2019 ADMISSION BATCH

1.1Vision, Mission and Core Values of the University

Vision of the University

To serve the society by being a global University of higher learning in pursuit of academic excellence, innovation and nurturing entrepreneurship.

Mission of the University

- Transformative educational experience.
- Enrichment by educational initiatives that encourage global outlook.
- Develop research, support disruptive innovations and accelerate entrepreneurship. Seeking beyond boundaries**.**

Core Values

- Integrity
- Leadership
- Diversity
- Community

1.2 Vision and Mission of the SET

Vision of the SET

To become a globally acclaimed institution of higher learning in engineering and technology promoting excellence in research, innovation and entrepreneurship

Mission of the SET

M1: To impart quality education with strong industry & academic connectivity in the expanding fields of Engineering and Technology in a conductive and enriching learning environment.

M2: To product technocrats equipped with technical & soft skills and experiential learning required to stay current with the modern tools in emerging technologies to fulfill professional responsibilities and uphold ethical values.

M3: To inculcate a culture of interdisciplinary research, innovation and entrepreneurship to provide sustainable solutions to meet the growing challenges and societal needs.

M4: To foster collaborative learning and to play adaptive leadership role in professional career and pursuit of higher education through effective mentoring and counselling.

1.2 Vision and Mission of the Department

Vision of the Department

To be known and recognized as the fountainhead of excellence in technical knowledge and research in computer science and engineering, and draw to it the students and scholars across nations.

Mission of the Department

M1: To facilitate and foster the academia industry collaboration to enhance entrepreneurship skills and acquaintance with corporate culture.

M2: To strengthen core competences of students to be successful, ethical, effective problem solver in Computer Science & Engineering through analytical learning

M3: To promote research based activities in emerging areas of technology convergence.

M4: To induce moral values and spirit of social commitment.

1.3 Programme Educational Objectives (PEO)

1.3.1 Writing Programme Educational Objectives (PEO)

The Educational Objectives of UG Program in Computer Science Engineering are:

PEO1: The Graduate will ensconce himself/herself as effective professionals by solving real life problems using exploratory and analytical skills along with the knowledge acquired in the field of Computer Science and Engineering.

PEO2: The Graduate will demonstrate his/her ability to accustom to rapidly changing environment in advanced areas of Computer Science and scale new height in their profession through lifelong learning.

PEO3: The Graduate will have the ability to work and communicate effectively as a team member or leader to complete the task with minimal resources, meeting deadlines.

PEO4: The Graduate will embrace professional code of ethics in the profession while deliberately being part of projects which contributes to the society at large without disturbing the ecological balance.

Methods of Forming PEO's

STEP 1: The needs of the Nation and society are identified through scientific publications, industry interaction and media.

STEP 2: Taking the above into consideration, the PEOs are established by the coordination Committee of the department.

STEP 3: The PEOs are communicated to the alumni and their suggestions are obtained.

STEP 4: The PEOs are communicated to all the faculty members of the department and their feedback is obtained.

STEP 5: The PEOs are then put to the Board of Studies of the department for final approval.

[Note: Prepare a file for the same, how you arrive for PEO's]

1.3.3 Program Outcomes (PO's)

PO1: Communication-Students will be able to communicate in written and oral forms in such a way as to demonstrate their ability to present information clearly, logically, and critically.

PO2: Mathematics and Theory-Students will be able to apply mathematical and computing theoretical concepts in solution of common computing applications, such as computing the order of an algorithm.

PO3: Programming-Students will be able to complete successfully be able to program small-to-mid-size programs on their own. Sufficient programming skills will require use of good practice, e.g., good variable names, good use of computational units, appropriate commenting strategies.

PO4: Systems Design and Engineering-Students will be able to use appropriately system design notations and apply system design engineering process in order to design, plan, and implement software systems

PO5: Depth of Knowledge-In a self-selected area of depth in Computing, students will demonstrate a depth of knowledge appropriate to graduate study and/or lifelong learning in that area. Students should be able to read for understanding materials in that area beyond those assigned in coursework.

PO6: Preparation for Career-Students will be prepared for a career in an information technology-oriented business or industry, or for graduate study in computer science or other scientific or technical fields.

