Program and Course Structure

Department of Electrical Electronics and Communication Engineering

B.Tech. Electrical and Electronics Engineering SET0404

2020

1. Standard Structure of the Program at University Level

1.1 Vision, Mission and Core Values of the University

Vision of the University

To serve the society by being a global University of higher learning in pursuit of academic excellence, innovation and nurturing entrepreneurship.

Mission of the University

- 1. Transformative educational experience
- 2. Enrichment by educational initiatives that encourage global outlook
- 3. Develop research, support disruptive innovations and accelerate entrepreneurship

Core Values

4. Seeking beyond boundaries

- Integrity
- Leadership
- Diversity
- Community

1.2 Vision and Mission of the School

Vision of the School

To become a globally acclaimed institution of higher learning in engineering and technology promoting excellence in research, innovation and entrepreneurship

Mission of the School

- 1. To impart quality education with strong industry & academic connectivity in the expanding fields of Engineering and Technology in a conductive and enriching learning environment.
- 2. To product technocrats equipped with technical & soft skills and experiential learning required to stay current with the modern tools in emerging technologies to fulfill professional responsibilities and uphold ethical values.
- 3. To inculcate a culture of interdisciplinary research, innovation and entrepreneurship to provide sustainable solutions to meet the growing challenges and societal needs.
- 4. To foster collaborative learning and to play adaptive leadership role in professional career and pursuit of higher education through effective mentoring and counseling.

1.2.1 Vision and Mission of the Department

Vision of the Department of Electrical and Electronics Engineering

To become an internationally acclaimed destination of academic excellence in the discipline of Electrical, Electronics, and Communication Engineering by promoting research, innovation, and entrepreneurship to serve society.

Mission of the Department Electrical and Electronics Engineering

M1-To provide comprehensive technical knowledge in Electrical, Electronics and Communication Engineering.

M2- To facilitate and foster the industry-academia collaboration to enhance technical skills and employability.

M3- To promote interdisciplinary and multi-disciplinary research, innovations and entrepreneurship to serve society.

M4- To develop core values, professional ethics and lifelong learning skills through interactive support systems.

1.3 Programme Educational Objectives (PEO)

1.3.1 Writing Programme Educational Objectives (PEO)

The Educational Objectives of UG Program in Electrical and Electronics Engineering are:

PEO1: The graduates will achieve a reputation as a source of providing innovative solutions for complex engineering problems.

PEO2: The graduates will demonstrate sound engineering knowledge and managerial decisions based on ethical and professional standards.

PEO3: The graduates will work on global technological and environmental issues as a successful entrepreneur.

PEO4: The graduates will pursue higher studies to become successful academicians and lead researchers.

1.3.2 Map PEOs with School Mission Statements:

No.	PEO statement	School missions			
		Mission statement	Mission statement	Mission	Mission
		1	2	statement 3	statement 4
1	The graduates will	3	2	2	3
	achieve a reputation				
	as a source of				
	providing innovative				
	solutions for complex				
	engineering problems.				
2	PEO2: The graduates	2	3	3	2
	will demonstrate				
	sound engineering				
	knowledge and				
	managerial decisions				
	based on ethical and				
	professional				
	standards.				
3	PEO3: The graduates	2	3	2	3
	will work on global				
	technological and				
	environmental issues				
	as a successful				
	entrepreneur.				
4	PEO4: The graduates	2	3	2	2
	will pursue higher				
	studies to become				
	successful				
	academicians and lead				
	researchers.				

1.3.2.1 Map PEOs with Department Mission Statements:

PEOs MISSION STATEMENTS	PEO1: The graduates will achieve a reputation as a source of providing innovative solutions for complex engineering problems.	PEO2: The graduates will demonstrate sound engineering knowledge and managerial decisions based on ethical and professional standards.	PEO3: The graduates will work on global technological and environmental issues as a successful entrepreneur.	PEO4: The graduates will pursue higher studies to become successful academicians and lead researchers.

