans esophageal echocardiogram	
		a) Indications, Procedure,b) Usefulness,c) Complications one may encounter and its management	CO2

	Unit 7	Stress Echo	
		a) procedureb) indicationsc) Precautions	CO2
	Unit 8	Peripheral Doppler	
		a)Procedure and b) usefullness of peripheral Doppler c) indications and contraindications	CO2
	Unit 9	Coronary angioplasty	
		a) Procedure, b) Materials used, c) Complication one may encounter and how to manage it	CO3, CO4
	Unit 10	Periphera I angioplas	
		a) Procedure, b) Materials used, c) Complication one may encounter and how to manage it	CO3, CO4
	Unit 11	Fetal echocardiogram	
		a) Procedure,b) Basic interpretationc) indications	CO2
	Unit-12	Contrast echocardiogram	
		a) procedure and b) usefullness of contrast echocardiogram c) indications	CO4, CO5
	Unit-13	Myocardial contrast echo	CO3,CO4 , CO5
		a) indications	,
		b) contraindications c) procedure

	Course Description	 Cardiac monitoring Interpretation of TMT Use of defibrillator Management of cardiac arrest Myocardial perfusion scan Cardiac arrhythmias Electrolyte disturbances Holter monitoring Valvoplasties Coil closure and device closure of PDA Device closure of ASD,VSD Pressure recording, pacing, pregnancy, nuclear cardiology
	Outline syllabu Theory	S

Unit 1	Cardiac monitoring	
	 a) Definition, b) Purpose of cardiac monitoring, c) How to Recognise various arrhythmias How to set up a intensive coronary care unit and usefullness of ICCU 	CO1
Unit 2	Interpretation of TMT	
	 a) Criteria for TMT positive test contraindication for TMT conditions where TMT is not useful, b) Complications that may occur in TMT room and its management c) Others 	CO1
Unit 3	Use of defibrillator	
	 a) Indications, b) How to use the defibrillator, c) Complications during the procedure and its management 	CO1
Unit 4	Management of cardiac arrest	
	a) Definition, b) Causes external cardiac massage, c) Artificial respiration and other drugs and procedures used in the management of Cardiac arrest	CO1, CO2
Unit 5	Myocardial perfusion scan	
	a) Procedures andb) usefullness of myocardial perfusion scanc) precautions	CO1, CO2
Unit 6	Cardiac arrhythmias	
	 a) Bradyarrhythmia and Tachy arrhythmias and ECG diagnosis of all rhythm disturbances. b) Sinus arrhythmia, APC, FPC, VPC, VF, VT, AF, SVT, c) I⁰HB, II⁰HB, complete heart block 	CO1, CO2
Unit 7	Electrolyte disturbances	
	 a) ECG in hypokelemia, b) hyperkelemia c) others etc 	CO1, CO2
Unit 8	Holter	
	monitoring a) Procedure and b) Usefulness c) precautions	CO1, CO2
Unit 9	Valvoplasties	
	a) Procedure, b) Indications,	CO2, CO3

	c) Complications and treatment of ballons, mitral valvuloplasty, ballon aortic valvuloplasty ballon pulmonary valvuloplasty and balloon tricuspid valvuloplasty.	
Unit 10	Coil closure and device closure of PDA	
	a) Procedure, b) Indications; c) Materials used for coil and device closure of PDA	CO2, CO3, CO4
Unit 11	Device closure of ASD	
	a) Procedure, b) Indications; c) Materials used for device closure of ASD	CO2, CO3, CO4
Unit-12	Device closure of VSD	
	a) Procedure,b) Indications;c) Materials used for device closure of ASD	CO2, CO3, CO
Unit-13	Electrophysiological studies	
	a) Basic knowledge of EP studies b) Mapping and c) Ablation	CO1, CO3, CO
Unit-14	Oxymetry	
	a) Handling of the instrument; b) Usefulness of the instrument, c) normal and abnormal values	CO1,CO3
Unit-15	Pressure recording	
	a) Handling of the instrument;b) Pressures in various chambers,c) normal and abnormal values	CO4, CO
Unit-16	Temporary and permanent pacing	
	a) Materials used, b) Procedure,	CO1, CO3, CO4