PSO1: Effectively communicating computing concepts and solutions to bridge the gap between computing industry experts and business leaders to create and initiate innovation

PSO2: Effectively utilizing their knowledge of computing principles and mathematical theory to develop sustainable solutions to current and future computing problems.

PSO3: Exhibiting their computing expertise within the computing community through corporate leadership, entrepreneurship, and/or advanced graduate study

PSO4: Developing and implementing solution based systems and/or processes that address issues and/or improve existing systems within in a computing based industry.

Basics of Digital Electronics

School: SET		**Batch : 2019**	
Program: BSc		**Current Academic Year: 2019-20**	
Branch: CS/IT		**Semester: I**	
1	Course Code	BCO102 | Course Name: Basics of Digital Electronics	
2	Course Title	Basics of Digital Electronics	
3	Credits	4	
4	Contact Hours (L-T-P)	3-1-0	
	Course Status		
5	Course Objective	To provide students with an overview of digital electronics that forms the basic foundation of digital computer. It includes the number system, binary logic circuit and k-maps, evaluating circuit designs within the context of digital and combinational circuits.	
6	Course Outcomes	After the successful completion of the course, the student will: 1. Understand the basic concepts of digital electronics and number system. Convert numbers between decimal, binary, octal, and hexadecimal number systems. 2. Define the basic logic operations; AND, OR, NAND, NOR, INVERTER and flip-flop circuits. Predict the output response as either an expression or truth-table. 3. To evaluate and simplify using Boolean algebra and/or Karnaugh mapping techniques, sum of products (SOP) and product of sums (POS) that helps in simplifying the derivation of the function to be implemented. 4. Identify combinatorial logic circuits and sequential logic circuits, and explain their operation.	
7	Course Description	This course covers the core concepts of digital electronics that include AND, OR, NAND, NOR, NOT logic functions and integrated circuits, combinational and sequential logic circuits. The course also provides a study of Boolean algebra, binary and hexadecimal number systems, binary codes, and the analysis of the basic components and circuits used in semiconductor switching.

1	Course Code	**ARP101**
2	Course Title	Communicative English-1
3	Credits	2
4	Contact Hours (L-T-P)	1-0-2
5	Course Objective	To minimize the linguistic barriers that emerge in varied socio-linguistic environments through the use of English. Help students to understand different accents and standardise their existing English. Guide the students to hone the basic communication skills - listening, speaking, reading and writing while also uplifting their perception of themselves, giving them self-confidence and building positive attitude.
6	Course Outcomes	CO1 Learn to use correct sentence structure and punctuation as well as different parts of speech. CO2 Learning new words its application and usage in different contexts helpful in building meaning conversations and written drafts. Develop over all comprehension ability, interpret it and describe it in writing. Very useful in real life situations and scenarios. CO2 A recognition of one's self and abilities through language learning and personality development training leading up to greater employability chances. Learn to express oneself through writing while also developing positive perception of self. To be able to speak confidently in English CO3 To empower them to capitalise on strengths, overcome weaknesses, exploit opportunities, and counter threats. To ingrain the spirit of Positive attitude in students through a full length feature film followed by a storyboarding activity. Create a Self Brand, identity and self esteem through various interesting and engaging classroom activity CO4 Exposing students to simulataions and situations wherein students learn to describe people and situations and handle such situations effectively and with ease. Teaching students how to engage in meaningful dialogues and active conversational abilities to navigate through challenging situations in life and make effective conversations. CO12 Learn how to transform adverse beginnings into positive endings – through writing activities like story completion.
7	Course Description	The course is designed to equip students, who are at a very basic level of language comprehension, to communicate and work with ease in varied workplace environment. The course begins with basic grammar structure and pronunciation patterns, leading up to apprehension of oneself through written and verbal expression as a first step towards greater employability.