M2- To facilitate and foster the industry-academia collaboration to enhance technical skills and employability.	3	3	3	3	12/12
M3- To promote interdisciplinary and multi- disciplinary research, innovations, and entrepreneurship to serve society.	3	2	3	3	11/12
M4-To develop core values, professional ethics, and lifelong learning skills through interactive support systems	2	3	2	3	10/12
	11/12	11/12	11/12	12/12	93.75%

1. Slight (Low)2. Moderate (Medium)3. Substantial (High)1.3.3 Program Outcomes (PO's)

- PO1: **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2: **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3: **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4: **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5: **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
- PO6: **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7: **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8: **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9: **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10: **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

- PO11: **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12: Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

1.3.4 Program Specific Outcomes (PSO's)

PSO 1: An ability to apply hardware and software based embedded smart solutions for industrial automation and power system

PSO 2: Accentuate the application of cutting-edge technology on renewable energy systems and smart grid

PSO 3: To utilize the knowledge of power systems, automation, robotics and sustainable technology in multidisciplinary research

ENGINEERING CHEMISTRY (CHY 111) (TERM I/II)

Sch	ool: SET	
Pro	gram: B.Tech.	
Bra	nch:	Semester:2
CS/	EC/IT/EEE	
1	Course Code	CHY 111
2	Course Title	Chemistry for engineers
3	Credits	4
4	Contact Hours	3-1-0
	(L-T-P)	
	Course Status	Compulsory
5	Course	1. Make it comprehended the importance of clean water.
	Objective	 Describe to the basic concepts of spectroscopy as described in the module content and is to teach getting of valuable information from the same to apply in various engineering applications. To provide an introduction to the basic concepts in Electrochemistry and apply them to understand batteries and corrosion. To equip the students with the knowledge of modern technologies i.e. nanotechnology and its various engineering applications.
6	Course Outcomes	 Students will be able to understand : Realize the importance of clean and healthy water by giving knowledge about water quality parameters and cleaning measures. In sighting the structural features of material by having the knowledge of spectroscopic techniques. State the main cause of corrosion and prevention measures. Name the components of galvanic cell and applies these to the understand the batteries and corrosion of a metal.

			HARDA
		4. Able to apply the basic information of eng materials and their applications.	gineering
		 Able to have a basic knowledge of technology in days i.e. Nanotechnology and its various applicat 	
		 Have a thorough grounding in chemistry and a worknowledge of advanced chemistry. 	king
7	Course Description	The course includes the fundamentals of The Electrochemistry and batteries, corrosion, in Chemistry of Materials, water technology and na This course satisfies the requirements of the program.	troduction to notechnology.
8	Outline syllabu	CO Mapping	
	Unit 1	Water: Analysis and its treatment	
	A	Water and water treatment: Drinking water standards, Water quality parameters and their measurement: pH (alkalinity and acidity –determination by titrimetry), Turbidity, Dissolved Oxygen (DO), biological oxygen demand (BOD), chemical oxygen demand (COD), chloride, fluoride, oil and fats,	CO1
	В	hardness (definition and expression, estimation of hardness (EDTA method), nutrients (N, P, etc.), nitrate, dissolved metals.	CO1
	С	Municipal water treatment process - screening, sedimentation, flocculation;Coagulation, Filtration (Slow sand and rapid sand), disinfaction-chlorination.	CO1
	Unit 2	Spectroscopic studies of materials	
	A	Principles of spectroscopy and selection rules. Electronic spectroscopy: basic principle, 'Lamberts Beer's law,	CO2
	В	chromophore, effect of conjugation on chromophore and applications, Fluorescence and its applications in medicine.	CO2
	С	Basic principle and applications of Nuclear magnetic	CO2