		c) Complications one may encounter and management. Implantable Cardioverter defibrillator devices	
	Unit-17	CD recording and storage-	
		a) Recording b) and Storage of all the procedures over CD c) other	CO5
	Unit-18	Procedure during pregnancy	
		a) Precautions to be followed. b) Safety c) other	CO3,CO4, CO5
	Unit-19	Nuclear Cardiology	
		a) Instrumentation,b) Radiopharmaceuticalsc) others	CO3, CO4, CO5
1	Course Code	BCT 303	
2	Course Title	Cardiac Care Technology-Advanced (LAB)	
3	Credit Hours	2	
4	Contact Hours (L-T-P)	0-0-4	
5	Course Outcomes	1.Graduates will be able to understand normal ECG, basic abnormalities of ECG in various disease,	
		2.Graduates will be able to understand findings of ECHO in various diseases	
		3.Graduates will be able to know equipment details, handling and radiation hazards of cardiac catheterization lab.	
		4.Graduates will be able to know materials used in cath. lab and their sterilization technique	
		5.Graduates will be able to know different aspects of coronary angiography and peripheral angiogram.

	Description	Condition of the Condit	
	Description	Cardiac monitoring	
		Interpretation of TMT	
		Use of defibrillator	
		Management of cardiac arrest	
		Myocardial perfusion scan	
		Cardiac arrhythmias	
		Electrolyte disturbances	
		Holter monitoring	
		 Valvoplasties 	
		Coil closure and device closure of PDA	
		Device closure of ASD,VSD	
		Pressure recording, pacing, pregnancy, nuclear cardiology	
	Practicals		
	Unit 1	Cardiac monitoring	
		d) Definition,	CO1
		e) Purpose of cardiac monitoring,	
		f) How to Recognise various arrhythmias How to set up a intensive coronary care unit and usefullness of	
		ICCU	
	Unit 2	Interpretation of TMT	
		d) Criteria for TMT positive test contraindication for TMT	CO1
		conditions where TMT is not useful,	
		e) Complications that may occur in TMT room and its management	
		f) Others	
	Unit 3	Use of defibrillator	
		d) Indications, e) How to use the defibrillator,	CO1
		e) How to use the defibrillator,f) Complications during the procedure and its management	
		, , , , , , , , , , , , , , , , , , , ,	
	Unit 4	Management of cardiac	
		d) Definition,	CO1 CO2
		e) Causes external cardiac massage,	CO1, CO2
		f) Artificial respiration and other drugs and procedures used in	
		the management of Cardiac arrest	
	Unit 5	Myocardial perfusion scan	
			CO1,
		d) Procedures and e) usefullness of myocardial perfusion scan	CO2
		f) precautions	
		, '	

Unit 6	Cardiac arrhythmias	
	 d) Bradyarrhythmia and Tachy arrhythmias and ECG diagnosis of all rhythm disturbances. e) Sinus arrhythmia, APC, FPC, VPC, VF, VT, AF, SVT, f) I⁰HB, II⁰HB, complete heart block 	CO1, CO2
Unit 7	Electrolyte disturbances	
	d) ECG in hypokelemia, e) hyperkelemia f) others etc	CO1, CO2
Unit 8	Holter monitoring	
	d) Procedure and e) Usefulness f) precautions	CO1, CO2
Unit 9	Valvoplasties	
	d) Procedure, e) Indications, f) Complications and treatment of ballons, mitral valvuloplasty, ballon aortic valvuloplasty ballon pulmonary valvuloplasty and balloon tricuspid valvuloplasty.	CO2, CO3
Unit 10	Coil closure and device closure of PDA	
	d) Procedure, e) Indications; f) Materials used for coil and device closure of PDA	CO2, CO3, CO4
Unit 11	Device closure of ASD	
	d) Procedure, e) Indications; f) Materials used for device closure of ASD	CO2, CO3, CO4
Unit 12	Device closure of VSD	
	d) Procedure, e) Indications; f) Materials used for device closure of ASD	CO2, CO3, CO4
Unit 13	Electrophysiological studies	