2	Course Title	**System Analysis and Design**	
3	Credits	3	
4	Contact Hours (L-T-P)	3-0-0	
	Course Status	Compulsory	
5	Course Objective	1. Systems Analysis is a central part of systems development. 2. It comprises the process of turning a set of user requirements into a logical system specification and encompasses various activities to achieve this end. 3. The traditional systems lifecycle has been challenged by alternative models, for example the spiral (iterative and incremental) lifecycle and rapid application development.	
6	Course Outcomes	Students will be able to: **CO1:** To understand the role of systems analysis within various systems development life cycles. **CO2:** To develop an awareness of the different approaches that may be taken to systems analysis. **CO3:** To understand the systems analyst's activities, and apply current tools and techniques. **CO4:** Describe different life cycle models and explain the contribution of systems analysis within them.	
7	Course Description	This course introduces the concepts of distributed operating system, algorithms and design issues and challenges in Distributed system, identify the problems, and choose the relevant models and algorithms to apply.

5	Course Objective	1. Learn the systematic way of solving problems, various methods of organizing large amounts of data. 2. Be familiar with writing recursive methods. 3. Solve problems using data structures such as linear lists, stacks, queues, linked list binary trees, heaps binary search trees, and graphs and writing programs for these solutions. 4. Efficiently implement the different data structures and solutions for specific problems. 5. Choose the appropriate data structure and algorithm design method for a specified application.	
6	Course Outcomes	CO1: Understand the concepts of data structure, data type and ADT. CO2: Handle operations like traversing, insertion, deletion, searching etc. on various data structures. CO3:Implement and know when to apply standard algorithms for searching and sorting. CO4: Implement linked list data structure to solve various problems. CO5: Understand and apply various data structure such as stacks, queues, trees and graphs to solve various computing problems using C-programming language. CO6: Choose the data structure that efficiently model the information in a problem	
7	Course Description	This course starts with an introduction to data structures with its classification, array and pointer based implementations. As the course progresses the study of Linear and Non-Linear data structures are studied. The course talks primarily about Linked list, stacks, queue, Tree structure, Graphs etc. This Course also deals with the concept of searching, sorting and hashing methods.

	Course Status	Compulsory	
5	Course Objective	1. Learn the systematic way of solving problems, various methods of organizing large amounts of data. 2. Be familiar with writing recursive methods. 3. Solve problems using data structures such as linear lists, stacks, queues, linked list binary trees, heaps binary search trees, and graphs and writing programs for these solutions. 4. Efficiently implement the different data structures and solutions for specific problems. 5. Choose the appropriate data structure and algorithm design method for a specified application.	
6	Course Outcomes	CO1: Understand the concepts of data structure, data type and ADT. CO2: Handle operations like traversing, insertion, deletion, searching etc. on various data structures. CO3: Implement and know when to apply standard algorithms for searching and sorting. CO4: Implement linked list data structure to solve various problems. CO5: Understand and apply various data structure such as stacks, queues, trees and graphs to solve various computing problems using C-programming language. CO6: Choose the data structure that efficiently model the information in a problem	
7	Course Description	This course starts with an introduction to data structures with its classification, array and pointer based implementations. As the course progresses the study of Linear and Non-Linear data structures are studied. The course talks primarily about Linked list, stacks, queue, Tree structure, Graphs etc. This Course also deals with the concept of searching, sorting and hashing methods.

5	Course Objective	Introduces the UNIX/Linux operating system, including: task scheduling and management, memory management, input/output processing, internal and external commands, shell configuration, and shell customization. Explores the use of operating system utilities such as text editors, electronic mail, file management, scripting, and C/C++ compilers	
6	Course Outcomes	On completion of this course the student should be able to: 1. To Identify and use UNIX/Linux utilities to create and manage simple file processing operations, organize directory structures with appropriate security, and develop shell scripts to perform more complex tasks. 2. To accomplish typical personal, office, technical, and software development tasks. 3. To Analyze system performance and network activities. Effectively use software development tools including libraries, preprocessors, compilers, linkers, and make files. 4. Comprehend technical documentation, prepare simple readable user documentation and adhere to style guidelines.