	resonance and magnetic resonance imaging spectroscopy.	evond Boundari
Unit 3	Electrochemistry, energy storage devices and corrosion	
A	Electrochemistry: Redox reactions, Nernst Equation, relation of e.m.f. with thermodynamic functions (Δ H, Δ F and Δ S). Electrochemical cells-	CO3
В	Galvanic cells and Concentration cell, electrode potentials and its relevance to oxidation and reduction, measurement of EMF under standard conditions, determination of pH using Hydrogen electrode,	CO3
С	primary battery: dry cells, secondary battery: Lead acid accumulator and Li Ion, fuel cells: H 2- O 2 .Corrosion: Types of corrosion, mechanism of Electrochemical corrosion, galvanic corrosion and protection against electrochemicalcorrosion.	CO3, CO6
Unit 4	Chemistry of materials	
A	:Structure, properties and application of carbon materials such as diamond, graphite, fullerenes, graphene. Liquid crystals: classification, Molecular ordering, identification, polymeric liquid crystals, and application of liquid crystals: displays and thermography.	CO4
В	Organic and inorganic semiconductors.Basic concepts of Conducting polymer, types,p-doping, n-doping, comparison with metallic conductors, examples and applications.	CO4
С	Biodegradable polymers: Basic information with common examplesPolyglycolic acid (PGA), Polyhydroxy butyrate (PHB), Polyhydroxybutyrates-co-beta hydroxyl valerate(PHBV), Polycaprolactone(pcl).	CO4, CO6
Unit 5	Nano science and technology	
A	Introduction to nanoscience and technology, bio- nanoinformation,	CO5, CO6

				SHARDA				
В	lithograp CNT's	hy, soft lithograpl	ny, Dip pen nanolithography,	CO5, CO6				
С		Application of nanotechnology in microelectronics and in memory devices.

1	Course Code	ECP 120
2	Course Title	Mechanical Workshop
3	Credits	1.5
4	Contact Hours (L-T-P)	0-0-3
	Course Status	Compulsory
5	Course Objective	The objective of this course is to make the students, familiar with the modern day manufacturing processes, introduce them to various hand tools and equipment, acclimatize with the measuring devices, and perform basic machine tool operations in various machine tools.
6	Course Outcomes	On successful completion of this course, students will be able to CO1: Apply 5S (Seiri,Seiton, Seiso,Seiketsu and Shitsuke) methodology at workplace. CO2: Select the various hand tools used in the basic mechanical engineering workshop sections-smithy, carpentry, assembling, welding etc. CO3: Choose different measuring devices according to the job CO4: Differentiate between various machine tools and their operation CO5: Classify and select suitable tools for machining processes including turning, facing, thread cutting and tapping, milling, drilling and shaping. CO6: Apply the knowledge for advanced manufacturing experiments.
7	Course Description	 Black Smithy Shop: Simple exercises based on black smithy operations such as upsetting, practice of S -Hook from circular bar using hand forging operations. Carpentry Shop : Study of different types of wood , Carpentry Tools, Equipment and different joints, Practice of T joint, cross lap joint, Mortise and Tenon T joint, Bridle T joint Fitting Shop: Preparation of Square joint, V joint, half round joint, dovetail jointas per the given specifications, which contains: Sawing, Filing, Grinding, and Practice marking operations. Sheet Metal Shop: Study of galvanized Iron (G.I.) Sheet material properties, hand tools and sheet metal machines, and projective geometry, demonstration of different sheet metal operations and practice of development of Tray, cylinder, hopper, funnel etc. Welding Shop: Introduction, Study of Tools and welding Equipment (Gas and Arc welding), Selection of welding electrode and current, Bead practice and Practice of Butt Joint, Lap Joint.