	d) Basic knowledge of EP studies	CO1,
	e) Mapping and	CO3, CO4
	f) Ablation	-,
Unit 14	Oxymetry	
	Oxymetry .	
	d) Handling of the instrument;	CO1,CO3,
	e) Usefulness of the instrument,	CO4
	f) normal and abnormal values	
Unit 15	Pressure recording	
	d) Handling of the instrument;	CO4, CO5
	e) Pressures in various chambers,	001,005
	f) normal and abnormal values	
Unit 16	Temporary and permanent pacing	
	d) Materials used,	CO1,
	e) Procedure,	CO3, CO4
	f) Complications one may encounter and management.	
	Implantable Cardioverter defibrillator devices	
Unit 17	CD recording and storage-	
	d) Recording	CO5
	e) and Storage of all the procedures over CD	003
	f) other	
	i, oanei	
TT 1: 10		
Unit 18	Procedure during pregnancy	
	d) Precautions to be followed.	CO3,CO4,
	e) Safety	CO5
	f) other	
Unit 19	Nuclear Cardiology	
	d) Instrumentation,	CO3,
	e) Radiopharmaceuticals	CO4, CO5
	f) others	
Madasf	The army and Dreatical	
Mode of examination	Theory and Practical	
Weightage	CA MTE ETE

BCT:Cardiovascular Technology Internship & Project work

School: SAHS		Batch: 2018-2022	
Pr	ogram:	Current Academic Year: 2021-22	
Bo	CVT		
Pr	oject duration	10 months	
1	Course	Internship	
	Title		
2	Duration	12 months	
3	Course	Compulsory	
	Status		
4	Course	To help the students to identify and understanding of cardiac disease	
	/Internship Objective	development	
		To train the students for routine investigation of cardiac diseases.	
		To prepare students for providing assistance to cardiologists.	
		To provide the conceptual basis for understanding of various manoeuvre	
		for diagnosis and interpretation of cardiac diseases.	
		To develop diagnostic skills in cardiovascular technology.	

5 Course /Internship Outcomes	 11. Graduates will be able to understand normal ECG, basic abnormalities of ECG in various diseases. 12. Graduates will be able to understand findings of ECHO in various diseases 13. Graduates will be able to know equipment details, handling and radiation hazards of cardiac catheterization lab. 14. Graduates will be able to know materials used in cath. lab and their sterilization technique 15. Graduates will be able to know different aspects of coronary angiography and peripheral angiogram.
6 Course /Internship Description	 Electrocardiography (ECG) Cardiac monitoring Interpretation of TMT Echocardiogram Use of defibrillator Management of cardiac arrest Myocardial perfusion scan Cardiac arrhythmias Electrolyte disturbances Holter monitoring Assessment of cardiac function Cardiac catheterization and coronary angiogram/angioplasty Valvoplasties Coil closure and device closure of PDA Device closure of ASD,VSD Pressure recording, pacing, Procedure during pregnancy, nuclear cardiology

1. The students will be posted to the following departments/section of the cardiology unit of a hospital in a span of 12 months.

S. No.	Department/Section
1.	Electrocardiography
2.	TMT & Holter monitor
3.	ЕСНО
4.	Cath Lab
5.	Cardiac OT

6. ICU/CCU/Recovery Room

Guidelines for Project work

1. During internship and project work, students will have to maintain a file.

In the file, collected data & diagnostic procedure (or surgery) of patients should be recorded.

2. Project Work

On the given topic, student will collect the data of patients (as many as possible) and submit the project report before Viva Voce.

The project work will be taken up by a student on an area identified is the process of internship. The assessment of the course will be done based on the following criteria:

- i. Attendances
- ii. Case Study
- iii. Report
- iv. Presentation

The report should base the following points:

- i. Causes
- ii. Risk Factors
- iii. Prevalence
- iv. Post Treatment Effects on Patients
- v. Precautions Or Suggestions for Patients
- vi. Conclusive Remarks (by Presenter)

Note - During the internship period, student must attend all mentioned departments for the given time period.

Clinical Training and internship: Every student who has passed in all the theory and practical examinations of all the three years will have to undergo 1 year compulsory clinical training in at-least 100 bedded hospital as rotatory inter departmental internship as per schedule finalized by the School of Allied Health Sciences authorities. No candidate shall be permitted to proceed to the internship of the course of study i.e. clinical training in hospital, unless he/she has passed in all the written theory and practical examinations conducted during the preceding three years of the course of study. Every student should attend his/her training in the associated training hospital as per the timings of those centers. The candidate shall maintain a log book forall the events of the respective posting. Logbook completed by the student in that training

Centre will have to be countersigned by the Faculty or In-charge of that Centre. The Regular participation of students in seminars / case presentations is mandatory and aimed to encourage them in learning research and development programs in Cardiovascular Technology. On completion of the training, the log book submitted by each candidate will be evaluated by authorities and declared to be 'Satisfactory' or 'Not Satisfactory'.