Introduction to OOP using Java

School: SET		**Batch : 2019**	
Program: B.Sc.		**Current Academic Year: 2019-20**	
Branch: CS/IT		**Semester: V**	
1	Course Code	**BCO301** Course Name	
2	Course Title	Introduction to OOP using Java	
3	Credits	4	
4	Contact Hours (L-T-P)	3-1-0	
	Course Status	UG	
5	Course Objective	Its main objective is to teach the basic concepts and techniques which form the object oriented programming paradigm	
6	Course Outcomes	Students will be able to: CO1: Understand fundamentals of programming such as variables, conditional and iterative execution, methods, etc. CO2: Understand fundamentals of object-oriented programming in Java, including defining classes, invoking methods, using class libraries, etc. CO3: Have the ability to write a computer program to solve specified problems. CO4: Be able to use the Java SDK environment to create, debug and run simple Java programs.	
7	Course Description	Basic Object Oriented Programming (OOP) concepts, including objects, classes, methods, parameter passing, information hiding, inheritance and polymorphism are introduced and their implementations using Java are discussed.	
8	Outline syllabus		CO Mapping
	Unit 1	**Introduction to Object Oriented Paradigm**

5	Course Objective	This course is designed to provide a comprehensive introduction to computer graphics leading to the ability to understand contemporary terminology, progress,issues, and trends. A thorough introduction to computer graphics techniques, focusing on 3D modeling, image synthesis, and rendering. Topics cover: geometric transformations, geometric algorithms, 3D object models (surface, volume and implicit), visible surface algorithms, image synthesis and anti-aliasing. The interdisciplinary nature of computer graphics is emphasized in the wide variety of examples and applications.	
6	Course Outcomes	Students will be able to: **CO1:** Understand the technology requirement for graphics system. **CO2:** Construct various object to create various application. **CO3:** Formulate proficiency in 2D and 3D computer graphics API programming. **CO4:** Differentiate between 2D and 3D display schemes. **CO5**: Discuss various animation methodology. **CO6**: Compare various animation techniques to formulate various models.	
7	Course Description	Computer Graphics I is a study of the hardware and software principles of interactive raster graphics. Topics include an introduction to the basic concepts, 2-D and 3-D modeling and transformations, viewing transformations, projections, rendering techniques, graphical software packages and graphics systems. Students will use a standard computer graphics API to reinforce concepts and study fundamental computer graphics algorithms.

Enterprise Resource Planning

School: SET		**Batch : 2019**
Program: B.Sc.		**Current Academic Year: 2019-2022**
Branch:CS/IT		**Semester: VI**
1	Course Code	BCO310 | Course Name: **Enterprise Resource Planning**
2	Course Title	**Enterprise Resource Planning (ERP)**
3	Credits	3
4	Contact Hours (L-T-P)	3-0-0
	Course Status	Departmental Elective
5	Course Objective	**Students will try to learn:** 1. With the basic concepts of ERP systems for manufacturing or service companies, and the differences among (Material Requirement Planning) MRP, MRP II, and ERP systems; 2. Apply the principles of ERP systems, their major components, and the relationships among these components; 3. With the knowledge of typical ERP systems, and the advantages and limitations of implementing ERP systems. 4. To comprehend the technical aspects of ERP systems 5. To be able to map business processes using ERP concepts and techniques.
6	Course Outcomes	After Successful completion of this course the student will be able to: CO1: Classify different processes of the organization and relationship among all processes . CO2: Examine systematically the planning mechanisms in an enterprise, and identify all components in an ERP system and the relationships among the components; CO3: To describe the Generic Model of ERP and General ERP Implementation Methodology.