1	Course Code	EEP225							
2	Course Title	Electrical & Electronics Measurements Lab							
3	Credits	1							
4	Contact Hours	0-0-2							
	(L-T-P)								
	Course Status	Compulsory/Elective							
5	Course Objective	 To know calibration and diagnosing problem instruments To measure and read unknown electrical compone meters and bridges To measure electrical parameters like voltage, free CROs 	nts value using						
		 To know characteristics of sensors and transducers 							
		 To know constructions of analog and digital insturn 	nents						
6	Course	CO1: Getting knowledge of basic instrument and measurer							
0	Outcomes	CO2: Applying knowledge and concept on construction of electrical meters CO3: Analyzing concepts of RLC measurements CO4: Able to select proper sensors to sense a parameter CO5: Understanding knowledge of construction of CRO w other special instruments	different						
		CO6: Finding applications of instruments							
7	Course Description	This course gives idea about how to use different types of r measurements. Some experiments give practice of RLC me using AC & DC bridges. One section gives practice of mea using CRO. The last two sections about sensors and case st	easurement surement						
8	Outline syllabus		CO Mapping						
	Unit 1	Calibration							
	А	Calibration of voltmeter and ammeter	CO1,CO6						
	В	Measurement of RMS, average and form factor using rectifier and meters	CO1						
	С	Calibration of wattmeter and energy meter	CO1						
	Unit 2	RLC Bridges							
	A	DC Bridge for R measurement	CO2,CO6						
	B	AC Bridge for L measurement	CO2						
	C	AC Bridge for C measurement	CO2						
	Unit 3	CRO and DSO							
	A	Identifying of controls and functions switches on CRO & DSO	CO3,CO6						
	В	Measurements using CRO	CO3						
	Ē	Measurements using DSO	CO3						
	SETTER Tech./EEE	Sensors Characteristics	+

5	Course Objective	• To introduce the concept of demand-side management for residential, commercial and industrial energy users.
		 To give an overview of the different types of demand-side measures. To describe energy auditing and routine data collection and monitoring, andto indicate their benefits.
		 To outline information dissemination on demand-side management. To provide an overview of the major implementation challenges for DSM programmes
6	Course Outcomes	 CO1 : To be able to define demand-side management. CO2: To understand the different types of demand-side management measures and their suitability to various energy users. CO3: To be aware of the benefits of good reliable data collection for regular performance analysis, and as an essential part of energy auditing CO4: To appreciate the need for effective information dissemination. CO5: To understand the challenges facing the implementation of demand-side management CO 6: To be able to design housekeeping and preventative maintenance in commerce and industry can be used to reduce energy demand.
7	Course Description	Demand-side management (DSM) has been traditionally seen as a means of reducing peak electricity demand so that utilities can delay building further capacity. In fact, by reducing the overall load on an electricity network, DSM has various beneficial effects, including mitigating electrical system emergencies, reducing the number of blackouts and increasing system reliability. Possible benefits can also include reducing dependency on expensive imports of fuel, reducing energy prices, and reducing harmful emissions to the environment. Finally, DSM has a major role to play in deferring high investments in generation, transmission and distribution networks. Thus DSM applied to electricity

1	Course Code	
<mark>2</mark>	Course Title	Digital Relaying for Power Systems
<mark>3</mark>	Credits	<mark>3</mark>
<mark>4</mark>	Contact	3-0-0
	Hours	
	<mark>(L-T-P)</mark>	
	Course Status	Compulsory
<mark>5</mark>	Course	1. to understand the concept of digital protection and computer relaying forpower
	Objective	system.
		2. to acquire an in-depth knowledge on different generations of protectiverelays
		3. to identify different components of a numerical relay
		4. to apply discrete Fourier transform technique in Power System
		Protection
		5. to design and develop relay algorithms for protection of power system
		apparatus
<mark>6</mark>	Course	CO1: to compare, analyse the advantages and disadvantages of all the three
	Outcomes	generations of protective relay and also identify the different components of a
		numerical relay
		CO2: to develop relay algorithms based on relaying signals
		CO3: to develop algorithm for digital protection of generator
		CO4: to develop algorithm for digital protection of transformer
		CO5: to apply ANN for protection of transmission line and power
		transformer
		CO6: to design and evaluate protection algorithms for protection of anypower
_		system component
<mark>7</mark>	Course	The first and foremost driving force for advances in relaying systems is the need
	Description	improve reliability. In turn, this implies increase in dependability as well a
		security. This need to improve reliability propelled the development of digit
		relaying. In this course, the students will have an exposure to the three generation
		of protective relays.
		Throughout the course, students will have an opportunity to be exposed to
		different numerical techniques for protection of generators, transformers and
		transmission lines.
<mark>8</mark>	Outline syllabus	CO Mapping
<mark>v</mark>	Unit 1	Introduction and Architecture of Digital Relay
		indoduction and Architecture of Digital Actay