		CO4: To apply the concepts of BPR, SCM and CRM. CO5: To demonstrate knowledge of SAP and Oracle Apps.	
7	Course Description	This course will explore the concepts, principles, and state-of-the-art methods in successfully integrating Enterprise Resource Planning (ERP) systems into extant enterprise architectures. The course will help both functional area and IT managers understand the respective role of users, enterprise architects, developers and managers in the selection, preparation, implementation and management of large and complex enterprise applications.	
8	Outline syllabus		CO Mapping
	Unit 1	**Introduction to Enterprise Resource Planning**	
	A	Introduction of the term Business Process Reengineering(BPR) ,BPR Methodology, Current BPR Tools	CO1, CO2
	B	Introduction to material requirement planning (MRP), Definition of Enterprise Resource Planning (ERP); Evolution of ERP; Characteristics, Features	CO1, CO2
	C	Components and needs of ERP; ERP Vendors; Benefits & Limitations of ERP Packages	CO1, CO2
	Unit 2	**Enterprise Modeling and Integration of ERP**	
	A	Need to focus on Enterprise Integration/ERP; Information mapping	CO1, CO2
	B	Role of common shared Enterprise database; System Integration, Logical vs. Physical System Integration	CO1, CO2
	C	Benefits & limitations of System Integration, ERP's Role in Logical and Physical Integration	CO1, CO2,
	Unit 3	**ERP Architecture and Implementation Methodology of ERP**	
	A	Generic Model of ERP system; Core Modules functionality; Types of ERP architecture	CO1, CO3
	B	Difficulty in selecting ERP, Approach to ERP selection, Request for Proposal approach	CO1, CO3, CO4
	C	Evaluation Criteria of ERP packages; Project Implementation Team Structure	CO1, CO3, CO4
	Unit 4	**Introduction to SAP , Oracle APPS**	
	A	SAP, Integrated SAP Model, SAP Architecture	CO1,CO5
	B	Oracle Apps, Oracle AIM Methodology	CO1,CO5
	C	A Comparative assessment of ERP Packages	CO1,CO5
	Unit 5	**Supply Chain Management and Customer Relationship Management**	
	A	Definition of Supply Chain Management (SCM); Aims of SCM; Benefits of SCM; ERP Vs SCM	CO1,CO2,CO3, CO4,CO5

	B	Definition of Customer Relationship Management (CRM); CRM Evolution; CRM Component			CO1,CO2,CO3, CO4,CO5

	A	What is ecosystem? Structure and function of ecosystem	CO2

	B	Energy flow in an ecosystem; food chain, food web and ecological succession	
	C	Case study of following ecosystem: forest, grassland, desert, aquatic (pond, stream, lake, river, ocean, estuaries)	
	Unit 3	**Natural Resources: Renewable and non-Renewable resources**	**08**
	A	Land use resources, land degradation, soil erosion; Deforestation (causes and impacts, effects on biodiversity and tribal population	
	B	Water: use and overexploitation surface and ground water, flood, droughts, conflicts over water (international & inter state)	CO3
	C	Heating of earth and circulation of air, air mass formation & precipitation; Energy resources: Renewable, nonrenewable, alternate energy source.	
	Unit 4	**Biodiversity and Conservation**	**09**
	A	Levels of biological diversity: genetic, species and ecosystem diversity.	
	B	Threats to biodiversity; Conservation of biodiversity; natural reserves, wild life conflict.; Disaster management (flood, earthquake, cyclone &landslide)	CO4
	C	Ecosystem and biodiversity services: ecological, economic, social, ethical, aesthetic and informational value. Environmental movements (Chipko, Silent valley, Bishnions of Rajasthan.)	
	Unit 5	**Environmental pollution**	**09**
	A	Environmental pollution: Types, causes, effects and control (air, water, soil, chemical & noise) carbon footprint	CO5
	B	Solid waste management; Environment laws: EPA, Air (pollution control) act, water (pollution control) act, Kyoto protocol, Montreal Protocol, CBD

MSM 101: FUNDATION COURSE IN MATHEMATICS

Unit 1 – **Matrices:** Matrices, determinants, its properties, type of matrices, simple algebraic operations, transpose and adjoint of a matrix, inverse of a matrix, elementary row operations, characterstic polynomial, Caley-Hamilton theorem and its applications. System of linear equations its consistency and solution.

Unit 2 – **Complex numbers:** Representation of complex numbers in Argand's plane, modulas and argument of complex numbers, algebraic operations, Demoivre's theorem, nth root of a complex number, Euler's formula.

Unit 3 – **Co-ordinate geometry:** Cartesian coordinate system, distance between points, section formula, equation in a line in various forms, slope of a line, equations of parallel, perpendicular line, equation of a circle in various forms, equation of tangent and normal at a point on the circle, standard equations of ellipse, parabola and hyperbola.

Unit 4 – **Set theory:** Definition of a set, types of sets, union and intersection of sets, difference between sets, simple problems based on venn-diagrams, DeMorgan's Laws, relations and functions, domain, codomain and range of a function, composite function and inverse of a function.

Unit 5 – **Vector Algebra:** Addition and subtraction of vectors and their geometric applications, Scalar and vector product of two vectors, their geometric interpretation, physical applications and their properties, projection of a vector on another vector, area of triangle, parallelogram and quadrilateral, triple product of vectors and applications.