B	architecture and elements of a digital relay	CO1
C	Multifunctional relays, management relays and IED Relays	CO1
Unit 2	Relay Algorithms and Mathematical Basis	
A	Relay Algorithms based on pure sinusoidal relaying	CO2 & CO6
	signals, distorted relaying signals and differential equation	
	representation of system;	
B	Z transform, sine and cosine Fourier series, Fourier	CO2 & CO6
	Transform and DFT	
C	Walsh functions, digital filters, windows and windowing.	CO2 & CO6
Unit 3	Digital Relaying for Generator	
A	Various protection functions: differential, stator earth fault,	CO3 & CO6
	loss of excitation and reverse power protection	
B	Abnormal frequency and voltage protection: over and under	CO3 & CO6
	frequency protection, over and under voltage	
C	protection	
	Numerical differential protection of generator	CO3 & CO6
Unit 4	Digital Relaying for Transformer	
A	Types of faults encountered in transformer, basic	CO4
	considerations for transformer differential protection,	
B	stabilizing of differential protection during magnetizing inrush current	CO4
C	Numerical protection of transformer	CO4
Unit 5	Artificial Intelligence Based Numerical Protection	CO5
A	Types of Neural Network Models, Artificial Neural	CO5
_	Network, Design Procedure and Consideration	
<mark>B</mark>	Application of ANN to transmission line protection	CO5
C	ANN based power transformer protection

5	Course Objective	Learn modern numerical techniques and analytical method with and solving operation and protection related probled power systems	-
6	Course Outcomes	 After the completion of course student will be able to CO1: explore the concept of automatic generation control. CO2: apply the modes of excitation systems and exercises control. CO3: employ incremental cost curve and penalty factor for operation. CO4: plan unit commitment for optimal operation. CO5: evaluate power system security and methods of impri CO6: compare the protection techniques used for protection power system components 	voltage or economic rovement.
7	Course Description	This course aims to convince the student that constancy of voltage are the primary health indicator of the power maintaining the real and reactive power balance in systems of economic load dispatch and unit commitment are also course. The concept of close coordination between there power plant to meet the load demand has been included in t	er system for 5. The concepts 50 given in the mal and hydro

1	Course Code	EEE448						
2	Course Title	PLC and SCADA						
3	Credits	3						
4	Contact Hours (L-T-P)	3-0-0						
	Course Status							
5	Course Objective	To provide students with: 1. The conceptual as well as practical knowledge of the Industrial Automation & latest technologies being used to achieve Industrial Automation.						
6	Course Outcomes	 The students should be able to CO1: understand the concepts of computer based Industrial Control, including PLC, DCS and SCADA. CO2: understand hardware of PLC and ladder programming for PLC CO3: use various PLC functions and develop PLC programs for 						
		 industrial control and automation applications. CO4: understand the purpose, layout, components and functions of SCADA systems and use the knowledge for the operation of SCADA systems in Industry CO5.design SCADA system including layout, communication system and software. CO 6: Industrial experiences in PLC and SCADA. 						
7	Course Description	This course is aimed at equipping students with appropriate knowledge skills required in configuring, programming and operating Industrial automation systems with the use of Industrial Field Instruments, PLC and SCADA systems.						
8	Outline syllabus		CO Mapping					
	Unit 1	Computer Based Industrial Control						
	A	Microprocessor/microcontroller based industrial controller: concept and configuration	CO1					
	В	Computer based industrial controller: concept and configuration	CO1					
	С	Introduction to direct digital control (DDC), distributed control system (DCS) and supervisory control and data acquisition (SCADA)	CO1					
	Unit 2	PLC Basics						
	A	Introduction to PLC, PLC versus microprocessor/microcontroller/computer; Advantages and disadvantages of PLC	CO2					
	В	Hardware, internal architecture and physical forms of PLC; Digital inputs/ outputs; Analog inputs/ outputs	CO3					

				Beyond		
С		ists, Sequential	programming, function blocks, function chart, mnemonic	CO2		
Unit 3	PLC Function					
А	Registers: holding, input and output registers; Timers and timer functions; Counters and counter functionsData handling functions; Bit functions;					
В						
С	Advanced fu functions	CO4				
Unit 4	SCADA Basic	s, Layout and	Functions			
A	A Introduction; Definition and purpose; Controlled / uncontrolled variables and remotely / locally controlled objects in controlled plant B Layout and parts of SCADA system; Detailed block schematic of SCADA system C Functions of SCADA system: data acquisition and transmission, monitoring, control, data collection and storage, data processing and calculation, report generation					
В						
С						
Unit 5	SCADA Desi					
A	Master Terminal Unit (MTU): functions, single processor and multiprocessor MTU, single and dual computer configurations of MTU; Remote Terminal Unit (RTU): functions, architecture / layout; RTU programming					
В	MTU-RTU o communicat	CO5,CO6				
С	Design of SC Software.	CO5,CO6

5	Course Objective	 Introduction to the various models of Virtual Instruments, their comparison with traditional instruments and major application areas of VI. Introduction to basics of LabVIEW VI Programming techniques like loops, arrays, clusters, plotting and Strings and files. Basics of signal conditioning techniques along with DAQ hardware and software and various signal processing techniques available in LABVIEW. Advanced concepts in LabVIEW with main concepts of real time applications in Image acquisition and Motion control. Building of Virtual Instruments with various types of controls and indicators. Configuring DAQ card and acquisition of real time signals from sources and sensors. Simulate a signal in LabVIEW and generate a virtual source using DAQ cards.
6	Course Outcomes	 CO1: Understand various models and areas of application of Virtual Instrumentation. CO2: Understand various components of LabVIEW required for the development of VI. CO3: Understand and apply various programming functions of LabVIEW like loops, arrays, clusters and file I/Os for building of simple Virtual instruments. CO4: Understand the concepts of Data acquisition hardware and software and to apply basic signal processing techniques available in LabVIEW. CO5: Understand the real time applications of LabVIEW in motion control and Image acquisition.
7	Course	CO6: Able to build VI for simulated and real time applications.
1	Description	The course content of this subject includes an introduction to graphical

		to LabVIEW g language .In ttc. have been n this course. ques are also on control and orated in this							
8	Outline syllabus								
	Unit 1	Introduction	Mapping CO1						
	A	Graphical system design model - design model, prototype model, deployment model							
	В	Building blocks of VI; Virtual instrument versus traditional instrument, Hardware and software in VI							
	С	Graphical system Design using LabVIEW; Graphical programming and Textual programming							
	Unit 2	Graphical system Design using LabVIEW	CO2,CO6						
	A	Advantages of LabVIEW; Components of VI Software - Front panel windows, Block diagram windows, Icon /connector pane							
	В	Creating and saving a VI; Toolbars, Palettes, Front panel controls and indicators, Block diagram – terminals, nodes, functions							
	С	Sub VIs, Express VIs and VIs, wires; Data types, Data flow program							
	Unit 3	Programming Techniques	CO3,CO6						
	А	Modular Programming in Lab View; Building VI front panel and block diagram							
	В	Loops – for and while loops, Local and Global variables in LabVIEW, Arrays in LabVIEW,							
	C	Clusters in LabVIEW; Conversion between arrays and clusters, Plotting data in LabVIEW, Strings and File I/O in LabVIEW							
	Unit 4	Data Acquisition and Signal Processing in LabVIEW	CO4,CO6						
	А	Transducers and Signal conditioning ,sampling and aliasing							
	В	Basics of DAQ hardware and software, DAQ modules and drivers for building virtual instruments							
	C	Fourier transforms; Power spectrum, Correlation methods; Windowing & filtering							
	Unit 5	Advanced concepts in LabVIEW	CO5, CO6						
	Α	Data Socket, TCP/IP VI's synchronization							
	В	Serial interface buses - RS 232, RS485,USB							
	С	Concepts of real time systems; Image acquisition; Motion control							
	Mode of examination	Theory/Jury/Practical/Viva
